Honolulu, Hawaii 96813

Dear Mr. Lee:

Re: Mayor Wright Housing - Redevelopment
TMK: 1-7-029:003

This is in response to your request for a "Will Serve" letter for the above project location.

We have an existing distribution circuit on Pua Lane that could be used to serve your initial Phase 1/1A development. However, to feed your future Phase 2 and beyond, new circuits will need to be installed. These future circuits are being proposed to emanate from our Iwilei 25kv substation located along Kuwili Street. Please keep in mind that new electrical infrastructure (ductline/manholes) will need to be constructed to extend these circuits from Iwilei substation to the project site.

Please let us know if we can be of assistance in any other way. Should you have any questions, please call me at 543-7590.

Sincerely,

Eric Shimono
Sr. Engineer
Planning & Design Division
Customer Installation Dept.

1 Introduction

1.1 Purpose of this Report

This report is intended as an appendix to the Environmental Impact Statement for Redevelopment of Mayor Wright Homes (MWH). A socio-economic impact assessment provides information about existing conditions and the likely impacts of a proposed action. It is written to provide stakeholders and decision-makers with information needed to consider the proposed action.

The report is based on research conducted in 2016 and 2017. Community and resident meetings were held throughout the master plan process which informed the residents about redevelopment plans and provided them an opportunity to raise their concerns. These meetings spanned over a year from May 2016 to June 2017. Belt Collins Hawaii (BCH) staff attended a Community Advisory Committee meeting and a public meeting at MWH in June 2017. Interviews were held with selected persons who could provide information about the surrounding community and the process of renovation or redevelopment of public housing on O'ahu. In addition, a Human Capital report for MWH prepared as part of the Master Plan process was reviewed.[1]

1.2 The Proposed Redevelopment

1.2.1 Mayor Wright Homes

Mayor Wright Homes (or Housing) is a public housing complex developed by the State of Hawai'i public housing agency in 1952.[2] It includes 364 units in low-rise structures on approximately 15 acres of land owned by the State of Hawai'i. It has been administered by the State's housing agency since it was built. While there have been extensive renovations, maintenance problems have been serious in this aging complex, and the Hawai'i Public Housing Authority (HPHA) has considered redevelopment of the site for a decade or more.

1.2.2 Private-Public Partnership

Redevelopment will involve a greater commitment of funds than HPHA alone can raise. It also offers the opportunity to consider a mixed-use and mixed-income project instead of one consisting solely of low-income housing. HPHA has entered into a preliminary master development agreement with the Hunt Companies (Hunt) to redevelop MWH as a mixed-income, mixed-use development to be managed by Hunt. The redeveloped MWH could include up to 2,500 housing units, including the one-for-one replacement of the 364 public housing units now on site. Commercial development would focus on the needs of the immediate neighborhood and could include up to 80,000 SF. In this analysis, these maximum figures are used to estimate potential impacts.

1.2.3 Phasing and Relocation

Redevelopment will involve demolition of existing structures and construction of the new project. It will be done in phases. Current plans call for five phases over about ten years, starting in 2019.

The transition plan is still being developed but several options are being considered including relocation to other sites or in Section 8 rentals. To minimize displacement, another option would be to move existing residents into new housing at MWH as the redevelopment is built. All tenants in good standing will have the first right to return to new public housing units in MWH as the redevelopment is completed if they desire.

Hunt plans to include housing for several income levels in each phase, but may be subject to financing and market forces. Figure 1-1 is a preliminary plan for the development.

1.3 Summary of Impact Analysis

The major social impact of the project is the provision of much needed new rental housing for low- and moderate-income households in urban O'ahu.

The redevelopment will bring complex changes at MWH. Residents of MWH will need to move from their homes to other housing units, either off-site or in new MWH blocks. Construction can cause temporary environmental impacts and disruption. The project population will increase, and will include a mix of income levels. MWH will be a much denser development but will come to consist entirely of new housing units. It will also be a mix of lower-rise buildings along the surrounding streets and up to four taller structures. Structured parking will be located internally to the blocks with the lower-rise buildings wrapped around the parking areas.

After redevelopment, the project's 2,500 units will have a population of approximately 7,300 persons. Construction will generate a total of approximately 9,275 jobs over ten years (i.e., about 928 jobs each year, on average) throughout the economy. On site jobs, including management and other commercial employment such as retail, office and service jobs, would grow to some 380 direct jobs, an increase of 354 over the current level.[3]

[1] Concordia. *Human Capital Report: Mayor Wright Homes*. 2016.

[2] The Hawai'i Public Housing Authority (HPHA) has undergone re-organization over the years. From 1935 to 1998, it was the Hawai'i Housing Authority; from 1998 to 2005, development and management responsibilities were combined in a single agency, the Housing and Community Development Corporation of Hawai'i. The Housing Finance Development Corporation was separated out in 2005, leaving HPHA as the agency managing state and federal low income housing and associated programs, such as the Section 8 voucher program. HPHA was responsible for homeless service programs as well until 2006, when these were transferred to the Department of Human Services.

[3] Population and employment ratios used to generate these estimates are shown in Sections 3.2 and 3.3.

Figure 1-1: Preliminary Plan for Mayor Wright Homes

The project brings a significant increase in population to an area that has seen little change in recent years. It replaces a deteriorated public housing project with a new mixed-income, mixed use development. It is likely to attract young, moderate-income residents from nearby communities, in search of affordable homes near the urban center. With a community center and commercial area on-site, the new MWH will provide greater amenities, as well as much better housing, than the current housing complex.

Fiscal impacts of the project include taxes on workers' incomes and spending, along with corporate income taxes on construction. School impact fees could be a large share of the State's revenues associated with construction (up to $20 million of $63.6 million over the ten-year development period.)[4] City and County of Honolulu (City) revenues would derive from real property taxes on the commercial area in the project and from the City's share of General Excise Tax, and could amount to approximately $3.4 million over the development period.

HPHA and Hunt have taken steps that will avoid tensions that have arisen in mixed-income projects on the Mainland U.S.[5]: public housing units will be replaced one for one based on the number of bedrooms in the existing units; residents in good standing are promised a right of return; units at different rent levels will be integrated as much as possible into the new blocks; and all units will be rentals.

Management of a complex redevelopment project demands continuing communication with residents and the surrounding community to avoid misunderstandings and promote cooperation. Respectful, continuing communication will help to minimize adverse social impacts of redevelopment.

In sum, the redevelopment would involve significant social impacts, both by adding new units to the supply of rental housing and by a process that will involve stress for MWH residents but offer new housing by the end of the redevelopment period.

[4] All monetary values are in constant 2017 dollars, i.e., do not include inflation. They are based on current tax and fee structures.

[5] Mainland cases are cited and discussed in Section 3.5 of this report.

2 The Socio-Economic Context

2.1 Public Housing in Honolulu

The history of public housing development in Honolulu began with crises. In 1900, a fire in Chinatown displaced many residents and brought attention to living conditions of the poorest urban residents. After the fire, the Kalihi-Pālama area emerged as the area with the largest concentration of poor residents.

The U.S. government was a major provider of housing for military personnel, beginning well before World War II. After the attack on Pearl Harbor, housing was needed for shipyard workers and as emergency housing in case of any further Japanese attack on O'ahu. Notably, Pālolo Valley was used for emergency housing. After the war, much of the land occupied by wartime quarters was then used for the Pālolo Homes and Pālolo Valley Homes projects built by the Hawai'i Housing Authority in 1957.

State and federal funding made it possible for the Hawai'i Housing Authority to develop over 1,750 family housing units by the end of the 1950s.[6] In Honolulu, housing projects were concentrated in Kalihi/Palama. (Figure 2-1 shows major HPHA family housing sites in Honolulu.) Urban redevelopment nearer Downtown Honolulu was largely accomplished with a combination of federal, State, City and private initiatives, with the resulting projects owned by private developers.[7]

In later decades, federal funding for low-income housing development was reduced. Funding for the upkeep of existing projects operated by HPHA continued. However, some HPHA projects had been built with State funds, not federal ones, and HPHA lacked resources to rehabilitate these. In Pālolo Valley, the project built with federal funds remains a HPHA property, while Pālolo Homes was transferred to Mutual Housing, a non-profit that could seek federal and charitable funding for renovation. New subsidized housing is now largely supported by Low Income Housing Tax Credits, administered in Hawai'i by the State's Housing Finance and Development Corporation. These funding streams bring together federal and State support with private for-profit and non-profit developers. Local government policies supporting inclusionary development have spurred developers to use such credits.

[6] Hawai'i Public Housing Authority, *Annual Report, Fiscal Year 2015-2016.* Posted at http://www.hpha.hawaii.gov/reportsstudies/reports/2016%20HPHA%20Annual%20Report.pdf, viewed April 2017.

[7] Government funding supporting low-income housing by private developers typically has stipulated a period in which rents must stay at low to moderate levels, after which the property owner could raise rents or convert the property to condominiums. In Honolulu, this issue became critical at Kukui Gardens, across from MWH, around 2010. The owner was willing to sell the project to a for-profit developer. A collaborative effort involving the State's Housing Finance and Development Corporation resulted in much of Kukui Gardens being renovated, but still rented at subsidized levels, while the remaining section, now Waena, is rented at market rates. On the issue of "preserving" affordable housing, see A. von Hoffman, "To Preserve Affordable Housing in the United States: A Policy History." Working Paper, Joint Center for Housing Studies of Harvard University. 2016. Posted at http://www.jchs.harvard.edu/sites/jchs.harvard.edu/files/von_hoffman_to_preserve_affordable_housing_april16.pdf

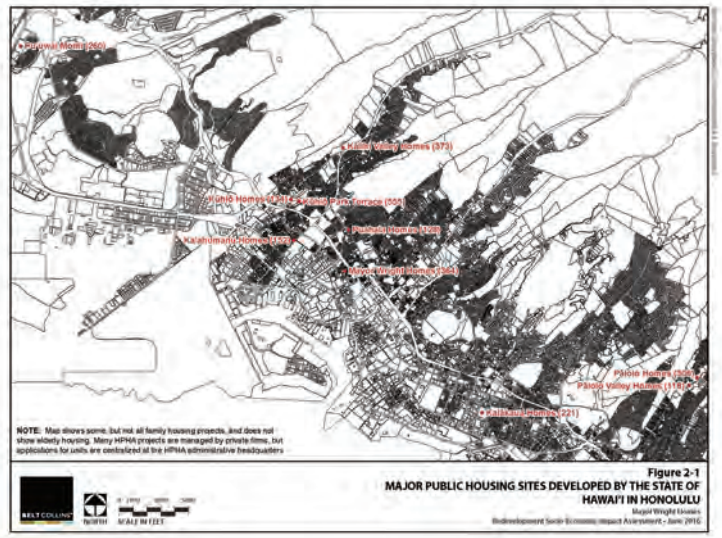

Figure 2-1
MAJOR PUBLIC HOUSING SITES DEVELOPED BY THE STATE OF HAWAI'I IN HONOLULU

The City has also developed public housing, mainly in Chinatown, east of Kalihi-Pālama. The City, like HPHA, can administer Housing Choice ("Section 8") vouchers, but does not have a unified housing office. Instead, private management firms work with applicants and residents in each building. Some non-profit developers and the State's Housing Finance and Development Corporation have developed new units for low-income households in recent years, but for families with incomes higher than the limit for public housing.

2.2 The Kalihi-Pālama Neighborhood

The *Kalihi-Pālama Action Plan* describes the neighborhood as follows:

> *Kalihi-Pālama is a diverse community with a variety of cultures and economic activities. A very high percentage of the population is of Asian ancestry compared to the rest of O'ahu and the State, and many are foreign born. The area is generally characterized by stable, single-family, residential neighborhoods. Economically, Kalihi-Pālama contains a large industrial area, Honolulu Harbor, and many small businesses. Institutionally, the area has three hospitals, the Oahu Community Correctional Center, and the Honolulu Community College, as well as public and private schools. Significantly, approximately 50% of Oahu's public housing stock is located in Kalihi-Pālama.*[8]

Major employment centers for Honolulu before World War II were the canneries in 'Iwilei and the harbor, as well as Pearl Harbor shipyard. Kalihi-Pālama was filled with housing for the working population. Chinatown and Kalihi-Pālama also served as points of entry for immigrants and migrants from plantation areas to the urban center.

Nowadays, Kalihi-Pālama contains a mix of housing and commercial activities. Many of the roads in the area are much more narrow than in areas built to current codes. Housing varies greatly in age and condition. In addition to the public housing complexes shown in Figure 2-2, other low- and mid-rise projects initially developed with federal urban renewal funds and owned by private parties extend from MWH towards the Honolulu Downtown area. Commercial activity includes not only neighborhood stores but also large retail outlets – Costco, Home Depot, Lowe's and Best Buy – in Iwilei. Kalihi-Pālama is easily accessible by the H-1 Freeway and is on major bus routes, while Downtown and Chinatown markets are in walking distance.

The Walk Score® methodology characterizes the MWH area as "very walkable," with a score of 89 of a possible 100, with "excellent transit" (76) in an area that is "bikeable" (57). The lower bike score is due to the lack of bike lanes on nearby streets.[9]

2.2.1 Mayor Wright Homes since 2000

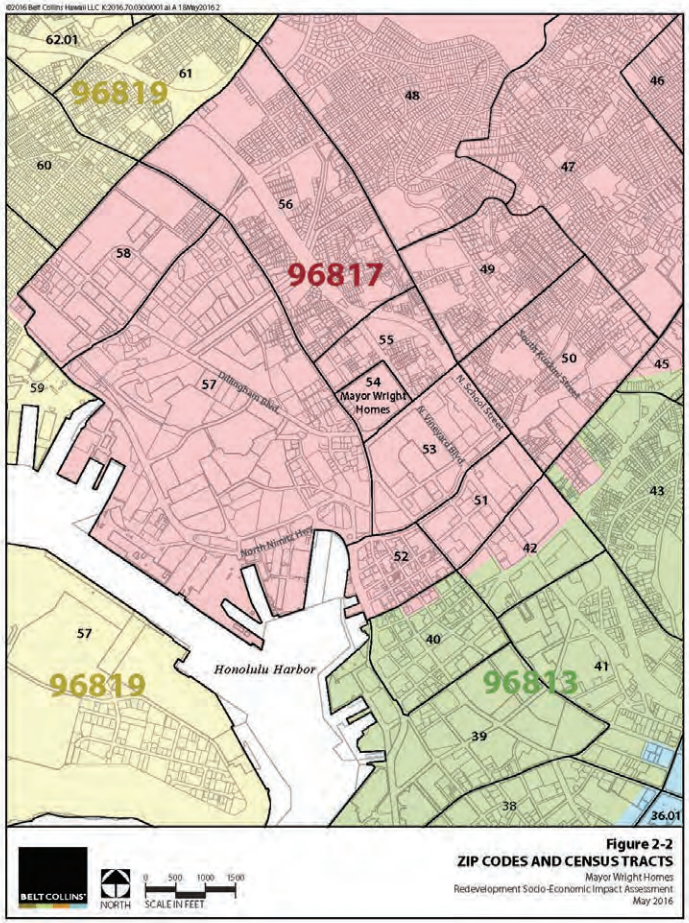
When the Weed and Seed program was introduced, public housing residents responded by forming Neighborhood Watch groups. More recently, residents have welcomed curfews on vehicles driven by non-residents.

Over the years, maintenance problems at MWH became serious and widespread.[10] Residents lacked hot water for months at a time, and sued for improved maintenance. In addition, MWH lacks Americans with Disabilities Act compliant units. The suit was settled in 2015 and repairs have been made. HPHA administration and staff report that conditions have significantly improved, and the project is 99% occupied.

2.2.2 Demographics

The American Community Survey (ACS) is conducted annually. Unlike the decennial Census, it reaches only a sample of the population. Annual and five-year data are released. The five-year data – recently, for 2010 through 2014 – are based on data from about 15 percent of the households in any area for which data are reported. For Kalihi-Pālama and MWH, ACS data provide a more recent demographic snapshot than the 2010 Census. Figure 2-2 shows the Census Tracts (CT) surrounding MWH and much of the 96817 Zip Code area.

[10] HHF Planners, *Hawai'i Public Housing Authority, Physical Needs Assessment, Mayor Wright Homes, Honolulu, O'ahu, AMP 32, HPHA No. 1003.* Prepared for Hawai'i Public Housing Authority. Honolulu, 2013.



NOTE: The 96817 Zip Code area extends inland to the Koʻolau mountain ridge; ʻĀlewa Heights and the Kamehameha Schools campus are included in the ZCTA but not shown here.

Tables 2-2 to 2-7 provide characteristics of the social conditions in Pālama and in MWH. Major points that emerge from the data include:

For MWH (CT 54)

- The population was young (median age of 20.7 years);
- The bulk of the population (74.1 percent) were Native Hawaiians or other Pacific Islanders;
- Households were usually large (3.92 persons per household);
- All residents were in rental housing;
- Unemployment was high (17.7 percent);
- More than half the people lived on incomes below the poverty level; three-quarters of the young people lived in poverty; and
- Of the senior population, two-thirds were physically disabled.

For the 96817 Zip Code Tabulation Area *(ZCTA)*

- The population amounted to 5.7 percent of the City and County total;
- The population was relatively old (with a median age of 44.4 years, compared to 37.2 years for the entire City population);
- Most of the population (76.8 percent) was identified as Asian;
- While half the population was Hawaiʻi-born, over a third were foreign born;
- The average household size (2.82 persons per household) was below the island average (3.03), and well below the MWH average (3.92);
- More than half the households were renters; and
- While unemployment was low, the incidence of poverty (16.0 percent of the population) was much higher than for the island as a whole (9.8 percent).

65 years and over	144,552	11,308	778	118	258	216
With a disability	33.8%	34.5%	35.7%	66.1%	14.0%	19.9%

The U.S. Census approaches "race" in terms of a few categories, and then treats finer distinctions of ethnicity as "ancestry." From the 2014 Five-Year ACS, more information is available about ancestry for people who only reported themselves as of one "race." (See Table 2.7.) Among Asians, Vietnamese (with 6.2 percent of the population) form the largest group in MWH. Among the Pacific islanders, some 14.3 percent of the total population are identified as Samoan but nearly half of the total population is simply classified as "Other Pacific Islander." The Census counts various Micronesian ancestries, but does not show them in a profile for these Census Tracts.

In the 2010 Census, the MWH population included 1,637 persons, of whom 812 were Native Hawaiians or other Pacific Islanders. Some 606 of these were identified as Micronesian, in 98 housing units (with an average household size of 6.17 persons/household).[11]

[11] The 2010 Census count also included 139 Chuukese in 22 units in Census Tract 54. It is not clear whether these were also included in the "Micronesian" group. Information for Marshallese or Kosraeans was not available, since these groups did not have 100 persons in the Census Tract.

Table 2-8: Ancestry, from 2014 Five-Year ACS

2.2.3 Economic Census Data

The Census Bureau publishes annual business and payroll data by zip code. These can be further broken out by industry and size of establishment.[12] A total of 27,950 workers were counted in establishments in this ZCTA. That number is just below the number of persons employed at establishments in the area. About a quarter of these were employed in establishments with 25 to 49 employees; nearly the same number were in the next two larger classes (50 to 99 and 100 to 249 employees).

As of 2013, the most common businesses in the area were in health care followed by retail trade. About 5,500 jobs in the area were in health care. Three establishments employed 250 or more persons in 2013.

[12] An establishment can be a firm or a separate local division of a larger firm. Typically, agencies and firms with statewide administration do not break out employment by actual place of work, so this analysis likely undercounts total employment in the area.

Table 2.9: Establishments by Industry, 2013, for ZCTA 96817

	Establishments		
	Number	*Share*	*Industry Share of Workforce*
Agriculture	9	0%	0%
Construction	122	7%	6%
Manufacturing	86	5%	7%
Wholesale trade	160	9%	8%
Retail trade	245	13%	12%
Transportation and warehousing	30	2%	4%
Information	36	2%	2%

Accommodation and food services	201	11%	12%
Other services (except public administration)	192	11%	5%
Industries not classified	1	0%	0%
	1815	100%	100%

NOTE: Workforce data are presented for ranges (establishments with 1-4 employees, 5-9 employees, etc.). The number of workers in each industry is estimated here using the midpoints of these ranges.
SOURCE: U.S. Census (www.census.gov)

Over the ten-year period from 2004 to 2013, the local workforce and salaries in the ZCTA have declined:

Figure 2-3: Total Employment and Average Annual Pay, ZCTA 96817

2.2.4 Community Resources and Organizations

Kalihi-Pālama has several well-established community organizations and service providers:

- Pālama Settlement was founded near the MWH site, but then moved to its current site at Pālama and Vineyard Streets. It has provided youth services for decades, notably athletic programs that support academic participation. Senior programs are held on week days. Other community services include monthly food bank distributions at MWH and after school and pre-Kindergarten programs at Pālama Settlement. Pālama Settlement also hosts an alternative education program for high-school age youth.

- Pacific Gateway Center provides services to the immigrant communities in the area, including help with immigration processing and other permits, language classes, translation services, and economic development activities, including job training, microloans, and a certified kitchen incubator.

- Churches have played an important role in supporting Pālama's people. Near MWH, Kaumukapili Church and St. Elizabeth's Episcopal Church have long been involved in community outreach activities. St. Elizabeth's and Aldersgate Methodist (on Liliha Street, next to MWH) are members of Faith Action for Community Equity (FACE), which has advocated for public housing residents and for homeless and low-income residents. FACE sponsored a detailed assessment of deteriorated physical conditions at MWH.[13]

  At present, St. Elizabeth's serves as home to We Are Oceania, a one-stop service provider for Micronesians. MWH is in the parish of the Co-Cathedral of St. Theresa on School Street, and many residents are parishioners.

- Community Health Centers include Kalihi-Pālama Health Center (KPHC), located at King Street and Kohou Street, with outreach services in 'Iwilei in Downtown Honolulu, and Kōkua Kalihi Valley, located near Kūhiō Park Terrace (KPT). KPHC is currently planning a new central facility across Pua Lane from MWH.

- Additional service providers include the Kalihi-Pālama Young Men's Christian Association (YMCA), the Susannah Wesley Center, and Parents and Children Together (PACT). PACT is based at KPT, where it has youth, family and economic development programs, along with both Early Head Start and Head Start programs. PACT also runs domestic violence prevention and treatment centers, along with sites for non-custodial parents' visits with their children.

[13] *Mayor Wright Housing Tenants Needs Assessment. Honolulu, 2011.* Posted at http://facehawaii.org/issues/affordable-housing/housing-documents/.

MWH is within the McKinley High School catchment area. McKinley and Central Middle School enrollments have declined in recent decades. The elementary schools surrounding MWH are Likelike, Ka'iulani, and Kauluwelu. All of these are in the McKinley catchment area.

The Kalihi-Pālama Neighborhood Board (Number 15) is an elected citizen body, providing a forum for community engagement with various state and county agencies. Neighborhood Boards have advisory functions, notably in relation to development projects seeking City and County permits. The Kalihi-Pālama Neighborhood Board meets monthly. Initial plans for the MWH Redevelopment were presented to the Board in April 2016 with subsequent updates in May and October 2016. The Liliha / Puunui / 'Ālewa / Kamehameha Heights Neighborhood Board (Number 14) was also briefed in May 2016.

Ad hoc groups of local stakeholders have been involved in community planning initiatives. Local residents provided input for transit-oriented development planning from 2011 to 2014. Future use of the O'ahu Community Correctional Center site has also been considered by local political representatives and presented to interested community participants.

MWH had an active resident board for many years, that sponsored events for the resident community. The board was disbanded, and no replacement board was formed.

2.3 Trends Affecting the Community

2.3.1 Housing Supply and Demand on O'ahu

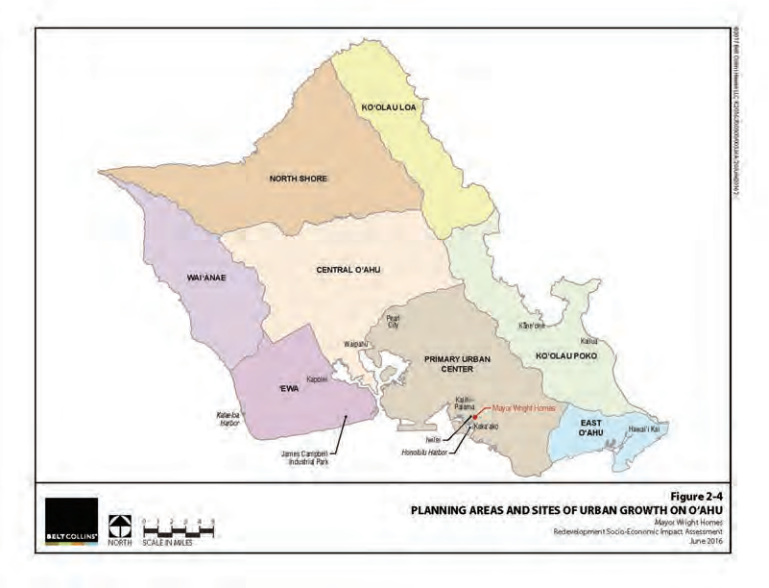
In the late 1950s and 1960s, concentrated development of low-income housing and rental housing occurred in the Honolulu urban area. The federal loan programs that supported dense urban housing development by both local government and private developers were reduced and replaced by the mid-1970s by block grants to local governments.

Single family development occurred in areas such as Kailua, Hawai'i Kai and Pearl City, where residents could buy homes and lots but commute to town for work. By the mid-1970s, planners recognized that the spread of housing on O'ahu, combined with the concentration of employment in the Honolulu/Pearl Harbor area, could best be managed by encouraging industrial, commercial and residential growth in West O'ahu. Kapolei was identified as "the Second City," with the James Campbell Industrial Park and Kalaeloa Harbor areas as industrial sites. Development of both heavy and light industrial areas outside Honolulu followed; residential development came after 1990 and spread throughout the 'Ewa plain. (See Figure 2-4).

Housing demand has also been shaped by a trend towards smaller household sizes. The average household in Hawai'i in 1950 included 4.14 persons; by 2010, the average household consisted of 2.89 persons.[14]

[14] The most comprehensive source for housing trends is the SMS housing planning study. The most recent update is SMS Research & Marketing Services, Inc. *Hawaii Housing Planning Study, 2016.*Prepared for the Hawai'i Housing Finance and Development Corporation. Honolulu, HI, 2016. Posted at https://dbedt.hawaii.gov/hhfdc/files/2017/03/State_HHPS2016_Report_031317_final.pdf

With a limited land area and continuing demand, housing prices have risen over time. O‘ahu has experienced affordable housing crises in every decade since the 1950s. Development of demand for second homes has added to the crisis, since developers and builders can achieve greater profits by providing luxury housing, rather than homes for moderate- or low-income residents. High-rise urban redevelopment in Honolulu has been focused in Kaka‘ako. (Less expensive housing has also been built in that area, largely as a condition of permits for the luxury towers.)[15]



Allocating the State’s projections for the City, the Department of Planning and Permitting anticipates that the Primary Urban Center will have some 467,000 residents by 2040, compared

[15] Housing development in Kaka‘ako is subject to rules for Reserved Housing (including low- and moderate-income households with incomes up to 140 percent of the Area Median Income (AMI)). Under these rules, promulgated by the Hawai‘i Community Development Authority (HCDA), a total of 6,260 housing units had been built in Kaka‘ako from 1976 to late 2014, of which 1,898 were Reserved Housing. Projects under construction by the end of that period included 2,074 Reserved units, 48 percent of the total under construction. *HCDA Reserved Housing Committee Report: We Must Be a Part of the Solution (POTS)*. 2014. Posted at http://dbedt.hawaii.gov/hcda/files/2014/10/UPDATED-Reserved-Housing-Report-111014.pdf

with the 2010 population of the Primary Urban Center, 435,118.[16] The average annual population growth rate for the area from 2010 to 2040 is 0.2 percent – much smaller than the 1.8 percent growth rate projected for ‘Ewa, and below the 0.4 percent rate for the City as a whole.

Since 2000, the housing supply on O‘ahu has grown by nearly 2,000 units annually, at a rate of 0.56 percent per year.[17]

Analysts have attempted to project housing demand and supply for different income segments. A recent study highlights “needed housing units” – ones that would not be built if current and anticipated production trends continue.[18] For O‘ahu, a gap of 10,226 units is projected between 2016 and 2020. The projected demand by income category is shown in Table 2-10. The share of needed units for families with low to moderate incomes is clearly high; 69 percent would be for households with incomes of 120 percent of the area median or less.

The City is encouraging development of rental housing through a draft affordable housing policy and an initiative to allow additional dwelling units (ADUs) on existing lots. Currently, some City fees are being waived for development of ADUs.[19]

Table 2-10: Projected Units Needed in Addition to Likely Supply by Income Level, City and County of Honolulu, 2016-2020

	Income level (in relation to Area Median Income)								
	Less than 30%	30% to 50%	50% to 60%	60% to 80%	80% to 120%	120% to 140%	140% to 180%	Over 180%	Total
City and County of Honolulu	1,734	1,381	714	1,737	1,439	1,761	530	931	10,226

2.3.2 Commercial Redevelopment in Iwilei

In recent years, large stores have been built in ‘Iwilei, replacing canneries, warehouses and other industrial facilities. Home Depot and Costco are both located on Ala Kawa Street, and Best Buy

[16] Department of Planning and Permitting, City and County of Honolulu. *Annual Report on the Status of Land Use on O‘ahu, Fiscal Year 2014*.Honolulu, HI. June 2016. Posted at http://www.honoluludpp.org/Portals/0/pdfs/planning/dpar2/DPAR2014.pdf; Viewed April 2017.

[17] Housing units on O‘ahu, July 1, 2000 to July 1, 2015: total change = 27,741 units, or 1,849 units annually. DBEDT, *State of Hawai‘i Data Book 2015*, Table 21.20.

[19] Current proposals are listed at the Mayor’s affordable housing website, http://www.honolulu.gov/housing/resources-on-affordable-housing.html

and Lowe's are nearby. These bring customers along Dillingham Boulevard and Nimitz Highway to this area. Smaller stores are located next to the parking lot for Costco, and Dole Cannery Center is also next to that lot.

2.3.3 The Rail Project and Transit-Oriented Development

The Honolulu High Capacity Transit Project has been under way for years, and is now projected to be fully in service in 2025.[20] Limited service between Kapolei and Aloha Stadium could be available in late 2020.

The 'Iwilei station will be located near MWH. Current forecasts call for daily ridership on the system of approximately 120,000 persons. Of those, approximately 1,200 would board and 1,500 would get off the trains at that station daily in 2030.[21] One reason why ridership at this station is modest is that nearly all riders are expected to arrive on foot. (Bus traffic and auto drop-off links would be concentrated at Pearl Highland and the system's eastern terminus, Ala Moana.)

With the planned 'Iwilei station, MWH residents will be able to reach work or college locations easily by rail as well as by bus. Travel to Aloha Stadium for sports events will also be convenient.

2.3.4 Other New Development

Honolulu Community College, located on Dillingham Boulevard about 0.3 miles from MWH, has plans for eventual growth.[22] Expansion could help to attract or retain some residents of the surrounding area. With a doubling of its current enrollment, new parking structures could be built at either end of the campus. (The one on Akepo Lane and Dillingham Boulevard would be close to the 'Iwilei rail station.) The plan is intended to provide for change over a 25-year period. The Dillingham parking structure and other structures at the northeast end of the campus are the final phase of the planned campus.

Another major Kalihi facility is the O'ahu Community Correctional Center. OCCC serves as the Honolulu county jail. It was renovated in 1975, with a design capacity of 628 beds. It currently has some 950 beds and houses approximately 1,200 inmates[23]. Its 16-acre campus is located on Dillingham Boulevard and Nimitz Highway, about 1.4 miles southwest of MWH.

[20] Honolulu Authority for Rapid Transportation (HART). *Recovery Plan.* Submitted to Federal Transit Administration April 2017. Posted at http://hartdocs.honolulu.gov/docushare/dsweb/Get/Document-20510/20170428-hart-recovery-plan.pdf. The Recovery Plan does not resolve the outstanding issue of funding.

[21] *Ibid.*, Estimated from Exhibits I-2 and I-3.

[23] Hawaii Department of Public Safety. *Annual Report 2015.* Posted at https://dps.hawaii.gov/wp-content/uploads/2016/12/PSD-ANNUAL-REPORT-2015.pdf.

Four sites, including the OCCC campus, are being considered for a facility to replace the current low-rise facility. In a ranking system shared with the public in April 2017, the Animal Quarantine site in Hālawa Valley received the highest score (79 points), and is hence the leading contender. However, the OCCC campus had a score of 76 points.[24] If the current campus is selected, a new facility would occupy only about half the site. The site selection process is ongoing.

2.4 Community Concerns

2.4.1 Themes in Recent Community Planning

Broad community concerns were enunciated in the Kalihi-Pālama Action Plan and in interviews held for transit-oriented development planning.

The Kalihi-Pālama Action Plan was developed in 2004 with support from the City and a local "Vision Group" of stakeholders.[25] The process was intended to elicit a vision for the community from local stakeholders and a list of projects to help to implement that vision. The first project was for beautification of King Street. Since that project would use up available funds for several years, the Action Plan was developed to identify needs and opportunities that could be addressed in the future.

A list of values shared by the resident stakeholders expressed both pride and aspirations:

- We value the beauty, history, and cultural diversity of Kalihi.
- We seek a future community that is more livable and enjoyable.
- We are an economically vibrant community... now and in the future.
- We value education as the means to sustain the future of our community.
- We value recreational opportunities within our community.
- The health, safety, and welfare of our community are fundamental to Kalihi's future.
- We treasure our elders and have much to learn from them.
- We are a diverse community with a broad spectrum of housing needs.
- We cherish the natural beauty of our mountains, valleys, streams, waterways, and waterfront, seeking to preserve and enhance their future.
- We treasure our youth and are dedicated to helping them create a bright future.
- We are a community, which values working together.

The plan also identifies many opportunities for beautification, redevelopment of roadways, potential reuse of sites such as the OCCC land, and a proposal for a Community Development Corporation to co-ordinate local initiatives.

[24] Powerpoint for public meeting, posted at https://dps.hawaii.gov/wp-content/uploads/2017/04/Town-Hall-Presentation_17_0424.pdf.

[25] Townscape, Inc. *Kalihi-Palama Action Plan.* Honolulu, 2004. Posted at http://www.honoluludpp.org/Portals/0/pdfs/planning/SpecialAreaPlans/KPAP(2004).pdf.

A Kalihi Community Survey was sent to residents living near the planned Middle Street, Kalihi, and Kapālama transit stations, and over a thousand responses were received in 2011 for the City's Neighborhood TOD Plan.[26] Respondents appreciated their communities' convenience and affordability, and recognized the presence of schools and libraries. They expressed concern with crime, the condition of sidewalks and roadways, and lack of parking. Good quality affordable housing was seen as lacking.

Responses to a similar survey for the Downtown stations – including the 'Iwilei station near MWH – placed more emphasis on the homeless population and the limited availability of usable park space as problems.[27] In both areas, respondents expressed regret over the absence of "family entertainment," such as movie theaters.

2.4.2 Views Expressed in Neighborhood Board Meetings

In the minutes of the Kalihi-Pālama Neighborhood Board (the Board) for the period from January 2016 to April 2017, the Board received information about ongoing and planned infrastructure projects. Residents, including Board members, raised concerns about the condition of streets and sidewalks, activities at "gaming rooms" where police intervention was wanted, and the homeless population. They were concerned that Kalihi-Pālama could become the relocation site for homeless from the rest of urban Honolulu. Reports on the rail project were met with questions about future construction noise and dust. Residents expressed interest in redevelopment of the OCCC site for the Kalihi-Pālama community.

2.4.3 Planning for Renovation and Redevelopment of Mayor Wright Homes

Over several years, MWH residents, along with their lawyers and other advocates, pressed HPHA for action to address extensive maintenance problems at MWH. A document attesting to the deteriorated conditions provided a view of MWH as a struggling community:[28]

> Mayor Wright Housing is an aging complex with real repair and social issues that nevertheless serves as the housing of last resort for over 300 of O'ahu's low-income families. Sadly the outside image of the complex is shaped by news coverage of negative events like the recent stabbing. However a closer look into the place shows a tightly knit community of people struggling to make ends meet. Lavish individual gardens, resident repair of their own units and programs like Weed and Seed are the other side of the Mayor Wright story and demonstrate the power of the residents to make things better. (p. iv)

Much has been done to address the physical conditions at MWH, and residents may view HPHA more positively than in 2011. At the community meetings for the proposed redevelopment in 2016 and 2017, residents' ideas for the new MWH dealt with spaces, uses and the relocation process, not management. A few noted that on-site employment for residents was valuable.

Resident comments from the first community meeting emphasized the need for safety for residents, especially children. Other themes mentioned by more than one resident included the aim of developing a "real community" with a range of activities and services for residents, play space for children, and parking for residents and their visitors.

HPHA and Hunt have stated repeatedly that all residents in good standing would be able to relocate in the new MWH and that all 364 public housing units will be replaced one-for-one based on the number of bedrooms in the existing units. Residents have continued to want to know more about the relocation process, but appear, at least in meetings to date, to accept that the relocation process could be fair and result in desirable outcomes over time.

3 Impacts of the MWH Redevelopment Project

3.1 Introduction

Some immediate impacts of the MWH redevelopment are clear:

- The existing MWH will be demolished over a period of about ten years;
- New buildings will take their place;
- Residents will move from their current units, with many – probably most – able to move to new units in the new MWH buildings;
- The new MWH will include more units – a total of approximately 2,500 units, for an increase of approximately 2,136 units – which will be in good condition;
- MWH will become a mixed-income housing area managed by a private party; and
- A new community center and commercial areas will be developed.

Redevelopment of public housing as mixed-income development on this scale has not been accomplished in Hawai'i. One current project, at Kūhiō Park Terrace (now The Towers at Kūhiō Park), involves a similar public-private collaboration, extensive renovations, and limited inclusion of market units in a public housing site, but not the extensive redevelopment planned for MWH.[29]

This chapter begins with quantifiable impacts anticipated for the MWH redevelopment. Demographic and economic impacts are estimated. Social impacts are discussed after a summary account of academic and planning literature on mixed-income communities, which provides a basis for finding some anticipated impacts more likely than others for residents and the Kalihi-Pālama community. Management of uncertainty and potentially adverse impacts is discussed in the conclusion.

Quantifiable changes point to impacts of different sorts, depending on the level of impact analysis. Population and housing impacts can be seen in relation to the site, where the redevelopment will bring more people than those who live there now, or in relation to the neighborhood, island and state. At the level of the site, the impact is the increase in the number of residents, and social diversity due to inclusion of mixed-income housing. At the neighborhood level, it is likely that many new residents of MWH will come from the Kalihi-Pālama area, where they are living with family or in less desirable housing. Consequently, while the project will add some 2,136 units at MWH over time, the number of new households in the community – MWH plus the surrounding area -- will likely be smaller. Finally, MWH is not expected to attract people to O'ahu and Hawai'i: at the island and state levels, no population impact is anticipated.

3.2 Population and Housing

As shown in Table 3-1, the MWH population would grow from about 1,400 to approximately 7,300 over the ten years of the redevelopment process. With the completion of the first phase (shown as in 2020), the population in the new structures would be approximately 1,760 persons,

[29] Further redevelopment is planned but has not occurred yet.

while the population remaining in existing structures would amount to about 1,035. By the end of the redevelopment process, approximately 1,427 persons would be in public housing units in the new structures under HPHA rules for public housing rentals, while 5,871 persons - about 80 percent of the on-site resident population - would be in other units (from Section 8 rentals to market rentals).

While the actual figures will depend on design issues that are not yet final, it is clear that the mix of new and old residents, and the mix of public housing vs. other residents would change greatly once the first phase of the redeveloped MWH opens, and this change would continue.

The redevelopment schedule used here was adapted by BCH from preliminary accounts by Hunt and should be taken as provisional. Timing and phasing could change, depending on regulatory and market factors, and the number of units will depend on financing. A total of 2,500 units is shown in this analysis and up to 80,000 gross square feet of commercial space is projected; the quantitative analysis is of a maximal development.

3.3 Employment and Wages

The redevelopment will bring three sorts of jobs to the MWH site: construction, facility management and maintenance, and commercial jobs. Table 3-2 shows jobs of all three types. All jobs are estimated as full-time. Construction jobs include jobs at construction offices and yards since not all construction jobs are on-site. Construction jobs are estimated on the basis of construction spending. For management, calculations deal with the on-site workforce needed to operate MWH, including contractors who may be present either full-time or at intervals. Social service and commercial jobs on-site are estimated from the square footage available for their activities. These jobs will be with firms and agencies that lease space within MWH.

Table 3-2 shows direct jobs. On-site operations employment will grow to approximately 380 jobs by 2027, more than ten times the number currently employed at MWH. The increase in annual wages on-site will be approximately $10.7 million (in constant dollars, controlling for inflation). These jobs and wages are expected to continue for many years. Construction employment will vary from year to year, since the phases of redevelopment involve areas of different sizes, and will end in 2027. Direct construction jobs are labelled as "person-years" because these are not positions that continue from year to year.

Expenditure of funds for redevelopment and operations at MWH will lead to further local spending. Indirect jobs are created when firms purchase materials; induced jobs are created as the workers in direct and indirect jobs spend their wages in the local economy. These can be estimated from the model of input-output relations by industry in the Hawai'i economy that has been developed and refined by the DBEDT. Table 3-3 shows the estimated direct, indirect and induced jobs associated with the redevelopment process.[30]

[30] Direct and indirect jobs are easily associated with a particular year when direct spending occurs. Induced jobs associated with that spending may actually occur later, since workers may spend their wages over time.

Table 3-1: Potential Phasing of Redevelopment at MWH

	2017	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028
Housing Units											
In Existing Structures	364	264	264	164	164	104	104	44	44	-	-
In New Structures			650	650	1,250	1,250	1,700	1,700	2,300	2,300	2,500
TOTAL	364	264	914	814	1,414	1,354	1,804	1,744	2,344	2,300	2,500
Population											
In Existing Structures	1,427	1,035	1,035	643	643	408	408	172	172	-	-
In New Structures			1,760	1,760	3,480	3,480	4,850	4,850	6,479	6,479	7,298
TOTAL	1,427	1,035	2,795	2,403	4,123	3,888	5,257	5,022	6,651	6,479	7,298

NOTES: Phasing estimated by Belt Collins Hawaii LLC, based on presentations by the Hunt team. All estimates are provisional; redevelopment plans will change as the project design proceeds. For this calculation, BCH has assumed maximal residential development (2,500 units) and one-for-one replacement of public housing.
Population per household in public housing based on recent average household size in CT 54 (3.92 persons/unit) and, for other units, average household size for subsidized units is based on market study finding of household sizes, rentals, with incomes from 40% to 80% of area median (2.79 persons/household) ; for market units, average size of rentals with 100% of area median (2.81) used.

NOTES: Job counts are estimated here by BCH, drawing on information from Hawai'i Public Housing Authority, the Hunt Companies, and Indigo Real Estate Services, and on ratios for retail and construction jobs. Retail jobs are estimated as averaging 4 per 1,000 interior square feet of commercial space. Construction job counts are estimated from the ratio of construction industry jobs to the annual value of construction completed in Hawai'i, for 2015 and 2016. The ratio is 4.56 jobs per million in construction costs. Commercial space is anticipated to be built in Phases 1 and 4, and 85% to 90% occupied (with higher occupancy along King and Liliha Streets) after a first year of operations.

(1) Only HPHA employees and subcontractors on-site are counted, although both office and maintenance personnel based at HPHA headquarters may work in support of MWH operations. Similarly, on-site operations by a managing firm and subcontractors are estimated, without counting off-site office staff. Wages estimated by BCH using the same procedures as for later jobs at MWH.

(2) Wages are estimated from average occupational wages in the Honolulu Metropolitan Statistical Area as of May 2016, inflated in line with the Consumer Price Index to 2017 values. Wages for future years are shown in constant 2017 dollars.

3.4 Fiscal Impacts

Government revenues and costs associated with the redevelopment consist of:

- Taxes on construction;
- Taxes on operations;
- Fees associated with the leasing of government property to a private developer, and with rental of housing units at subsidized rates; and
- Impact fees meant to cover part of the costs to government following development of new housing.

Fiscal impacts occur when a project adds to revenues or to costs for local government. Construction involves the expenditure of capital to create the new development. Because it demands an input of capital to Hawai'i, taxes associated with construction all count as fiscal impacts. It is likely that no excise tax would be charged for construction at MWH, because excise taxes are waived for housing projects with a significant share of units rented to low-income households.[31] However, corporate income taxes and taxes on workers' income and spending are not waived.

Operations create new revenue streams, but may not involve new impacts, since the population being served is not new to the City and State. Also, the property will remain low-income housing on State land, and will largely not be subject to real property taxes (ROH Article 10, Section 8.10.20). The exception is the commercial space. Since this is being leased by a for-profit firm, it is likely to be taxable under Honolulu regulations.

Fees for the lease of the MWH property are part of negotiations between Hunt and HPHA. Hunt is acquiring control of a large urban property, but is committed by agreement with HPHA to produce, lease and operate rental housing, mostly at rent levels below market. The terms of the lease agreement are not final and not part of the public record at this time, so these cannot be included in the fiscal impact calculations.

The Hawai'i State Legislature authorized the Board of Education to establish impact fees for areas where new development created demand for new school facilities in Act 245 of the 2007 Session. The Board has established impact fees for new development in the Kalihi to Ala Moana transit corridor. These cover fees in lieu of land plus 10 percent of the cost of construction of new schools. In the urban Honolulu corridor, land costs are high, so the fee in lieu of land is high: $8,790 per new unit. The estimated fee for construction is $584 per new unit.[32] The actual fees charged per new unit could change, either because new schools are placed on smaller sites or because of changes in construction costs. Again, bills have been introduced in the State

[31] A bill passed by the 2017 Legislature, HB 1179, caps the amount of excise taxes that can be exempted for construction of affordable housing at seven million dollars annually. Should several projects be undertaken at the same time, this cap, if it became law, could affect the timing of project construction.

[32] Hawai'i Board of Education, "Draft Analysis of the Kalihi to Ala Moana School Impact Fee District." Posted at http://www.hawaiipublicschools.org/DOE%20Forms/Facilities/Final%20corrected%20TOC%201-21-16.pdf .

Legislature to exempt affordable housing from these impact fees, but such bills have not passed to date.

Table 3-4 shows the fiscal impacts that can be calculated as discussed here. Over the ten-year redevelopment period, the total new revenue for the State of Hawai'i is estimated as amounting to approximately $63.6 million. In that time, the City would gain approximately $3.4 million. All the State taxes shown are tied to redevelopment, and would not continue after project buildout. The City and County real property tax revenues would continue afterwards, but not the excise tax revenue, which would end along with construction.

Table 3-4: Fiscal Impacts of MWH Redevelopment

All values are 1,000s of constant dollars	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028
Associated with Construction										
Excise Tax on Construction	-	-	-	-	-	-	-	-	-	-
Corporate Income Tax	$215	$178	$202	$164	$146	$123	$187	$164	$71	$55
Personal Income Tax	$4,004	$3,305	$3,750	$3,051	$2,708	$2,288	$3,470	$3,051	$1,324	$1,017
Excise Tax on Workers' Expenditures	$2,241	$1,850	$2,099	$1,708	$1,515	$1,281	$1,942	$1,708	$741	$569
School Impact Fees		$4,687		$4,687		$3,656		$4,593		$2,400
Real Property Tax on Commercial Area			$209	$209	$209	$209	$209	$271	$271	$271
Annual Revenues										
State of Hawai'i	$6,236	$9,835	$5,840	$9,439	$4,217	$7,220	$5,405	$9,345	$2,063	$3,984
City and County of Honolulu	$224	$185	$419	$380	$361	$337	$403	$442	$345	$328

NOTES: All values are $1,000 of 2017 constant dollars. Taxes calculated from historical ratios:

- Corporate Income Tax: .0017% of gross revenues (year 2002 ratio, Class C construction corporations)
- Personal Income Tax: 5.1% of workforce income, based on year 2014 data. Personal income for direct, indirect and induced workers included in the calculations.
- Excise tax: 4.5% of total cost, with 4% to the State general fund plus 0.5% to cover costs for the Department of Taxation; 0.45% to City and County of Honolulu. No excise tax on construction of a project that qualifies as low income housing.
- Share of personal income subject to excise tax: 66% (based on 2014 data on consumer expenditures).
- School impact fees are for new housing units. The above calculation uses the rates adopted by the Board of Education for both land and school construction ($9,374 per unit), and compares the total unit count at MWH to the existing 364 units. New fees are estimated when unit counts grow over the level used for earlier impact fee calculations.

3.5 Mixed-Income Redevelopment of Public Housing

Mixed-income developments in the United States vary greatly[33]. Some include a wide range of incomes and housing types, bringing public housing tenants, renters of other subsidized units, market renters and owners of market condos together in a single place. Income integration may be "seamless," with no distinction in appearance between lower and higher rental units or, when different income levels are placed in different buildings, only a matter of co-location in the same overall project. In many cases, low- and moderate-income tenants of subsidized units occupy nearly all the units. The MWH project will include rentals at affordability levels from low-income subsidized housing and affordable rentals to market rate units. Since the land remains State property, no residents can be owner-occupants.

Planners and social scientists have investigated mixed-income projects, especially HOPE VI developments funded by the federal Department of Housing and Urban Development (HUD) until 2010.[34] (HUD has more recently supported the Choice Neighborhoods program. The Towers at Kūhiō Park in Kalihi is a Choice Neighborhood redevelopment.) Research questions often stemmed from research on urban poverty, and tested the assumption that locating lower and higher income residents in the same project or neighborhood would have beneficial effects for the lower income residents or for both.

The research tends to indicate that local impacts of redevelopment are due to a mix of factors, notably:

- Above all, new housing in good condition is a real benefit, and promotes residents' well-being.
- With new housing and new management can come crime reduction, to the relief of all involved.
- People interact and develop social bonds due to shared experiences and lifestyle, not just by living near each other;

[33] On the range of "mixed" income properties, see Vale, L. and S. Shamsuddin. "All Mixed Up: Making sense of mixed-income housing developments." *Journal of the American Planning Association,* 83:1, pp. 56-67. 2017. DOI: 10.1080/01944363.2016.1248475.

[34] Insightful analyses of impacts of mixed-income housing on residents and communities in the Mainland US include Levy, D., Z. McDade and K. Dumlao, "Effects from Living in Mixed-Income Communities for Low-Income Families: A review of the literature. Prepared for the Urban Institute Posted at http://www.urban.org/sites/default/files/publication/27116/412292-Effects-from-Living-in-Mixed-Income-Communities-for-Low-Income-Families.PDF National Initiative on Mixed-Income Communities "State of the Field Scan #1, Social Dynamics in Mixed-Income Developments." Cleveland, OH., 2013. Posted at http://nimc.case.edu/wp-content/uploads/2015/08/State-of-the-Field-Scan-1_Social-Dynamics-in-Mixed-Income-Developments.pdf

A useful guide to management measures for social life in mixed-income projects is *Shelterforce*, "Making Mixed-Income Communities Work." National Housing Institute.2016. Posted at /Making%20Mixed-Income%20Developments%20Work%20--%20Shelterforce%20--%20National%20Housing%20Institute.htm. See also McCormick, N. and S. Voelker, "the New Public Housing Stigma in Mixed-Income Developments." Research Brief #8, University of Chicago School of Social Service Administration and Case Western Reserve University Mandel School of Applied Social Sciences. Posted at http://ssascholars.uchicago.edu/mixed-income-development-study

  - Interactions of neighbors from different income levels are often shallow, involving brief greetings and little more;
  - Where different groups are in the same housing project, space for people to meet is necessary but not sufficient to foster relationships;
  - People who have been in a project for much the same time may share experiences;
  - Children can create links between households of different backgrounds; and
  - Shared interests such as gardening in a community garden plot can foster interaction – but such resources may also be treated as belonging to one resident sub-group rather than all residents, and become a focus for intergroup tensions.
- Low income residents may find that others look down on them, or blame them for the problems of the neighborhood.
- Low income residents may find management and regulations to be strict, and feel that managers want them out of the project.
- Competing interest groups may form as income level is translated into housing tenure – e.g., condo owners in some projects, or public housing tenants' groups in others – that compete for resources. In such cases, populations in the middle may have little voice in the community.

3.6 Social Patterns and Impacts at MWH

Mainland U.S. experience can help to anticipate social impacts of redevelopment at MWH, but some of those impacts will be distinct, due to conditions in Hawai'i, the history of MWH, and decisions taken by HPHA and Hunt. First, the MWH project avoids the major pitfall of many of the Hope VI program: projects funded by that program often failed to build public housing in numbers comparable to the ones demolished.[35] The project combines a commitment to one-on-one replacement of the MWH public housing stock with plans for a large share of other affordable units. Next, a major factor separating the MWH project from most Mainland projects is that all units will be rentals. Residents of market units will not be homeowners.

Tenants at different income levels will live in the same blocks or towers, reducing separation and differentiation of tenant sub-groups. Public housing residents, along with Section 8 residents, will still need to be qualified by HPHA staff, but management of the project will be by private parties, and will affect all sub-groups.

Resident/Management Communications. The residents' association at MWH has been dissolved, and few lines of communication exist among tenants, or between tenants and management. With redevelopment, new associations can be formed. It will be in the interests of both management and residents to maintain strong and open communications and share an understanding of the redevelopment process as orderly and as operating to the eventual benefit of all involved.

[35] T. Gress, cited in J. Schenke, "Is HUD's $6B Mixed-Income Housing Strategy To Blame For Housing Shortage?" *Bisnow,* 2017. Posted at https://www.bisnow.com/national/news/construction-development/huds-funding-faces-uncertainty-for-mixed-income-players-71491.

In some Mainland cases, new management of mixed income housing was felt by very low income residents to be more demanding and suspicious of residents than the earlier public housing management. [36]

Once the Master Development Agreement is in place, the private developer team will take over management, and will work with HPHA to relocate residents. Most residents of the Phase 1 area will be displaced from MWH, since there are few vacant units in the project. If relocation efforts result in placing displaced tenants in appropriate units elsewhere, this first phase could help to build confidence and trust in the private development team.

Some residents have expressed concern with noise, dirt and dangers associated with construction in MWH. All of these will be controlled through contractors' following State and County regulations and Best Management Practices. MWH management and residents nearby are likely to watch the construction process closely and to report impacts on residents. Still, construction may temporarily inconvenience residents and could result in complaints to management.

Mix of Residents. During the process of redevelopment, the number and mix of residents will change greatly. After the first units are demolished, the on-site population will decline. However, as the new Phase 1 block is opened, resident numbers will increase, and a mix of income levels will be present at MWH. Public housing tenants will form a minority of the population.

About a third of the units are expected to be rented at market rates. In Kalihi/Pālama, these could be close to, or the same as rates for workforce housing. Workforce and market renters will have a wider range of housing options than low-income renters, and may view MWH as a stage in their housing trajectory, from apartments to townhouses, and from rentals to home ownership. Many will be young adults, expecting to move elsewhere as their families grow and their assets increase. These residents may consequently have little commitment to MWH.

Children and Youth. Many residents hope to see more space for children's play in the complex. The redeveloped MWH will have new park areas and, possibly, on-site providers of after-school programs and social services. The area for youth activities on-site will be limited by the small area of the complex. However, with co-ordination between on-site service providers and off-site centers such as Pālama Settlement and the increase in the number of residents, recruitment of MWH for off-site programs could increase.

Youth programs on-site will help to provide safe activities for after-school hours. With retail jobs in the project, some teenagers will be able to find employment and incomes that are not available to them now.

Crime Prevention and Environmental Design. In recent years, public housing residents have largely seen fences and security patrols as the major means to reduce crime and find peace and quiet in their projects. The MWH redevelopment will have more points of entry than the current

[36] McCormick, N. and S. Voelker, "The New Public Housing Stigma in Mixed-Income Developments." Research Brief #8, University of Chicago School of Social Service Administration and Case Western Reserve University Mandel School of Applied Social Sciences. Posted at http://ssascholars.uchicago.edu/mixed-income-development-study

project. The Hunt team has mentioned crime prevention through environmental design as a component of project design, and has emphasized the importance of community "eyes on the street" to reduce crime. Management may rely on cameras as well as patrolling officers to achieve security. Since the major factors associated with safety in residents' eyes are being changed, the redeveloped project may appear less safe to residents than the current one.

Displacement and Relocation. Since the project involves replacement of all housing in MWH, all residents will be displaced from their current units. Some will be displaced from MWH until a MWH unit is available for them in the course of redevelopment, while others will be able to move from existing MWH units to new units built on-site.

Residents have expressed concern about displacement. Some are worried about relocation away from the immediate area and their social ties, or to other projects in Kalihi such as KPT, since youth from these projects and youth from MWH have been in conflict at times.

When the first phase of the new MWH opens, both displaced residents and residents who will be displaced by the next phase will seek units in the new block. The Hunt team may want to plan on allocating space for both groups in the first new block. In later phases, the construction of new units will likely allow many households to relocate on-site.

In Hope VI projects, return rates have varied from 45 percent (in projects with awards before 1996) to 6 percent in some of the most recent projects.[37] Displaced residents from Chicago redevelopment projects have expressed a range of views. Some treasure their neighborhood and social ties, and want to stay; others may view the project as a site to be escaped, even though the new mixed-income development will in better condition. Many felt that they had not been provided enough information to be able to return. [38]

Hunt and HPHA plan to provide MWH residents with information about the redevelopment throughout the process.

The planned multi-phase development of MWH will allow many residents to move from units about to be demolished into new units within the complex. However, by the end of the redevelopment process, some of these tenants may leave the public housing units at MWH for one reason or another. It seems reasonable to expect that not all the public housing units in the redeveloped MWH will be taken by returnees. Meanwhile, other returnees may move into units at MWH for other income categories.

Increased Appeal of MWH for Residents and Neighbors. Currently, residents of MWH and nearby apartment complexes have few interactions. Each group tends to view resources located at their own project (e.g., playground equipment) as being built for that project's residents, not

[37] Gress, T., S. Cho and M. Joseph. "Hope VI Data Compilation and Analysis." National Initiative on Mixed-Income Communities. 2016.. Posted at https://www.huduser.gov/portal/publications/HOPE-VI-Data-Compilation-and-Analysis.html.

[38] Joseph, M. and R. Chaskin. "Why Do So Few Residents Return to Mixed-Income Development Projects? Insights into Resident Decision-Making." Research Brief #6, University of Chicago School of Social Service Administration and Case Western Reserve University Mandel School of Applied Social Sciences. Posted at http://ssascholars.uchicago.edu/mixed-income-development-study.

others. Redevelopment at MWH will include commercial spaces open to the wider community. Retail tenants will need to serve a larger population rather than only project residents. The proposed community center will serve MWH residents, but could also be used for outreach to others in the community. Social service agencies based in the new center will, like the new businesses located at MWH, have reason to make their area appealing to a larger market than project residents alone.

The location of MWH – near the urban center and easily accessible by bus or rail transport – seems likely to attract residents who value the convenience of living at the site. Many may rely on walking and bicycling on a daily basis. However, the MWH site is also convenient to "big box" stores in Iwilei and to the H-1 highway.

3.7 Changes in the Surrounding Community

A traffic study has been conducted for the redevelopment project.[39] It shows existing conditions at nearby intersections – King and Liliha/Dillingham, and Vineyard/Liliha-- to be congested at present. Even if the project is not built, these intersections would function poorly, at Levels of Service E or F by 2022. The intersection of Vineyard and A'ala Street would be at Level of Service E without the project by 2028. In other words, the MWH redevelopment will be part of a cumulative trend towards congestion at these locations. Due to the limited right of way and high traffic volumes at the King/Liliha/Dillingham intersection, the proposed mitigations address pedestrian safety, rather than vehicle movement.

New pedestrian and bicycle routes will support residents and neighbors using alternative modes of transportation. The commercial area along Liliha may attract some pedestrians, especially ones returning from the transit station to the south or busses along King Street.

At Community Advisory Committee meetings, local service providers have shown interest in serving the increased population at MWH and in locating services at the planned community center. Redevelopment could also make off-site facilities more accessible, since the new design will encourage access to King Street and Vineyard Boulevard as well as Liliha Street. Leaders of both Pālama Settlement and Kalihi-Pālama Health Center have discussed the redevelopment as providing their organizations with an opportunity to reach new clients and to plan for growth of their own facilities.

School principals have been open to cooperation with the developer to minimize disruption for their students. Relocation poses one set of problems: whether to keep students in the same school if their families move to other sites. Since much of HPHA's housing resources is in Kalihi, relocation may only be over short distances. However, MWH is served by the McKinley High School sub-district, and the rest of the HPHA projects are in areas served by Farrington High School and its feeder schools. When families are relocated, it may be physically possible for students to stay in their original schools, but this would mean that students would not attend

[39] Fehr and Peers *Draft Traffic Impact Assessment Report, Mayor Wright Homes Redevelopment.* San Diego: CA 2017.

schools with their new neighbors. School placement may be one of the most difficult factors in relocation.

The increase in the number of units at MWH would create a different set of challenges. The middle and high schools serving MWH can absorb population growth. Both Central Middle School and McKinley High School have enrollments well below their historical peak numbers. The elementary schools near MWH may have less flexibility and space to accommodate new students. If the new households at MWH add large numbers of students to the local schools, as seems likely, the elementary schools will be far over capacity. The school impact fees estimated in Table 3-4 will also be the subject of negotiations between the developer and the Department of Education.

MWH's location near Honolulu Community College and the transit station may make units in the new blocks appealing to college students. However, the O'ahu community colleges are typically commuter schools, with many part-time students. This group may not form a significant part of the MWH population.

3.8 Social Impacts at the Island and State Levels

The redevelopment of MWH will increase the supply of rental housing on O'ahu by approximately 2,000 units. That increase is a significant response to the ongoing imbalance between housing demand and the supply provided by developers, and government agencies. While the increase depends on tools such as Low Income Housing Tax Credits that have been available for some time, it stands out as a potential example demonstrating that a public-private partnership can produce new low- and moderate-income rental housing despite Hawai'i's high construction costs.

A potential drawback to successful development of subsidized housing must be recognized. Developers are already competing for a limited pool of tax credits and funds to support new and renovated housing projects. If that pool does not expand, redevelopment of MWH and Kūhiō Park Terrace could result in less funding being available for other low-income housing projects throughout the state.

3.9 Environmental Justice

The idea of environmental justice has emerged from a mandate directing federal agencies to avoid actions that would direct adverse environmental impacts to poor and minority communities rather than affluent, influential and majority ones (in President Clinton's Executive Order 12898 of 1994). The general ethical concept, that the burden of development should not be borne disproportionately by marginalized groups, has been widely recognized.

The median household incomes in Table 2-3 show all sections of the 96817 area as having lower incomes than the City as a whole. Again, the incidence of poverty is much higher in the 96817 area, and highest in the MWH census tract (Table 2-6).

In Hawai‘i, nearly all communities are racially mixed, and no group can be identified as the local “majority.” (See the first column of Table 2-8 for O‘ahu data.) Nonetheless, MWH stands out as an area where Pacific Islanders, especially Micronesians, are concentrated. As the most recent migrant group in Hawai‘i, many Micronesians are poor, with limited employment, and often suffering from major health problems.[40]

MWH and its surrounding area qualify for consideration with regard to environmental justice as a low-income area with a distinctive minority population. Significant questions would arise if the proposed action had a negative impact on the local community while benefitting others. However, the project’s impact on the site and its surrounding is above all the provision of new affordable rental housing in a mixed-income setting. That impact is positive. The project has been planned to benefit MWH residents, and they have been consulted in the design of the new MWH. Consequently, the project follows environmental justice guidance to avoid disproportionate adverse impacts to minority and low-income communities.

3.10 Managing and Mitigating Impacts of Redevelopment

3.10.1 Resources for Mayor Wright Homes Residents

Social impacts depend on the situation and perspectives of those involved. No single mitigation measure or strategy can be guaranteed to mitigate social problems. A major element in mitigation processes is communication, so that all parties involved understand each other’s aims and needs, and processes such as relocation occur with limited distress for those involved. On the other hand, communication must be clear and backed by commitment: public housing residents in mixed-income projects often report that developers did not carry through on their promises. Members of the development team have recognized that it will be especially important for the relocation process to proceed without major misunderstandings or failures to find safe and appropriate homes for those who leave MWH. This will help build trust and support stronger relationships moving forward as they will also be managing the project once construction is completed.

The MWH redevelopment has drawn on resident and community input. The development team’s planning reports emphasize the importance of communication. The team can build on residents’ hopes for a new and improved home and for a voice in community planning. Continuing communication and establishment of a resident board that is seen to be respected by the developer may be effective.

Sponsorship of community activities and events may help to rekindle the sense of community that some MWH residents say has been absent for several years. Over time, such events may help to bring together public housing residents and new residents.[41]

[40] Major reasons for emigration to Hawai‘i have been education, employment, and hospital care for older members of Micronesian families. Hezel, F.X. and M. J. Levin, *Survey of Federated States of Micronesia Migrants in the United States including Guam and the Commonwealth of Northern Mariana Islands (CNMI)*. 2012. Posted at https://prd.psc.isr.umich.edu/files/Resources_Report%20on%20PI%20Jurisdictions.pdf

[41] Managers of mixed-income communities may have more success with “events” that attract a range of residents than with “programs” that appear to address the needs of only the lowest-income residents.

To address residents’ concerns about crime, it will be important for residents to feel empowered to act as Neighborhood Watch participants and as observers of their neighborhood space who can help to keep it peaceful. Management can respond to such concerns through respectful collaboration with residents.

3.10.2 Resources in the Surrounding Community

Community agencies have already expressed willingness to work with the developer and residents through the redevelopment process. As noted earlier, collaboration with community agencies, the local schools, churches, and social service providers can go far to minimize disruption for the community and to build a supportive environment for MWH residents. One school principal has shared with the development team the fact that his school’s programs to involve parents in reading have already reached and recruited dozens of immigrant families in MWH. That principal offered to share news of the redevelopment through their communication channels. Consistent communication with and through community agencies will help to minimize social impacts of the redevelopment process.

HUMAN CAPITAL REPORT

MAYOR WRIGHT HOMES

November 7, 2016

concordia

EXECUTIVE SUMMARY

The Mayor Wright Homes (MWH) were built in 1952, long before federal housing programs encouraged mixed-income and holistic approaches to residential development. Redeveloping the Mayor Wright Homes provides an opportunity to fill in the numerous gaps in serving residents' needs left by the 1952 design.

The physical master planning process will lay crucial groundwork for building a healthy community--mixed-income and mixed-use development are important steps in the right direction. However, building mixed-use, mixed-income housing is not the be-all end-all. To ensure that Hunt's redevelopment is a holistic and transformative improvement for current MWH residents, a Human Capital Master Plan must be developed in tandem with the Physical Master Plan.

The purpose of a Human Capital Master Plan for the Mayor Wright Homes is twofold: 1) to lay out the necessary steps for a smooth relocation of current MWH residents during the construction phase; and 2) to catalogue and coordinate the services that MWH residents need in order to build a healthy community.

The Human Capital Report lays out the engagement and administrative processes that will lead to a robust Human Capital Master Plan. The Human Capital Report is structured in three parts. First, the report provides background information on current MWH residents and the assets and services currently available in the community.

Part Two of the report lays a basic framework for the Relocation Plan and presents the results of the resident and stakeholder engagement conducted during the Design Charrette process. The report recommends conducting interviews with at least one resident from every unit in the Mayor Wright Homes so residents' needs can be fully understood before relocation begins. The report also recommends phased construction so as to minimize off-site relocation, which is both more disruptive for residents and more costly for Hunt.

Part Three identifies a number of organizations who can take on roles in the development and implementation of a Human Capital Master Plan for the Mayor Wright Homes.

In summary, The Human Capital Report makes recommendations towards an equitable Relocation Plan and frames the redevelopment as an opportunity to overhaul the quality and coordination of services to MWH residents. Additionally, the report identifies the next steps that will turn its recommendations into a realized Human Capital Master Plan.

BACKGROUND

Mayor Wright Homes and the surrounding Kalihi neighborhood are poised for a comprehensive approach to transformation, where Hunt Development, local leaders, residents, schools, police, firefighters, business owners and nonprofits can all join together to create and implement a community-centered plan that can simultaneously address all of the site's robust challenges and opportunities.

Such an approach is already being implemented in several ways by the nearby Palama Settlement and at Kuhio Park Terrace, where programs have or are being designed to address a wide range of services aimed at improving the quality of life of each individual resident. To some degree, these services embrace the complex physical, cultural, social, economic, educational and organizational ecosystems that can also support the well being of whole neighborhoods.

In Hawai'i, this kind of sharing and interconnecting of resources was the driving force behind the ancient planning principles of the ahupua'a. Instead of segregating the resources available in the mountains, plains and beachfront sites, each community was provided with a pie shaped slice of land extending downward from the top of the mountain, through the rich farmland plains, and into the ocean. This meant that residents would have access to all of the resources needed to support a productive life, from trees and vegetation to mammals, reptiles and fisheries, and not just one or another.

In the planning and design of contemporary cities and neighborhoods, this kind of integrative thinking has begun to take hold in the form of mixed-use (commercial plus housing) and mixed-income developments. However, physical and economic diversity are only two of the many resources needed to create resilient and sustainable communities. This is especially true in complex inner city neighborhoods.

A strong alignment of all community resources can build critical human capital, improve social, organizational, educational, cultural and economic benefits, and generally improve the quality of life for all community stakeholders. And although each of these resources is most often viewed as a separate and distinct asset, it is often the interactions between all of them that can most effectively and efficiently improve the health and well being for both individuals and the whole community system.

A CRITICAL BALANCE

In order to make a successful transition to a new home in the Mayor Wright Homes redevelopment, existing residents will need a comprehensive and well-managed support system. This support system can be designed and implemented through a fully integrated Human Capital Master Plan that will work in tandem with the Physical Master Plan currently underway.

Pono is a native Hawaiian concept of balance, where the whole can be even greater than the sum of its individual parts. It can provide a center of strength or serve as a medium for "oho" or healing.

THE CURRENT LANDSCAPE

A small number of Hawai'i Public Housing Authority (HPHA) employees are now responsible for supporting three public housing sites, including Mayor Wright Homes, with more than 2,000 residents. Additional programs in the Kalihi neighborhood surrounding the site appear to be better staffed and funded, but changing demographics and other social and cultural issues are now challenging the capacity and effectiveness of these existing support systems and the services they provide.

For example, Earl Fusato, the new director of the Palama Settlement, indicated that a steady decline in clientele using Palama's programs and facilities has spurred some conversations by his board members about replacing the soccer field, or perhaps even the pool, with other uses, such as affordable housing. He indicated that one reason for the loss of clientele is that the neighborhood demographics have shifted, in some cases quite radically, and that current programs may not be aligned with the specific needs of newcomers from a wider range of Pacific Island cultures.

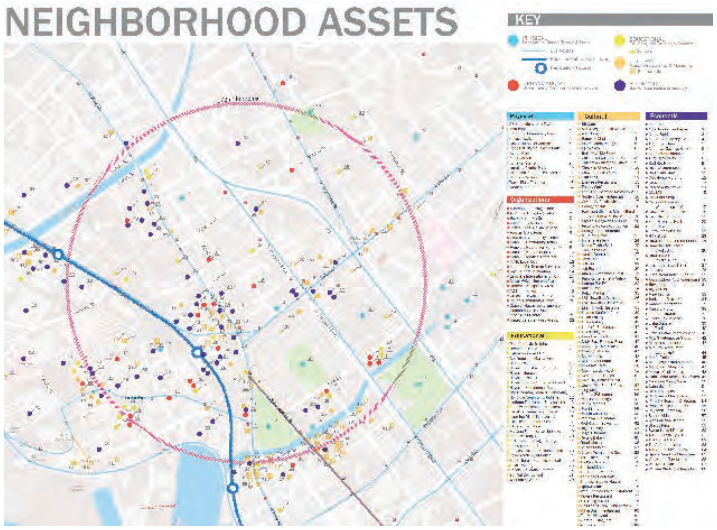
This changing neighborhood demographic was also confirmed by Kelly Bart, the principal of Likelike Elementary School, where he and his staff are constantly adapting to changing languages and cultural traditions that reflect an ever expanding diversity of students, parents and care givers.

Some of these challenges can be moderated through more communication, coordination and collaboration among the many dedicated service providers working in the neighborhood.

CURRENT ASSETS AND RESOURCES

The Hunt design team has initiated the development of an inventory of the many physical, cultural, social, economic, organizational and educational assets and resources that are already available to residents of Mayor Wright Homes. Ideally, this resource will be expanded into a more complete hard copy and also an interactive web-based tool to serve as a "resources road map" for all Mayor Wright Homes residents and Kalihi neighborhood stakeholders.

By far, the most important assets and resources at Mayor Wright Homes are the people who live there. In initial conversations with local residents we found an encouraging combination of strong will and personal passion among the residents who participated. Expanding the resident participation and aligning their passions with productive outcomes presents some important



opportunities to reinforce and greatly expand on an historical "aloha" spirit. To this end we have attempted to identify some initial projects and programs that could promote early wins between the Hunt design/development/construction team, HPHA and the current resident population. The most pressing of these is a plan for temporary relocation of residents during the construction phase of the work.

CURRENT DEMOGRAPHICS

Mayor Wright Homes demographic highlights (2014 American Community Survey):

- **MWH Total Population: 1,571 people**
- **47.2% are under the age of 20 years**
- **7.5% are 65 years and better**
- **74.1% identify as Native Hawaiian or Pacific Islanders**
- **26.0% identify as Asian**
- **42.1% were born in Hawai'i**
- **46.6% are foreign born**

RELOCATION PLAN & PROCESS

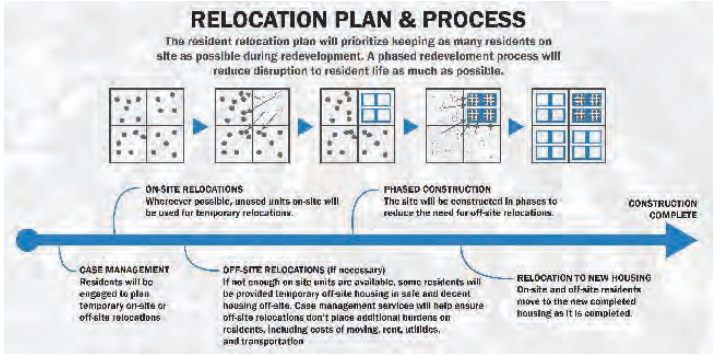
Each existing Mayor Wright Homes resident will go through what will probably be a complex transition to their new home. For some residents, one of the most difficult steps in this process will be a relocation plan. The relocation process outlined in more detail below, offers an opportunity to smooth this transition, in part by connecting those local organizations that have expressed an interest by participating in planning, with each resident and family unit in a focused and meaningful way.

This work will require interviews with each Mayor Wright Homes residential unit to understand their existing status, desired needs for their new residence, number and age of residents, school and work status, and other pertinent data listed below.

- Number and configuration of existing households
- Age range
- Status of parents (single/both parents/guardian)
- Income status
- Education level (adults and children)
- Where do children attend school
- Do parents/guardian attend school meetings, events
- Special education needs
- Daycare needs
- Employment data
- Disability
- Health issues (adults and children)
- Diet/Nutrition
- Transportation needs

This data will inform the relocation plan. In particular, it will aid Hunt in determining the best options for phasing construction so that relocation off site is minimal. It would be most advantageous if the majority of residents can be relocated on the existing site as this is less disruptive and less costly.

A comprehensive plan for relocation can also be shared in the interview, or alternatively in a subsequent meeting. This relocation plan will need to include a complete assessment of each resident's desired bedroom configuration and other needs. This initial data will be used to inform the comprehensive plan and phasing for relocation.



The Relocation Plan will need to include the following:

- Eligibility for Relocation Assistance and Benefits
- Ineligibility for Relocation Assistance
- Relocation Process
- Information Meetings
- Deliver letters/flyers inviting residents
- Detailed presentation to residents from Hunt representatives
- Scope of redevelopment
- Construction timing
- Relocation process, including notices
- Relocation payment and assistance
- Inventory of Characteristics and Needs of Households
- Overcoming Potential Impediments to Relocation
- Moving and Relocation Benefits
- Relocation Process by Phase
- Notices
- Recordkeeping
- Relocation Office and Staff
- Appeals

OTHER SHORT AND NEAR TERM OPPORTUNITIES

Through community meetings, meetings with the CAC and personal interactions, it is apparent that many residents are excited about the prospects of a renewed Mayor Wright Homes community, while others are anxious about the uncertain changes they are facing. To avoid future problems, it is important to engage and prepare all residents, as soon as possible, in a dialogue about their future in the Mayor Wright Homes redevelopment.

There are many organizations in and around the community that have been serving the needs of MWH residents for many years. Most of them see the new Mayor Wright Homes development as

an opportunity to improve the coordination of services and rethink how they can best support the resident community.

By engaging with residents, stakeholders, and nearby service providers, Hunt and its consulting team can strengthen current services, empower local entrepreneurs, support residents during disruption from the demolition and construction process and, in general, lay the groundwork for a thriving new Mayor Wright Homes community.

RESIDENT AND STAKEHOLDER ENGAGEMENT

During the Design Charrette process, meetings were held with key stakeholders to determine some of the strengths, weaknesses, opportunities and threats that might impact the immediate and future Mayor Wright Homes development. Following is a summary of these discussions:

INDIGO REAL ESTATE

The Halekauwila property, which contains 204 units and parking, is successful because Indigo makes sure the building is part of the surrounding community; for example, they participate in community watch and park cleaning, and the Kakaako Community Board meets with residents once a month. The people they service tend to be both older, younger, and includes lots of families. They suggest that for the larger units there should be a minimum of 4 people in 3 bedrooms (largest units). All units there are 60% AMI and everyone pays the same which will be different than Mayor Wright Homes, which will probably accommodate a broader range of income groups. When asked about elevators and children they said they don't have problems or maintenance issues.

Banyan Street Manor is another property with 55 units and parking. For added security, Indigo installed windows in the new management office, where everyone enters and exits, in addition to cameras with highly visible security monitors so people know that constant monitoring is happening. Banyan Street Manor has limited community space–essentially a loading zone with grass–that residents use for birthday parties and other family events. Indigo recommends planning for more community space ahead of time.

Indigo's other properties in Hawaii include the Lokahi Apartments–a three-story walk up with 306 units–and Franciscan Vistas Ewa, a 150-unit complex divided into 25 two-story buildings. The Franciscan Vistas Ewa property has elevators, in addition to community rooms, a fitness center, salon, and heated pool. Activities at Franciscan Vistas Ewa have been very successful, as have the shuttles to grocery stores and programs to reach out to surrounding communities, such as Catholic Charity organized events all over the island.

In order for the Mayor Wright Homes redevelopment to be successful people should not be able to tell which units are affordable and which are not. Designers should pay close attention to the transition of public to private space and be mindful of the ethnic diversity and age diversity of residents.

MAYOR WRIGHT HOMES MANAGEMENT

Cynthia Yoshida, Public Housing Supervisor at Mayor Wright Homes noted that there was at one time an organized resident association that provided some stability to the resident population. However this resident association no longer exists. Programs once included back to school dances, student tutoring, organized sports, food bank and others. Given limited staff and resources,

the resident association served a critical role in being a conduit for resident needs, activities and volunteers to assist with community events. Cynthia feels that a revitalization of a resident association should be a primary goal of a transition plan for the residents.

Additionally, Cynthia shared challenges around relocation, given the shortage of vacant units both in Mayor Wright Homes and the two other public housing communities that are under Cynthia's management. She did allow that there were some seniors that reside in two bedroom units that could be moved to one-bedroom units. Close coordination with Cynthia would be advised as her input and time for advanced planning will be critical in avoiding as much off site relocation as possible during construction.

From the perspective of some current residents, one concern in regard to the market rate units is whether or not people in those units will look down on the public housing residents? In general, it is believed that people who choose to live in a mixed income community would be accepting of the mixed-income community; that some mix of income may be within the same family; that the area will look and feel like a community; and that the transition will address the change in protocols and rules.

Some community representatives who attended the charrette said that keeping the close-knit community culture and feeling of home will be beneficial because they fear the drastic change and loss of community. For example, it will be important to establish a symbiotic relationship between residents and retail/training, and other programs that will be needed to support the overall development.

Resident education will need to drive the development of the lease transitions; for example, financial literacy education will help tenants understand how these units are different than the previous units. Overall a lot of effort will need to go into this transition program to support the new life style.

LEGISLATORS

Senator Susie Chun-Oakland also has a comprehensive database of social service providers and can be a great resource to partners working on the transition support.

It was suggested that there be at least two large scale community events that also include the surrounding neighbors. One would be to share conceptual plan ideas and a final meeting to present the final Master Plan.

It was noted that HHFDC monitors these types of projects, so a goal should be to keep it affordable all the way through to the completion of the deal.

The mixed-income components should occur in discrete phases to enhance the economic mix. This will help it be a sustainable project with a healthy variety of housing alternatives since this year alone the state is 50,000 units short at all income levels. In order to support this, the market analysis (vacancy rate) should be considered based on local residents rather than vacation home investors.

The project will have to include a comprehensive education at all levels to address quality of life and household management.

Other suggestions from the legislators include robust preparation for everyone in the community for the transition with an emphasis on preserving residential character of the area. Opportunities to age in place and increase the walkability should be pursued.

HONOLULU FIRE DEPARTMENT

A majority of the incidents the Hawaii Fire Department (HFD) helps with are medical rather than fire-related, so having more residents at the Mayor Wright Homes redevelopment means that the fire department will be there more often. It will be important that elevators be designed to accommodate a gurney laying down flat to improve response.

With regards to street calming measures, HFD noted this will slow down their response time and that there are design requirements and turning radius requirements they can provide, and that they should try to not make the streets any wider than necessary.

Related concerns are the challenges with addressing the requirements for regular access. The existing security gates are currently too narrow for their equipment and they need to stage trucks outside since not all of them will fit through the gates, so they have to deal with this concern on all emergencies.

They expressed some concern about ladders interacting with power lines on Liliha Street, and would like to have no power lines between where fire trucks need to access the site and facilities. In particular the Liliha Street frontage is a major concern due to traffic and access. They are glad that the entrance from Liliha Street has recently been opened back up.

If the new facilities are high rises, the fire department will need space in front of the building for their ladder trucks.

Because of multiple languages, HFD wants to work with everyone on site so they can introduce them to the principles of working with HFD and teach everyone, including managers, how to take care of themselves (community based).

One of their major concerns is not the separation of occupancies but the availability of combustibles because, in their experience, people light things on fire.

The availability of combustibles must be controlled because, based on their experience, people light things on fire.

Even with a redundant wet system across all floors, they would like to have aerial ladder access up to a certain floor level. Additionally, each floor level should have smoke towers, and there should be a command center on a lower floor with an exit to the outside.

The project needs to ensure that it complies with all code requirements and that the radio strength is adequate. More recently they have been encouraging bi-directional amplifiers so the buildings don't need telephone jacks – which can save costs on the jack system.

KALIHI PALAMA HEALTH CENTER

Kalihi Palama Health Center (KPHC) helps a wide range of patients from the community. Overall their main focus is on healthcare–WIC, dental, optical, behavioral health, diabetes clinics, and healthcare for homeless programs. They help not just with medical services but also with interpretation, homeless or low-income requirement assessment, med quest, food stamps, social services, WIC program, ESL, SNAP, welfare, and paying personal bills.

A major concern they have is where people will go during the interim phases of the project, especially considering literacy and language are huge barriers to the immigrant communities. They receive State and Federal funding and have partnered with HTAP, Helping Hands, and S.A. Kukui Garden. They also provide clothing vouchers to Salvation Army. Some specific outreach (which must be in person) are educational partners that help with checks, bills, etc.; and UH students that work with cultural groups to serve patients from different backgrounds. People come from all over the island but most people find out about the programs through word of mouth. Lastly, KPHC has to be proactive in following up with patients since they won't always hear back from them.

THE SALVATION ARMY

The Salvation Army at Aala St. and Vineyard Blvd. provides rehab for men; family services such as utility assistance and emergency food supplies; budget classes; rental assistance; adult daycare; housing casework for individuals and families; and homeless prevention.

Most recently, the Salvation Army has graduated 15 individuals from their Pathway of Hope project; and while the goal is a 6 month stay, participants are allowed to stay longer if needed. Particular programs that have major outreach at Mayor Wright Homes are the summer camp programs (Wailua) for 7-17 year olds and troops character building program (roughly 30 students/week). While these programs do not garner very much family involvement, many children participate.

HAWAII LITERACY

Hawaii Literacy provides homework help, volunteer tutoring, a big Saturday story hour, the Hawaii Federal Credit Union Children savings bank program. Residents would like to see a head start/ early child care facility on site.

Overall the paperwork barrier for local residents is huge. There are problems with language access and trouble getting information. Residents often say they "don't know what paperwork says," "don't have guardianship papers for children," and "why aren't families doing this/that..?" Residents find many of the organizations they use through word of mouth.

(Note: See Addendum One: Hawaii Literacy "wish list" for a future Family Literacy Library/ Community Learning Center at Mayor Wright Homes)

HAWAII DEPARTMENT OF EDUCATION

Local schools currently cannot serve additional students as they are at capacity. Particularly from Middle Street to Ala Moana there will be a squeeze on educational facilities. Since these areas are an urban model, there is no easy way to get more land through the redevelopment. The Hawaii Department of Education (HIDOE) will need to reconsider school Facilities Assessment and Development Schedules (FADS) because new schools will need to be built more densely as part of an urban model.

Currently, the capital budget is based on number of students. The number of staff the school can hire depends on the student count so HIDOE would like to see the redevelopment keep the numbers per school as stable as possible. The deadline dates for funding allocation based on student population are the 3rd Friday of August, the last Friday of September, and mid-January.

A challenge for this area is that the Mayor Wright Homes TMK is split between 3 elementary schools (K-5) that are each very full so balancing the shift in students will be very important.

(Kaiulani has the largest percent of Mayor Wright Homes students; and roughly 75% of Likelike's students live in Mayor Wright Homes).

Because the student population is split between 3 schools it may be more able to absorb students in each area, although this will need to be coordinated with the Complex Area Supervisor (CAS) Ruth Silverstein. With nearby boundaries, small informal boundary changes will need to be coordinated when looking at phasing components – and based on what is happening in surrounding areas (for example Lanakila HPHA units may be developed to 8 story buildings). But the lines will not change until redevelopment starts happening (and will keep happening until completion). Further, principals can work with surrounding principals on GE's through internal coordination to accommodate some residents/transition.

It appears that middle schools have more space due to the design requirements in place at the time of their design. In general, the middle and high school facilities are not as critical. The DOE was hopeful the project would consider providing space for pre-K, kindergarten, and 1st grades.

HIDOE assumes that if all 1900 units are public housing there will be more students per unit to accommodate. Therefore, the breakdown of unit types will be very important for determining how many students need to be accounted for the development. It is important to note that all of the units consist of a mixed income population as opposed to all being public housing units.

HIDOE has opportunities for finance mechanisms in this area but not land due to limitations of availability, but they like the idea of renovating this area because they hope it will fit more with what the community would like to see. New legislation allows DOE to use land fees for buildings and additions rather than just new school development. While impact fees are not currently law, it may be coming up in the next couple years so the development team should be aware of this potential obligation.

Heidi Meeker, a Land Use Planner for HIDOE, alerted the team to work closely with HIDOE to project in advance the status of student population increases. There will be impact fees due to HIDOE as a result of the project.

Kelly Bart, Principal of Likelike Elementary School, has staff that lives in MWH as well as a number of students. In the past few years they have revamped their parent outreach and now have an average of 30-40 parents that regularly attend school meetings. This is a significant number and a primary resource for organizing around a social transition plan. Kelly suggested that someone attend the Literacy Night held on September 16 as a recruiting and organizing opportunity. There are also new opportunities for involvement in STEM and Science night, and more students for after-school programs in education and enrichment.

Kelly asks parents to come for "coffee hours" where he tries to get translators (Vietnamese, Chinese, Marshallese & Chuukese).

During his time as principal, he has also redone the vision and mission of the school, which has created a more open and inviting approach, resulting in a change in attitude for the better. And while he's always had good participation compared to other schools, they have increased parent participation.

The other two elementary school principals, middle school and two high schools, may also be an organizing source and important partners in the redevelopment.

PALAMA SETTLEMENT

Earl Fusato, Director of the Palama Settlement, responded to an idea that came up in the conversations about the development of a new "Community Services Shuttle Bus" to improve access for all residents to the available services that currently exist the neighborhood. Palama Settlement already has two eight-passenger vans that were recently donated and they sit idle in the parking lot for most of the day. With diligence, these and similar assets could be coordinated for maximum utility.

MAYOR WRIGHT HOMES RESIDENTS

Below are only a few examples of many possible resident led enterprises that could be developed using already existing physical resources, and perhaps some modest financial support from local Non-Government Organizations (NGO) and philanthropic organizations. Or if none of these ideas turn out to be feasible, there might be others that can be identified through some creative one on one interchanges with local residents, with support from local resource providers.

Two residents we spoke with are currently unemployed. However, they said they would be excited to take on work related to their mutual passion for childcare and early childhood development. A niece of one of these residents, who is currently a part time employee in a local bakery, was forthright in adding that her ideal job and personal passion could be met by caring for disabled children.

Another conversation took place with a longstanding, 40-year Mayor Wright Homes resident who has a passion for flowers. She does flower arranging occasionally during holidays at a local department store, where she earns a meager income. In a place where land could be immediately made available for cultivation, we can only wonder whether, with some help, this passionate local resident might be trained to operate a small flower shop and produce an income that is at least equal to, and perhaps even more than her current occasional flower arranging work.

Some people suggested that the site could also serve as a community services hub. This concept could eventually grow into a physical "one stop" hub for on-site community services in the final plan.

Could there be an opportunity to develop a new and, based on our charrette experience, needed community resource related to early childcare development, while at the same time providing meaningful employment for current Mayor Wright Homes residents?

Once initiated, these kinds of programs are free to grow and expand during the ongoing design, construction and post occupancy phases of the project's development. For example, construction job training implemented in the concept or design phase could result in construction jobs in the construction phase. The same could be true for programs in community support services.

Can any or all of these ideas actually make it to the finish line? Through a carefully orchestrated process, with procedures that foster these kinds of initiatives and supporting programs over time, with tangible benefits for the current and future residents of the MWH community, and measurable outcomes for funders, these and many other things might be possible.

ADDITIONAL OBSERVATIONS

Having been on site of the Mayor Wright Homes for a week during the charrette, the team had numerous informal conversations with residents. Follow through with these recommendations can go a long way towards building trust and supporting residents through a successful transition. The following notes captured these important observations.

1. Residents are very picky about losing their homes because it's the only thing they've ever "owned", "what happens to me…?"

2. What will be done for the properties outside the site, because "it's always been slums." This project can become the catalyst for creating new demand for goods and services supported by 1900 units that can't be supported by 364 units.

3. How to represent all nationalities that live there? Be sure to "practice what you preach". How can we use the project to generate and manifest hope, establish trust, and ultimately to fulfill and sustain this trust?

4. Make the project relevant to those that live here. Understand the context in which the project is operating. Make sure that connections are established with residents, and deliver real estate that has adequate utilities, is relevant to the people who will live there, and enhances human capital and economic development.

5. Get to know residents as a whole (treat them all the same).

6. Establish a "Liaison" through which residents can submit questions –create an active "feedback loop", make residents understand they're a part of the project and its future. Listen and respond to what they have to say. Try doing some Potluck meals. Establish some street cred with cross-cultural communities

7. Help residents find jobs where they can demonstrate responsibilities to their community. This will do more to build pride than anything else you can give them. The Choice Neighborhoods program has an Apprenticeship Programs Initiative. It may be a Section 3 requirement.

8. Look to the construction industries as revenue sources. Work with the nearby trade unions.

9. Provide flexible spaces where residents can professionalize their businesses (business incubator). Work with residents to identify organizations and programs that would be good to have on site.

10. Provide day care or parent relief watching (Palama settlement – HS, pre, K, and 1) and an Early Learning Center

11. Get rid of the current stigma of the Mayor Wright Homes. It needs to be viewed as more safe than it is now.

12. Make it more comfortable to walk in the neighborhood. Business owners are looking forward to the project because of the current stigma of the area. Many businesses aren't currently open at night because people don't walk around at night. Palama market is packed into the night now (outside neighborhood, but with no Kalihi people).

13. Design spaces that are flexible enough to transform to multiple uses

14. Education is going to be key for the whole community, not just people on site. The redevelopment should accommodate families and minimize disruptions by minimizing removal and rebuilding. It should get ahead in unit count to reduce displacement with 2nd phase.

15. Nearby property owners don't want their property taxes to go up.

ADDITIONAL OUTSIDE RESEARCH

To illustrate the value of researching and applying lessons learned from other mixed income housing case studies, we have gathered some general information on the Harbor Point development in Boston, MA, which has 1,283 units with modest commercial space on the ground floor. Interestingly, the affordable housing residents are much more stable in staying in the development while market renters see a close to 100% turnover every year.

Harbor Point has a Tenant-at-Risk Committee composed of resident leaders. This committee meets with subsidized households to ensure that the resident is fully aware of the possibility of eviction. In this particular development, evictions in this population are very low. In 1995, approximately 50 households were evicted – most of them market rate renters. The community of former public housing residents and other subsidized renters continue to have a commitment to the project as a place to live and to neighbor. They have much more in common with one another – including children – than they do with the market-rate renters.

This illustrates the importance of supporting a reorganization of a resident's council and community association. As described earlier by the current Mayor Wright Homes property director, their resident organization used to be strong. This group was the communications conduit between management and residents. They developed and implemented a variety of programs and events. The master planning and design phase of this project provides time to organize residents to prepare for relocation and rejuvenation of a similar, but more robust and sustainable neighborhood association.

PRIORITIZED NEXT STEPS

Hunt to create Relocation Plan
- Determine requirements from HPHA
- Identify off site properties for relocation
- Create resident survey

Conduct resident survey
- Establish core team of resident leaders to assist with survey
- Create schedule/timeline for survey
- Analyze and document survey results

Revive Resident Neighborhood Association
- Utilize resident survey as opportunity to invite residents to re-establish association
- Work with core resident leaders to create agenda for a meeting
- Assist residents in the best way possible with goal of a strong association prior to moving into new homes

Strengthen Social Safety Net
- Convene service providers regularly, who have attended meetings
- Address plans for off site and on site services before and after development is completed
- Explore collaborative opportunities for providers to support resident transition into new development

Hunt to create Relocation Plan
- Determine requirements from HPHA
- Identify off site properties for relocation
- Create resident survey

Conduct resident survey
- Establish core team of resident leaders to assist with survey
- Create schedule/timeline for survey
- Analyze and document survey results

Revive Resident Neighborhood Association
- Utilize resident survey as opportunity to invite residents to re-establish association
- Work with core resident leaders to create agenda for a meeting
- Assist residents in the best way possible with goal of a strong association prior to moving into new homes

Strengthen Social Safety Net
- Convene service providers regularly, who have attended meetings
- Address plans for off site and on site services before and after development is completed
- Explore collaborative opportunities for providers to support resident transition into new development

HUMAN CAPITAL MASTER PLANNING RECOMMENDATIONS

The Mayor Wright Homes redevelopment is currently in the Concept Design Phase. One outcome of this phase will be a Physical Master Plan. Concurrent with the development of this physical plan, there should also be a "Human Capital Master Plan" (HCMP) to address the human component of the work.

Upon review of attendees to earlier resident, stakeholder, and CAC meetings in May, and stakeholder meetings during the charrette, the organizations listed in the attached list (See Addendum 2: Human Capital Planning Partners), along with others, should be convened in various ways to participate with Hunt and its consultants in creating the plan that will assist residents with a successful transition to the new Mayor Wright Homes development.

PADDLING TOGETHER

The design of an effective Human Capital Master Plan will require short and long term funding and implementation strategies so that the costs associated with the human capital development effort can be spread across a full range of community development stakeholders. Following is a possible list of players and roles:

• HUNT DEVELOPMENT: MAYOR WRIGHT HUMAN CAPITAL PLAN (HCMP)
At this point there does not appear to be a clear plan for the robust delivery of community support services in tandem with the residents of Mayor Wright Homes. Hunt should consider providing funding and critical leadership for developing this plan, in collaboration with all community support organizations.

• PHILANTHROPY: FUNDING TO NGO ORGANIZATIONS.
Private philanthropy should be invited to participate as co-designers of the HCMP, with the understanding that they will also designate certain financial resources to support the delivery of both existing and new programs and services included in the plan.

• NON GOVERNMENT ORGANIZATIONS: PROGRAMS AND SERVICES
Non-Governmental Organizations (NGOs) should be invited to engage as co-designers of the HCMP, with the understanding that they will also assume responsibility for grant writing, managing and implementing the programs and services outlined in the plan.

• GOVERNMENT: FUNDING AND DELIVERY OF PROGRAMS AND SERVICES
Certain governmental entities should be invited to engage as co-designers of the HCMP, with the understanding that they will assume responsibility for funding, and in some cases implementing certain programs and services outlined in the plan.

• SOCIAL CAPITAL MARKETS: FUNDING FOR PHYSICAL INFRASTRUCTURE
Social Capital Market (SoCap) investors should be invited to engage as co-designers of the HCMP, with the understanding that they will assume responsibility for certain components of the physical infrastructure required to implement the programs and services outlined in the plan.

• RESIDENT PARTICIPATION: RESIDENT "IN KIND" PARTICIPATION
Mayor Wright Homes residents should be invited to engage as co-designers of the HCMP, with the understanding that they will assume responsibility for participating in the implementation of most of the programs and services outlined in the plan.

CONCLUSION

The proposed Mayor Wright Homes Human Capital Master Plan, will be most effectively implemented and funded through a co-design process involving a full spectrum of community support organizations. The goal of the plan will be the creation of an effective, and economical mix of community service programs and services that support the physical, cultural, social, educational, organizational and economic well being of the Mayor Wright Homes community.

This framework for a Human Capital Master Plan for the Mayor Wright Homes was developed for Hunt Development Hawaii by Concordia: Community Centered Planning and Design (Steven Bingler, Bobbie Hill) as part of a team effort with PBR HAWAII and Associates, Inc. (Grant Murakami, Kimi Yuen, Nathalie Razo, Ramsay Taum); Design Partners Inc. (Mike Muromoto, Lena Tamasiro); and Torti Gallas Partners (Neil Payton, Michael Leitner).

Mayor Wright Homes Family Literacy Library

"WISH LIST" for future Family Literacy Library/ Community Learning Center at Mayor Wright Homes

Highest priority

- Dedicated and lockable Center (not shared community space)
- Floor plan with 1 larger space for group activities (30-40 kids) and several smaller spaces for homework, computers, adult use, classes or quiet reading
- Entire library on one floor, with design to allow for adult, keiki and toddler sections
- Section for 6-8 computers
- Section for small office or 2 staff desks- can be in main area
- A/C and ventilation
- Bathroom
- Furnished kitchen (sink and refrigerator needed) with counter space and cabinets
- Numerous power outlets
- WiFi or access to service

Great to have

- Large Built-in bookshelves
- Locked Storage for supplies
- Enough wall space for large whiteboard/smartboard
- Rubbish container nearby
- Counter space near entrance for sign-in/book checkout/advertising purposes
- Shaded outdoor area for activities, reading and community events

Notes from adult residents collected by Hawaii Literacy

August 7, 2016

Community services they or their families need are:

1) Child care: both Head or Early Start, Tutu and Me program for grandparents and toddlers
2) School age after-school activities: homework, school help, sports and cultural (HL has 1st two onsite)
3) ELL classes and GED classes (Hawaii Literacy has ELL on site)
4) Education and job training classes and programs
5) Elder care or elder support
6) Food distribution (on site now)
7) Summer meals (Hawaii Literacy ran this in 2016 because of need)
8) Health services, including WIC and substance abuse (KPHC has both)
9) Usable indoor and outdoor community spaces and someone to help coordinate and plan
10) A strong tenant's association that includes everyone and listens to even the poor residents
11) Services in close walking distance

Concerns residents shared about current MWH:

1) Poor supervision of very young children
2) Ethnic divisions (blaming Micronesians for all issues)
3) Parking problems
4) Need to care or shelter family members even if they are not on lease
5) Eviction policies should get rid of serious problems but not add up to evict good people on small issues.
6) Do not want high rises (do not want to be like KPT)
7) Want better security—want everyone to know each other and help each other
8) Do not want to live behind fences—more like "real" neighborhood
9) Want parks and more trees (shade)
10) Afraid they will be pushed out (especially elderly on fixed income)

Concerns about Redevelopment:

1) Not enough information about what will happen
2) Want to know dates and where they will go?
3) Feel the decisions are already made (they will not have a voice)

Honolulu, Hawaii 96819

Dear Mr. Mendes:

Subject: Your Letter Dated October 18, 2016 Regarding Availability of Water for 2500-Unit Mayor Wright Homes Redevelopment - Tax Map Key: 1-7-029: 003

Thank you for your letter regarding the proposed 2500 unit residential and commercial Mayor Wright Homes redevelopment.

The existing water system is adequate to accommodate the proposed residential and commercial redevelopment. However, please be advised that this information is based upon current data, and therefore, the Board of Water Supply reserves the right to change any position or information stated herein up until the final approval of the building permit application. The final decision on the availability of water will be confirmed when the building permit application is submitted for approval.

Water conservation measures are recommended for all proposed projects. These measures include utilization of nonpotable water for irrigation, using rain catchment, drought tolerant plants, xeriscape landscaping, efficient irrigation systems, such as a drip system and moisture sensors, and the use of Water Sense labeled ultra-low flow water fixtures and toilets.

When water is made available, the applicant will be required to pay our Water System Facilities Charges for resource development, transmission and daily storage.

The on-site fire protection requirements should be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department.

If you have any questions, please contact Robert Chun, Project Review Branch of our Water Resources Division at 748-5443.

Very truly yours,

ERNEST Y. W. LAU, P.E.

Dear Mr. Lau:

Request for Water Availability
Due Diligence Study for Redevelopment of Mayor Wright Homes
Tax Map Key: (1) 1-7-029: 003

On behalf of our client and the land owner, State of Hawaii, we request a determination of water availability for the subject project for due diligence purposes.

The redevelopment project includes demolition of the existing multi-family units, and construction of new multi-family units and commercial/retail areas. An existing location plan and unit count summary are attached for your reference.

Thank you in advance for your assistance. Please contact me at 748-7479 or by email, kevinm@rmtowill.com if you have any questions or need additional information.

Very truly yours,

Kevin Mendes, P.E.
Project Manager

I. Project Description

A. Overview

The proposed Mayor Wright Homes Redevelopment project is a public housing project that will redevelop the existing 364 housing units into approximately 2,500 units on 14.8 acres of land. In addition to the 2,500 residential units, 80,000 square feet of retail and commercial area and parking spaces will also be incorporated into the redevelopment plan. The project is being developed by Hunt Companies for the State of Hawaii, Hawaii Public Housing Authority.

B. Location

The project site is located in Honolulu, Island of Oahu, Hawaii, Tax Map Key (TMK) 1-7-029:003. The project is bounded by North Vineyard Boulevard, Liliha Street, N. King Street and Pua Lane. See Figure 1 for Location Map.

C. Study Purpose and Scope

This report will present and summarize the infrastructure requirements for the project. The report will include information on existing and proposed conditions, identify potential impacts and mitigation measures to accommodate the proposed development.

II. Existing Site Conditions

A. General

Mayor Wright Homes is currently comprised of 35 two and three-story barracks style buildings arranged in a grid pattern. The 35 buildings total up to 364 residential units.

B. Topography

The topography in this region is flat to moderately sloped in a north to south direction. The approximate ground elevations range from ~9 ft. to ~27 ft. above mean sea level based on a topographic map prepared by Hawaii Engineering Group, dated August 26, 2016. See Figure 3 for Existing Topography Map.

C. Geology and Soils

Based on the *U.S. Soil Conservation Service Soil Survey (1972)*, the majority of existing soils within the project site are classified as Ewa Silty Clay Loam (EmA). Ewa Silty Clay Loam has slopes that range from 0%-2%. This type of soil generally has a surface layer, about 29-inches thick, of silty clay loam. The lower 29-39 inches consist of bedrock. Runoff is very slow, and erosion hazard is no more than slight.

The eastern corner of the site is classified as Kaena Clay (KaB). Slopes range from 2%-6%, with a surface layer, about 10-inches thick, of clay. The lower 10 to 54 inches consists of stony clay. Runoff is slow, and erosion hazard is slight.

See Figure 5 for Soils Map.

D. Climate

The project site is located in metro Honolulu, and receives a moderate amount of rainfall each year with an average annual rainfall of approximately 29 inches. The wettest month is December, with an average monthly total of approximately 4.2 inches. The driest month is August, with an average total of 1.1 inches. The average annual air temperature is approximately 78 degrees F.

E. Land Use

The zoning designation of project site is A-2 (Apartment, Medium Density).

F. Flood Hazard Determination

Based on the Federal Emergency Management Agency, Flood Insurance Rate Map (FIRM), Panel 354 of 395 dated January 19, 2011, the project site is located in the Zone X, areas determined to be outside of the 0.2% annual chance floodplain. See Figure 4 for FIRM Map.

III. Site and Roadways

A. Existing Conditions

Existing roadways along the boundary of the project include N. Vineyard Boulevard (State) to the north, N. King St. (City) to the south, Pua Lane (City) to the west, and Liliha Street (State) to the east. Existing open spaces on site include courtyards and parking lots. N. Kukui Street (Private) connects to Pua Lane and Liliha Street and is the main vehicular access to the site. Several lanes within the site provide access to existing buildings and terminate as dead ends.

N. Vineyard Blvd. is a six-lane, divided urban arterial highway. It serves as a significant local thoroughfare, as well as a freeway bypass to carry some overflow traffic from the H-1 freeway.

N. King Street is a four lane, undivided urban arterial highway with separate turn and auxiliary lanes. It is an important street for accessing downtown Honolulu, and holds historical value as what was once the main connector from the harbor to Honolulu. Presently, few remaining retail shops and deteriorating buildings give N. King Street an ancient character.

Pua Lane is a two lane, undivided local street. It serves as a connecter between N. Vineyard Blvd. and N. King Street, as well as providing direct access to Mayor Wright Homes. Access to additional residential and commercial areas in abutting properties are also provided by Pua Lane.

Liliha Street is a four-lane, undivided urban arterial highway. It is a heavily trafficked connection beginning at the Dillingham Blvd./N. King Street intersection, passing under the H-1 Freeway, and leading to Nuuanu. A driveway connection to N. Kukui Street off of Liliha Street provides direct access to the project site. On-street parking is located on the west side of the street.

Traffic signals are located at the N. King Street/Liliha Street, N. King Street/Pua Lane, Liliha Street/N. Vineyard Blvd., Liliha Street/N. Kukui Street, and N. Vineyard Blvd./Pua Lane intersections.

See Figure 2 for Existing Site Plan.

B. Proposed Conditions

The proposed development includes a mix of podium and tower style buildings totaling approximately 2,500 residential units. The project is estimated to be developed in five increments identified as "blocks" in this preliminary engineering report (PER). Up to 80,000 square feet of retail/commercial area is proposed for the project. Parking accommodations for the proposed development will meet City requirements for a (transit oriented development (TOD). For the purpose of this PER, approximately 3,200 stalls were estimated. A community park and community gardens will be located within the development.

Interior, private roads will facilitate multi-modal circulation through the development. New driveway connections will be provided at N. Vineyard Blvd. (1), N. King St. (1) and Pua Lane (2). The proposed development aims to connect all the blocks by utilizing pedestrian friendly streets that converge at a community park.

See Figure 6 for Proposed Site Plan.

C. Transportation Assessment

Existing Conditions:

A preliminary transportation impact analysis report for the redevelopment of the Mayor Wright Homes was prepared by Fehr & Peers. It was determined that most of the signalized intersections in the vicinity of the site are operating at close to the City and County of Honolulu's Desirable operating threshold [Level of Service (LOS) D or better]; and at two locations, undesirably at LOS E or F during peak times.

The two intersections that are currently operating poorly are Liliha St./Dillingham Blvd./N. King St. and Liliha St./N. Vineyard Blvd. These two intersections would

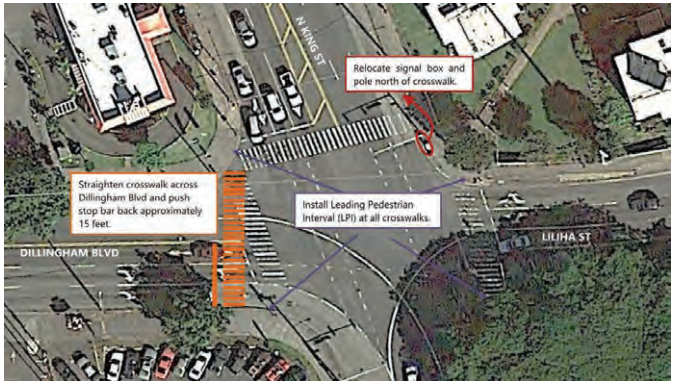
be impacted with the first phase of construction (Block B2) and several improvements would be needed to mitigate the project's impact.

Proposed Mitigations:

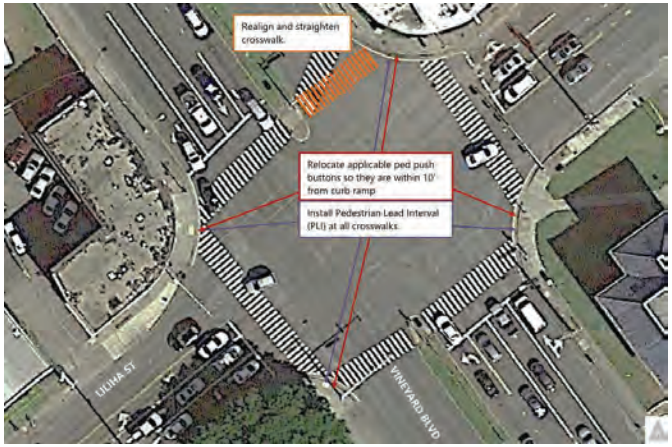
At the Liliha St./Dillingham Blvd./N. King St. intersection, there are no feasible roadway capacity enhancements that can be implemented without significant right-of-way acquisitions on other properties. The State of Hawaii Department of Transportation (HDOT) stated that in lieu of increasing vehicle capacity to mitigate the project's impact, HDOT is a proponent for implementing safety enhancements for pedestrians and bicycles at the intersection.

At the Liliha St./N. Vineyard Blvd. intersection, an additional turn lane could be achieved by narrowing the existing through lanes to 11 feet, narrowing the two left turn lanes to 10 feet, maintaining the through/right lanes at 13 feet, and taking approximately 4 feet of the existing median. The remaining median would still satisfy the Americans with Disabilities Act (ADA) guidelines of being an area of refuge with minimum width of 6 feet. Similarly to the Liliha St./Dillingham Blvd./N. King St. intersection, HDOT is supportive of pedestrian enhancements at this intersection.

Proposed pedestrian enhancements for both intersections can be seen in the figures below.



Liliha Street/Dillingham Blvd./N. King Street Intersection



Liliha Street/N. Vineyard Blvd. Intersection

IV. Grading and Drainage

A. Existing Runoff

The existing on-site runoff generally flows towards the southern corner of the site in a north to south direction and is conveyed to the City's storm drainage system through inlets, catch basins and culverts. Off-site runoff from adjacent streets are conveyed to the City's drainage system via concrete curb and gutter and catch basins and does not enter into the project site.

Onsite drainage was analyzed in three drainage areas. Drainage area 1 is delineated by the area between N. Vineyard Blvd. and N. Kukui Street and consists of a drainage area of approximately 7.2 acres. Drainage area 2 is delineated by the area between N. Kukui Street and N. King Street and has a drainage area of approximately 4.8 acres. Drainage area 3 (Phase 1 of the development) is approximately 2.8 acres. Runoff quantities were calculated for the 10-year 1-hour and a 50-year 1 hour storm events for each of the drainage areas. The results of the analysis are summarized in the table below.

EXISTING RUNOFF QUANTITIES

Storm Event	Drainage Area	Description	Q (cfs)	C	I (in./hr.)	Corr. Factor	A (ac.)
10-yr, 1-hr	1	Roofs, Pavement, Sidewalk	24.39	0.90	2.34	2.80	4.14
		Green Areas	5.98	0.30	2.34	2.80	3.04
		Subtotal	**30.4**				
	2	Roofs, Pavement, Sidewalk	14.55	0.90	2.34	2.80	2.47
		Green Areas	4.64	0.30	2.34	2.80	2.36
		Subtotal	**19.2**

B. Existing Drainage System

Runoff from the site discharges to 2 (two) separate drainage systems. The drainage system in drainage area 1 consists of inlets and catch basins and culverts ranging in size from 8-inches to 24-inches in diameter. Runoff from the drainage area discharges a 10-year peak flow 30.4 cfs to an existing 28" x 14" box culvert which crosses under Liliha Street. Runoff is conveyed around Beretania Community Park and ultimately discharges into Nuuanu Stream which is located south-east of the project site.

The drainage system in drainage area 2 consists of inlets and catch basins and culverts ranging in size from 12-inches to 24-inches in diameter and discharges a 10-yr peak flow of 32.1 cfs to an existing 24-inch culvert located in N. King Street. The City Drainage System connects to the private Castle and Cooke drainage system that includes a drainage pumping station near Best Buy, Iwilei. Runoff ultimately discharges into Kapalama Canal via a grassed open channel located west of the project site.

See Figures 7 and 8 for Existing Drainage System.

C. Proposed Runoff

The proposed project will be designed to direct storm water runoff away from the buildings and structures toward open grassed or paved areas. The project will be designed to maintain existing drainage flow patterns, to the maximum extent practicable to minimize adverse impacts to downstream improvements. Storm water runoff from the open grassed and paved areas will be captured via surface catch basins and inlets and conveyed through an underground drainage system. Storm water runoff from the project will discharge to the existing Liliha Street and N. King Street drainage systems but will be limited to pre-development runoff quantities.

Any increase in runoff generated from the proposed improvements which adversely impacts downstream improvements will be mitigated by retaining the runoff on-site in accordance with the City and County of Honolulu's *Storm Drainage Standards (2000)*. Runoff quantities for proposed conditions were calculated for the 10-year and a 50-year 1 hour storm events and compared to existing runoff quantities to determine the increase in runoff generated from the project. The results of the analysis are summarized in the tables below. Based on the results, approximately 26,235 cubic feet of runoff would need to be retained on-site for the overall development plan and approximately 7,870 cubic feet would need to be retained for phase 1.

PROPOSED RUNOFF QUANTITIES

Storm Event	Drainage Area	Description	Q (cfs)	C	I (in./hr.)	Corr. Factor	A (ac.)
10-yr, 1-hr	Phase 1	Roofs, Pavement, Sidewalk	16.85	0.90	2.34	2.80	2.86
		Green Areas	0.47	0.30	2.34	2.80	0.24
		Subtotal	**17.3**				
	Balance of overall development	Roofs, Pavement, Sidewalk	55.01	0.90	2.34	2.80	9.33
		Green Areas	4.76	0.30	2.34	2.80	2.42
		Subtotal	**59.8**				
		Total	**77.1**

		Total	**112.7**				

NET INCREASE IN RUNOFF

Storm Event	Storm Event	Exist. Q (cfs)	Prop. Q (cfs)	Net Increase (cfs)	Required Volume (cf)
10-yr, 1-hr	Phase 1	12.9	17.3	4.4	7,872
	Balance of overall development	49.6	59.8	10.2	18,364
	Total			**14.6**	**26,235**
50-yr, 1-hr	Phase 1	18.7	26.4	7.7	13,807
	Balance of overall development	71.6	86.3	14.7	26,525
	Total			**22.4**	**40,332**

D. Proposed Drainage System

The drainage system for the proposed development will consist of roof downspouts, grassed swales, concrete curb and gutter, inlets and catch basins and underground pipes to capture and convey runoff to the existing drainage systems on Liliha Street and N. King Street and to on-site retention systems.

Retention of increased runoff due to the proposed improvements will be accomplished by on-site retention basins, underground storage units or infiltration methods. Opportunities to reuse rainwater captured in catchment basins will also be explored in the detailed design phase.

V. Water Quality

The City & County of Honolulu recently adopted new guidelines related to storm water quality. The Rules Relating to Water Quality (2016) apply to all development and land disturbing activities within the City and County of Honolulu and establish minimum requirements for the selection, design, implementation and maintenance of Best Management Practices (BMPs). The new guidelines go into effect on August 16, 2017.

A. Erosion and Sediment Control

The proposed development is classified as a Category 5 project and will adhere to all requirements set forth in the applicable section for that classification. The requirements for Category 5 projects include:

- An Erosion and Sediment Control Plan (ESCP) must be prepared by an Engineer licensed in the State of Hawaii;
- An ESCP Coordinator must be designated and shall be responsible for implementing the ESCP at the project site;
- A National Pollutant Discharge Elimination System (NPDES) General/Individual Permit Authorizing Discharges of Storm Water Associated with Construction shall be obtained from the Department of Health (DOH);
- Erosion Control BMPs;
- Sediment Control BMPs;
- Good Housekeeping BMPs;
- Dewatering non-storm water
- Hydrotesting water;
- BMP inspections and form completion, pre-construction and once every seven days, conducted by the ESCP Coordinator.

B. Post Construction

The proposed development is classified as a Priority A project and will adhere to all requirements set forth in the applicable section for that classification. The requirements for Priority A projects include:

- Retain on-site as much of the Water Quality Volume (WQV) as feasible;
- Biofilter the remaining portion of the WQV that is not retained on-site as feasible;
- If infeasible to retain and/or biofilter the WQV, one of the following alternative compliance measures is required:
    - Treat and discharge any portion of the WQV that is not retained on-site or biofiltered;
    - Retain or biofilter at an off-site location the equivalent volume of the WQV that is not retained on-site or biofiltered.
- Incorporate appropriate LID Site Design Strategies to the MEP;

- Incorporate Source Control BMPs to the MEP;
- A Storm Water Quality Strategic Plan shall be submitted with or as a part of the Master Development Plan for Department review;
- A Storm Water Quality Report shall be prepared by a Certified Water Pollution Preparer (CWPPP) and must be reviewed and approved prior to issuance of permits for development.

C. Low Impact Development

An important aspect in modern day design is Low Impact Development or Low Impact Design (LID). LID is an approach sought out by planners, engineers and regulatory boards to reduce the environmental impacts from new development or redevelopment. LID aims at reducing the environmental footprint while maintaining or enhancing the owner/developer's purpose and vision of the site. On the subject of water quality, there are two types of BMPs – Source Control and Treatment Control.

Source Control is the practice of preventing storm water from contacting work areas, and preventing pollutants from contacting surfaces that come into contact with storm water. Source controls for this project may include the following:

- Landscape areas – all areas that do not consist of concrete or asphalt will consist of grass and trees.
- Automatic Irrigation Systems – landscape areas will have an automatic irrigation system
- Storm drain inlets – signs and/or stencils will be placed directly adjacent to all inlets.
- Loading Docks – loading areas will be paved with concrete and if necessary, an engineered infiltration system will be installed.
- Outdoor Trash Storage – Outdoor trash bins will be covered, on paved surfaces, and will not be located near storm drains.
- Parking Areas – pavement runoff will be directed towards vegetated/landscaped areas if possible.

Treatment Control BMPs are engineered techniques designed to remove pollutants from storm water runoff prior to discharge to the storm drain system or receiving waters. Treatment Control BMPs may include methods such as retention, biofiltration and alternative compliance BMPs.

Retention:
Where applicable, runoff from rooftops or impervious surfaces will be conveyed to rain gardens and catchment basins. The proposed open space/park and underground storage units may be used to serve as an infiltration basin for

stormwater to be stored and filtered into the soil matrix. Runoff captured in catchment basins will be filtered and reused wherever possible.

D. Treatment Control BMPs Numeric Sizing Criteria

Treatment Control BMPs are sized for either volume, flow, or demand, depending on the BMP. Preliminary calculations were performed to determine water quality volume and flow quantities. The results of the analysis are summarized in the table below.

WATER QUALITY VOLUME SUMMARY

Drainage Area	Required V (cf)	P	% Impervious	C	A (ac.)
Phase 1	**14,847**	1.50	92%	0.88	3.10
Balance of overall development	**48,918**	1.50	79%	0.76	11.75

WATER QUALITY FLOW SUMMARY

Drainage Area	Description	Required Q (cfs)	Factor	C	I (in./hr.)	A (ac.)
Phase 1	Roofs, Pavement, Sidewalk	1.37	1.50	0.80	0.40	2.86
	Green Areas	0.01	1.50	0.10	0.40	0.24
Balance of overall development	Roofs, Pavement, Sidewalk	4.48	1.50	0.80	0.40	9.33
	Green Areas	0.15	1.50	0.10	0.40	2.42
	Total	**4.6**				

VI. Water System

A. Existing Conditions

The potable and fire protection water service is provided by the City and County of Honolulu, Board of Water Supply's Metro 180 system which provides service from Pearl City to East Honolulu. A maximum water pressure (static) of 67 psi is anticipated at the site. The Honolulu Board of Water Supply (BWS) no longer does flow tests on the existing City system, but the available residual peak flow pressure at the site can be determined by their computer model. The private system can be flow tested to verify the results of the model.

Existing water systems adjacent to the project site include 24-inch and 42-inch transmission mains on N. King Street, N. Vineyard Blvd., and Pua Lane. 12-inch mains are located in Liliha Street and N. Kukui Street. Existing fire hydrants are

located around the perimeter of the project boundary and along N. Kukui Street, within the project site.

See Figure 12 for Existing Water System.

B. Criteria and Methodology

A potable water system will be designed in accordance with the Board of Water Supply (BWS) *Water System Standards (2002)*. The design criteria for domestic water consumption are summarized in the table below.

DIVISION 100 - PLANNING

Table 100-18 - DOMESTIC CONSUMPTION GUIDELINES

AVERAGE DAILY DEMAND*

ZONING DESIGNATION	HAWAII	KAUAI	MAUI	OAHU
RESIDENTIAL:				
Single Family or Duplex	400 gals/unit	500 gals/unit	600 gals/unit or 3000 gals/acre	500 gals/unit or 2500 gals/acre
Multi-Family Low Rise	400 gals/unit	350 gals/unit	560 gals/unit or 5000 gals/acre	400 gals/unit or 4000 gals/acre
Multi-Family High Rise	400 gals/unit	350 gals/unit	560 gals/unit	300 gals/unit
COMMERCIAL:				
Commercial Only	3000 gals/acre	3000 gals/acre	6000 gals/acre	3000 gals/acre
Commercial/Industrial Mix	--	5000 gals/acre	140 gals/1000 sq. ft.	100 gals/1000 sq. ft.
Commercial/Residential Mix	--	3000 gals/acre	140 gals/1000 sq. ft.	120 gals/1000 sq. ft.
RESORT (To include hotel for Maui only)	400 gals/unit (1)	350 gals/unit	350 gals/unit or 17000 gals/acre	350 gals/unit or 4000 gals/acre
LIGHT INDUSTRY:	4000 gals/acre	4000 gals/acre	6000 gals/acre	4000 gals/acre
SCHOOLS, PARKS:	4000 gals/acre or 60 gals/student	4000 gals/acre or 60 gals/student	1700 gals/acre or 60 gals/student	4000 gals/acre or 60 gals/student
AGRICULTURE:		2,500 gals/acre	5000 gals/acre	4000 gals/acre

* - Where two or more figures are listed for the same zoning, the daily demand resulting in higher consumption use shall govern the design unless specified otherwise.
(1) - Subject to special review and control by the Manager.

The BWS has been discussing with the Department of Planning and Permitting (DPP) a modified design criteria for Transit Oriented Development (TOD). Water demands will be adjusted for the modified design criteria once the criteria is finalized.

C. Projected Water Demands

Phase 1 of the Mayor Wright Homes Redevelopment project includes 650 residential units and up to 80,000 square feet of retail and commercial space to be conservative. The first phase is estimated to generate a net increase in total average daily potable water demand of approximately 0.23 million gallons per day (mgd), a maximum daily demand of 0.34 mgd, and a peak hour demand of 0.69 mgd. The projected potable water demands from the Phase 1 development are listed in the table below.

The overall development plan includes up to 2,500 residential units and up to 80,000 square feet of retail and commercial space. The project is estimated to generate a net increase in total average daily potable water demand of approximately 0.87 million gallons per day (mgd), a maximum daily demand of 1.31 mgd, and a peak hour demand of 2.62 mgd. The projected potable water demands from the development are listed in the tables below.

PHASE 1 WATER DEMAND SUMMARY

	Desc.	Area (SF)	Units	Usage (gal. per unit)	Unit Average Daily Demand (gpd/1000 sf)	Unit Average Daily Demand (gpd/1 ac)	Avg. Daily Demand (gpd)	Max. Daily Demand (gpd)	Peak Hour (gpd)	Fire Flow (gpm)
Existing	Demolish exist. buildings		(102)	400			(40,800)	(61,200)	(122,400)	
Proposed	Retail/Community Space	80,000			120		9,600	14,400	28,800	2,000
	Residential		650	400			260,000	390,000	780,000	2,000
	Park	10,400				4,000	954	1,431	2,861	1,000
		Net Increase	**548**				**229,754**	**344,631**	**689,261**	

OVERALL DEVELOPMENT WATER DEMAND SUMMARY

	Desc.	Area (SF)	Units	Usage (gal. per unit)	Unit Average Daily Demand (gpd/1000 sf)	Unit Average Daily Demand (gpd/1 ac)	Avg. Daily Demand (gpd)	Max. Daily Demand (gpd)	Peak Hour (gpd)	Fire Flow (gpm)
Existing	Demolish exist. buildings		(364)	400			(145,600)	(218,400)	(436,800)	
Proposed	Retail/Community Space	80,000			120		9,600	14,400	28,800	2,000
	Residential		2,500	400			1,000,000	1,500,000	3,000,000	2,000
	Park	115,800				4,000	10,632	15,948	31,895	1,000
		Net Increase	**2,136**				**874,632**	**1,311,948**	**2,623,895**	

D. Proposed Water System

The necessary water system facilities will be installed to serve the development and are anticipated to include water mains, laterals and fire hydrants for domestic and fire protection services. In addition, booster pumps will be required to provide fire protection to the proposed building structures.

New 12-inch and 8-inch waterlines are proposed within the site and and will connect to the existing 12-inch main in Liliha Street.

See Figure 13 for Proposed Water System Plan.

E. Impacts and Mitigation

Based on a water availability request for 2,500 residential units and 75,000 sf of retail and commercial development, BWS responded with a letter dated November 9, 2016 confirming that the existing water systems are adequate to accommodate the proposed demand. Additional coordination with BWS is required to confirm water availability for the increase in retail and commercial development from 75,000 sf to 80,000 sf. The final decision on the availability of water will be confirmed when the building permit application permit is submitted for approval and Water System Facilities Charges are paid for by the applicant.

VII. Sewer System

A. Existing Conditions

Existing sewer mains, varying in size from 8-inch to 16-inches in diameter, are located in Pua Lane, Liliha Street, and N. King Street. Existing 6-inch and 8-inch diameter sewer mains are located within the project site and connect to an 8-inch sewer line in N. King Street (via Desha Lane) and to an 8-inch sewer line in Liliha Street.

An existing 10-inch sewer main along Pua Lane connects to a 16-inch main in N. King Street. An 8-inch sewer main in Liliha Street splits into 8-inch and 12-inch mains and connects to a 12-inch sewer main in N. King Street. Sewer flows from the project site are conveyed to the Awa Street pump station from sewer lines in Dillingham Blvd. and N. King Street. The Awa Street pump station lifts sewer flow to the 54-inch sewer main located in Nimitz Hwy. which conveys sewer to the existing Hart pump station, to be pumped to the Sand Island Wastewater Treatment Plant.

See Figure 10 for Existing Sewer System.

B. Criteria and Methodology

The sewer system will be designed in accordance with the City and County of Honolulu's *Design Standards of the Department of Wastewater Management (1993)*, and is proposed to be dedicated to the City.

C. Projected Wastewater Contributions

The Phase 1 design is estimated to include 650 residential units and 80,000 square feet of retail and commercial space. The project will have an estimated net increase in average daily wastewater contribution of approximately 0.14 million gallons per day (mgd), a max design contribution of 0.56 mgd and a peak design contribution of 0.56 mgd over existing flows. The projected contributions from the Phase 1 development are listed in the table below.

The ultimate design includes up to 2,500 residential units and up to 80,000 square feet of retail and commercial space. The project will have an estimated net increase in average daily wastewater contribution of approximately 0.52 million gallons per day (mgd), a max design contribution of 1.54 mgd and a peak design contribution of 1.54 mgd. The projected contributions from the development are listed in the tables below.

PHASE 1 SEWER DEMAND SUMMARY

	Desc.	Units	Acres	Capita	Gal/Capita/Day	Design Avg. Flow (mgd)	Design Max Flow (mgd)	Design Peak Flow (mgd)
Existing	Demolish exist. buildings	(102)	2.99	286	80	(0.024)	(0.116)	(0.120)
Proposed	Retail/Community Space	-	1.84	74	80	0.161	0.676	0.680
	Residential	650	1.16	1820	80			
	Net Increase	**548**				**0.137**	**0.560**	**0.560**

OVERALL DEVELOPMENT SEWER DEMAND SUMMARY

	Desc.	Units	Acres	Capita	Gal/Capita/Day	Design Avg. Flow (mgd)	Design Max Flow (mgd)	Design Peak Flow (mgd)
Existing	Demolish exist. buildings	(364)	14.86	1020	80	(0.087)	(0.411)	(0.430)
Proposed	Retail/Community Space	-	1.84	74	80	0.601	1.949	1.967
	Residential	2500	13.03	7000	80			
	Net Increase	**2,136**				**0.515**	**1.537**	**1.537**

D. Proposed Wastewater System

The necessary sewer system facilities will be installed to serve the development and are anticipated to include gravity sewers and related appurtenances. Facilities will be designed to meet the standards of the City and County of Honolulu. All sewer facilities within public roads will be dedicated to the City.

New sewer connections to existing manholes will be provided along Pua Lane and connections to an existing 8-inch stubout and manhole will be provided along Liliha Street. A sewer connection to an existing 8-inch stubout will be provided at the Makai boundary of the project at Desha Lane.

See Figure 11 for Proposed Sewer System.

E. Impacts and Mitigation

A sewer connection application was approved by the City on 12/18/17 for 650 residential units and 80,000 square feet of commercial space.

A Global Consent Decree (GCD), entered between the City and County of Honolulu, Department of Environmental Services (ENV), U.S. Environmental Protection agency and the State of Hawaii Department of Health outlined improvements to be implemented to the CCH waste water collection and treatment systems. The CCH has identified deficiencies at the Awa Street waste water pump station (WWPS) and School Street, College Walk and Iwilei area sewer lines.

The Awa relief sewer project will be constructed in two separate phases: Phase 1 – Install a new gravity sewer line from School Street to Nimitz Highway along Houghtailing Street and Waiakamilo Road to relieve downstream deficiencies by diverting flow from School Street and; Phase 2 – Was to relieve the Awa Street WWPS with a new trunk sewer along Dillingham Boulevard and Alakawa Street. The City is in the process of revising Phase 2 to upgrade the Awa Street WWPS.

Phase 1 of the Awa relief sewer project will be implemented to correct some of the identified deficiencies and must be completed by June 30, 2020 in order to comply with GCD Paragraph 18.f requirements. Phase 2 upgrades to the Awa Street WWPS is not part of the consent decree requirement and has yet to be scheduled by the City

Implementation of the GCD Paragraph 18.f improvements are not currently required for full buildout of the MWH project. However, should additional projects within the Awa Street WWPS development area (including major developments such as Kapālama-Iwilei TOD improvements) occur prior to full buildout, completion of both Phase 1 and Phase 2 of the Awa Relief Sewer Project could be required to provide adequate sewer capacity for the City waste water collection system.

VIII. Electrical System

A. Existing Conditions

The sole electric utility serving the island of Oahu is Hawaiian Electric Company which operates and is regulated under its tariff approved by the State Public Utilities Commission (PUC). Similarly, Hawaiian Telecom (HTCO) operates and is regulated under a tariff approved by the PUC and was the sole provider of telecommunications services until the advent of cable television. Subsequently, Oceanic Time Warner Cable (OTWC), which is not regulated by the State PUC but is a franchisee of the Department of Commerce and Consumer Affairs (DCCA), has become a competitor to HTCO and, similar to HTCO, can offer broadband, cable television and telephone signals.

Under rights initiated during the Kingdom of Hawaii, in HECO's case, and during the government of the Territory of Hawaii, in HTCO's case, the infrastructure of both these companies may occupy public rights-of-ways. It has come to be generally accepted that the term "infrastructure" includes both overhead and underground facilities. Hawaii Revised Statute Article 440, established the ability for cable franchisees to occupy, subject to the rules and regulations imposed on the PUC-regulated utilities, to occupy public rights-of-ways. Roadway/Highway improvements projects initiated by the City and County of Honolulu and/or the State Department of Transportation which impact existing utility infrastructure usually have some formula under which the governmental agency, the utility and, in some cases, the landowners of property adjacent to the public right-of-way contribute to the cost of relocating the conflicting utility.

Hawaiian Electric Co.'s (HECO) existing generation system, on the Island of Oahu, is currently capable of providing approximately 1,215 Megawatts (Mw) of power with independent power producers capable of providing an additional 456 Mw of power for a total generating capacity of 1,671 Mw (based on 30 January 2015 Availability of Supply letter). Current peak demand on the Island of Oahu, as of December 2014, was 1,170 Mw.

HECO's, HTCO's, and OTWC's existing facilities serving this area consist of aerial cables attached to joint overhead pole lines on the northern sides of N. Vineyard Boulevard, N. King Street and the western side of Pua Lane. In addition, along the Liliha Street property frontage, HECO has an overhead pole line supporting its School-Iwilei 138 kV circuit. The latter HECO facility is utilized by HECO's Oahu Island grid and would not likely be used to serve the project site.

It should be noted that OTWC is not a member of the joint pole committee whose function is to oversee the placement and maintenance of utility poles throughout

Oahu and whose members consist of HECO, HTCO, the City (for City rights-of-ways) and the State (for State rights-of-ways). To obtain approval to attach to existing joint pole lines, OTWC must lease space from HTCO, if HTCO has joint ownership of the poles, or apply to HECO for permission to attach to poles where HTCO does not have joint ownership.

B. Criteria and Methodology

The off-site and on-site electrical and telecommunications utility lines will be placed underground, therefore the design of the duct system will be in accordance with the specifications and standard practices of the respective utility companies who will be utilizing the underground duct system and will, after inspection and acceptance by the respective utility company inspectors, be dedicated for use by the respective companies.

During the design phase a determination must be made, in consultation with the utility companies whether the electrical and telecommunications duct systems will be owned and maintained by the State and the State's lessee or whether these duct systems may be dedicated to the respective utility companies.

C. Projected Electrical Power and Telecommunications Demands

The total anticipated electrical demand load is 9,688 kVA (9.688 MW or approximately 9.7 MW) and is based on a peak, coincidental load of 3.5 kVA per residential unit and 14 VA per square foot for the proposed grocery store.

Based on current technologies, both HTCO and OTWC would likely provide service to the project via fiber optic cable pairs which would be terminated at hub equipment which would, in turn, provide the bundled telecommunications services to the individual residents and businesses.

D. Impacts and Mitigation

HECO has preliminarily indicated their existing 12 kV distribution lines currently providing service to the existing Mayor Wright Homes buildings have inadequate capacity to provide service to the proposed re-development. The probable point of service connection to the 25 kV source that has adequate capacity to serve the re-development is the Iwilei Transmission Substation located near the intersection of Dillingham Boulevard and Ka`a`ahi Street.

As a non-preferred alternative, HECO could elect to provide power to the site by deploying a dedicated 46 -12 kV substation on a site provided within the property. A 46 kV overhead line would need to be extended from the Iwilei Transmission Substation to energize the transformer. Based on HRS 269, if this alternative were selected, State Public Utilities Commission approval would need to be sought. Pending enactment of the Iwilei Special Design District TOD legislation, this 46 kV line might be required to be placed underground.

Both HTCO and OTWC have indicated that they would be able to provide service to the proposed re-development by reinforcing their existing aerial facilities with additional fiber optic strands. Pending enactment of the Iwilei Special Design District TOD legislation, a determination would need to be sought from the Department of Planning and Permitting whether the supplementary fiber optic lines could be added to the existing aerial joint poles or would be required to be placed underground.

E. Proposed Electrical and Telecommunications System

Off-site Electrical:
HECO's existing 25 kV duct system exits Iwilei Transmission Substation onto Kuwili Street. From this point, a new duct system containing 6-6" conduits and 6' x 14' manholes would be constructed by the project along: Kuwili Street; Iwilei Road; through the parcel (TMK No. 1-5-007:001) designated for the future Ka`a`ahi Street extension; Ka`a`ahi Street; Dillingham Boulevard; and Liliha Street to the mid-block entrance to the Mayor Wright Homes parcel. Pending further clarification from HECO, they have indicated that this 25 kV infrastructure would be required to be in service to energize the Phase 1 development. Temporary power for construction purposes would likely be available from their 12 kV overhead lines.

As this proposed off-site ductline would facilitate the overall TOD development of the Iwilei Area as envisioned by the City, there should probably be negotiations between the State and the City for cost sharing of the duct system construction costs.

On-site Electrical and Telecommunications:
The on-site electric and telecommunications systems would consist of concrete encased, PVC conduits, typically installed within a common trench and located, where feasible, under the roadway sidewalk between the curb and the edge of the road shoulder. Manholes and handholes would be placed periodically to serve as pulling points for the utilities and as parcel/building service points. The anticipated duct complement for the main infrastructure would consist of 3-6" and 2-4" conduits for HECO, 2-4" conduits for HTCO and 2-4" conduit for OTWC. The number and size of conduits would vary based on the adjacent building demands with the typical minimum conduit complement for building service connections being 2-4" conduits for HECO, 1-4" conduit for HTCO and 1-4" conduit for OTWC.

In addition to transformer pads for each of the buildings, HECO will require several switchgear pads throughout the property. The HECO switchgear acts as a protective device and sectionalizer that is used by HECO to minimize outages to the affected building as well as protect their main circuits. Both HTCO and OTWC will request hub equipment sites which are approximately 8' x 8' in size.

Area Lighting:
Illumination for at-grade roadways and parking spaces will be designed to meet Illuminating Engineering Society (IES) RP-8 criteria. Luminaires selected will be specified with conformance with Act 287 and be designed to minimize glare and provide illumination levels in conformance with the above stated criteria.

See Figure 14 for the Existing Electrical and Telecommunications System and Figure 15 for the Proposed Electrical and Telecommunications System.

8 PUBLIC ENGAGEMENT AND EIS CONSULTATION

8.1 Public Engagement through the Conceptual Master Plan Process

HPHA and the project team have participated in several rounds of public meetings and outreach for the proposed MWH Redevelopment including resident and community meetings, area Neighborhood Board meetings, and a week-long conceptual design charrette onsite at MWH. In addition, the team has met with various stakeholders including area legislators and councilmembers, businesses, schools, churches, public agencies, and service providers to discuss their concerns and wishes for the project and encouraged them to participate throughout the planning process.

The resulting community-based vision and conceptual master plan for MWH has been a collaborative effort with various forums for community involvement. From community meetings and the establishment of a Community Advisory Committee (CAC) to a weeklong design charrette held onsite at MWH, the residents and community have participated in the development of the proposed plan and shared their input and insights to help refine the concept and inform the project team as they move forward with this environmental review, permitting, and eventual implementation. The project team is grateful for all the support and invaluable insights generously shared and will continue to seek resident and community input as they move through the process. A list of the meetings held to date is provided below.

Neighborhood Board Meetings:

- April 20, 2016 Kalihi-Pālama Neighborhood Board Meeting – Kalihi Union Church at 7:00 p.m.
- May 9, 2016 Liliha/Puʻunui/ʻĀlewa/Kamehameha Heights Neighborhood Board Meeting – Maʻemaʻe Elementary School Cafeteria, 7:00 p.m.
- May 18, 2016 Kalihi-Pālama Neighborhood Board Meeting – Kalihi Union Church at 7:00 p.m.
- October 19, 2016 Kalihi-Pālama Neighborhood Board Meeting – Kalihi Union Church at 7:00 p.m.

State Legislators

- April 5, 2016 Senator Suzanne Chun Oakland – District includes Liliha, Pālama, Iwilei, Kalihi, Nuʻuanu, Pacific Heights, Pauoa, Lower Tantalus, Downtown; Chair of the Senate Human Services Committee
- April 6, 2016 Representative Mark Hashem, Chair of House Housing Committee
- April 6, 2016 Senator Breene Harimoto, Chair of Senate Housing Committee
- April 18, 2016 Representative Karl Rhoads, District 29 Representative (Kalihi, Pālama, Iwilei, Chinatown)

Councilmembers

- April 19, 2016 Councilmember Joey Manahan, Council District 7 (Kalihi-Pālama, Kalihi-Kai, Iwilei, Māpunapuna, Salt Lake, Āliamanu, Hickam, Foster Village, and portions of Pearl Harbor, Aiea, Kalihi Valley, and Liliha)
- August 17, 2016 Councilmember Carol Fukunaga, Council District 6 (Portions of Makiki, Downtown Honolulu, Punchbowl, Pauoa Valley, Nuʻuanu, ʻĀlewa Heights, Papakōlea, Fort Shafter, Moanalua, Hālawa, ʻAiea, Kalihi Valley, and portions of Liliha and Kalihi)

Residents

- May 6, 2016 at MWH (Kick-off Meeting)
- July 20, 2016 at MWH (repeat of Community Meeting #2, Concordia Workshop)

Public Community Meetings

- May 24, 2016 at Pālama Settlement (Community Meeting #1, Kick-off Meeting)
- June 28, 2016 at Pālama Settlement (Community Meeting #2, Concordia Workshop)
- August 8-12, 2016 at MWH (Community Meeting #3, Torti Gallas + Partners Charrette)
- June 20, 2017 at MWH (Community Meeting #4, Community Update Meeting)

Stakeholder Meetings and Interviews

- July 14, 2016 – Liliha Pālama Business Association
- August 8, 2016 City and County of Honolulu, Department of Planning and Permitting
- August 8, 2016 City and County of Honolulu, Board of Water Supply
- August 8, 2016 City and County of Honolulu, Department of Transportation Services and Department of Facilities Management
- August 9, 2016 Moss Construction
- August 9, 2016 Indigo Property Management
- August 9, 2016 Local Businesses through the Kalihi-Pālama Business Association
- August 10, 2016 Legislators (Senator Harimoto, Senator Chun Oakland, Representative Rhoads, Councilmember Manahan, Councilmember Fukunaga)
- August 10, 2016 Social Services (Hawaiʻi Literacy, Kalihi-Pālama Health Center, Pālama Settlement, Principal of McKinley High School, Salvation Army, State Office of Planning, Faith Action for Community Equity)
- August 10, 2016 Safety Service Providers, City and County of Honolulu, Fire Department and Police Department
- August 10, 2016 Department of Education, Facilities Department and Principal of Likelike Elementary School

Community Advisory Committee (CAC)

- July 28, 2016 (Kick-off Meeting)
- August 10, 2016 (Charrette Week Input)
- June 15, 2017 (Master Plan Overview and Discussion)

8.2 EIS Public Engagement

In the course of master planning for the MWH Redevelopment, consultation comments were solicited from agencies and organizations that may have an interest in the project. Consultation was conducted through various meetings, as outlined in Section 8.1. The purpose of these meetings is to consult with individuals, community organizations, private groups, and government agencies with technical expertise, or an interest or will be affected by the proposed action. This process was part of the development of the conceptual master plan and helped inform the preparation of the EIS.

8.2.1 Act 172-12 EISPN Consultation

Various Federal, State, and County agencies, as well as organizations and members within the community, were consulted with or provided comments on the EIS Preparation Notice (EISPN) which aided in the preparation of the Draft EIS and Final EIS.

The EISPN was distributed for review and input to the following agencies, organizations, and individuals indicated in the table below with a check mark (√). The EISPN was also available on the OEQC website and published in the September 23, 2016 edition of *The Environmental Notice*. The EISPN was also sent to various media outlets and libraries including all public regional libraries to provide availability to the public. The public comment period was from September 23, 2016 to October 24, 2016. If comments were received on the EISPN, the date of the comment is indicated in the table next to the respective agency, organization, or individual's name. Comment letters and the respective responses can be found in Appendix N.

8.2.2 EIS Scoping Meeting

In addition to the EISPN, an EIS scoping meeting was held on August 1, 2017. The following is a summary of the verbal comments received at the meeting and the responses.

- A question was asked about the triggers for a federal EIS. The project team responded that since the project is applying for HUD funding, it will require a federal review under the National Environmental Policy Act (NEPA) of 1969, as amended. Because the threshold for the EIS (as opposed to an EA) is the construction of 2,500 residential units, a federal NEPA EIS ~~will also be prepared~~ was anticipated for the project. However, since the scoping meeting, the number of units to be constructed will be 2,448 and the appropriate NEPA documentation will be completed as required. The NEPA ~~EIS~~ document will be prepared as a separate document and initial coordination with the local HUD office and the State Office of Environmental Quality Control (OEQC) is underway.
- A question was asked about ongoing property management and onsite social services. MWH Partners, LLC will manage MWH after construction and while too early to know exactly which social services will be onsite, they have started to reach out to community service providers about the services that will need to be provide to residents. This process is still ongoing and

will require a full community needs assessment but they are considering services such as child care, job training, language classes, and senior care. There are medical services right across the street with the Kalihi Pālama Health Center, and coordination with Hawai'i Literacy will continue since they are currently onsite at MWH.

- A question was asked about the amount of parking being provided given the project's location in a TOD zone. The project team responded that the current plan is to provide the number of stalls required by the City's regulations. However, there will be additional coordination with DPP during permitting and detailed design.
- A question was asked if the EIS will include a discussion about the impacts to existing school facilities. The project team confirmed that the EIS will and will require further discussions with the State Department of Education (DOE) since the initial discussions with the DOE have indicated that McKinley High School and Central Middle Schools might have the capacity.
- A question was asked if the EIS would include consultation with SHPD to comply with Section 106. The project team responded that yes, coordination with SHPD has been initiated and that the archaeological inventory survey, architectural history reconnaissance level survey, and cultural impact assessment have been prepared for both the State Chapter 6E and Federal Section 106 reviews.
- A question was asked about when the construction was anticipated to start. The project team responded that there are still several steps to be completed prior to construction and therefore the schedule is subject to change. However, the overall goal is to try to complete the Final EIS by the end of the year to prepare for the next legislative session and to begin the permitting process at the beginning of 2018.

In addition to the verbal discussion, one written comment card was collected at the meeting, which noted no comments at this time and that is was a good presentation. It is attached as Appendix O.

8.2.3 Draft EIS Consultation

The Draft EIS ~~will be~~ was sent to the following agencies, organizations, stakeholders, interested individuals, and elected officials. The final distribution list for the Draft EIS ~~has been~~ was confirmed by OEQC ~~prior to the publication date~~ on August 25, 2017. The Draft EIS ~~will~~ was also ~~be~~ sent to various media outlets and libraries including all regional public libraries to provide availability to the public. Comment letters received for the Draft EIS during the public comment period and corresponding responses ~~will be~~ are included in the Final EIS in Appendix P~~. Comment letters received for the Draft EIS will be incorporated and included in the Final EIS~~ as required by Section 343-5, HRS. The public comment period started on September 8, 2017 and closed on October 23, 2017. If comments were received on the Draft EIS, the date of the comment is indicated in the table next to the respective agency, organization, or individual's name. Three comment letters were received after the public comment period closed. All comment letters received up to the last one dated December 1, 2017 have been responded to and are incorporated in this EIS.

Subject: RE: Mayor Wright Vineyard access
Hi Kimi,

Thanks for the info from Sohrab, I agree with his findings, specifically the 4th bullet. I'm meeting with administration Thursday, then will get back to you. We may need something more formal than email. Will let you know.
Thanks again, Ken

Hi Ken: you weren't imagining things. We didn't include that specific analysis on the intersection, but here's Sohrab's response. Let us know if you need more done.
Mahalo,
Kimi

Subject: RE: Mayor Wright Vineyard access
Hi Kimi,
We did not specifically do the comparison that Ken is requesting. A few notes about that:

- The new "intersection" is really more of a driveway than an intersection since it is right-turn in and out only (RIRO). As such, we typically wouldn't study it from an operational perspective since it would result in a limited number of conflicts. The only noticeable delay would be experienced by vehicles waiting to turn right onto Vineyard from the project site.
- Most blocks on Vineyard west and east of the site have at least one RIRO driveway.
- The upstream intersection on Vineyard at Pua Ln (#6) will operate at LOS D or better with or without the new midblock intersection.
- The downstream intersection of Liliha St (#9) is already impacted with the midblock intersection and eliminating the proposed connection would reduce overall network connectivity. As such, operations would be similar to or likely worsen operations at Intersection 9.
- Lastly, DPP is trying to increase the street network density from an urban design perspective and make the entire area more walkable by breaking up longer

blocks visually and operationally.

All this being said, we can do the comparison as part of any future responses.

Sohrab

Hi Sohrab: did you folks do this analysis for Ken? I don't think you did for the TIAR… LMK. We'll need it for the next round. Thanks!

Subject: RE: Mayor Wright Vineyard access

Hi Kimi,

Possibly it's in the TIAR and I missed it, but couldn't find if the mid-block intersection helps or not. Looking for the Near-Term and Long-Term buildout conditions without Intersection 16 Project Dwy/ N Vineyard Blvd that compares with Near-Term and Long-Term buildout conditions with Intersection 16. The intersections that should be compared, at least, should be Intersections 6 and 9.

Let me know if there are any questions.

Thanks,

Ken

Hi Ken: please see the attached TIAR for the Mayor Wright Homes project and let me know if the new mid-block intersection on Vineyard is ok with the proposed mitigation. Sorry, I totally underestimated the file size… it's 22 MB so here's the dropbox location to the file.

https://www.dropbox.com/s/yaqk69psk6c2cnv/Mayor%20Wright_Final_MTA_20180108.pdf?dl=0

Let me know if you have trouble downloading the file.

Palama Street to Nuuanu Avenue Section
Request for Access

Thank you for your letter dated September 11, 2018, requesting access onto North Vineyard Boulevard.

Our research shows, there are no access restrictions along North Vineyard Boulevard in the area you are requesting the access opening. Therefore, no documentation of the access is required by our office. You may contact our Oahu District Office at (808) 831-6700 for a "Permit to Perform Work Upon State Highways." Construction drawings and/or other related items may be required for the permit. Please contact their office early in your planning.

If you have any questions, please contact Jessie Hayashi at (808) 692-7389.

Sincerely,

pp

Right-of-Way Manager

EXHIBIT 30

NOTICE OF AVAILABILITY
DRAFT ENVIRONMENTAL ASSESSMENT/FINDING OF NO SIGNIFICANT IMPACT (Draft EA/FONSI)
for the Mayor Wright Homes (MWH) Redevelopment Project in Honolulu, Hawai'i

LEAD AGENCY: Hawai'i Public Housing Authority (HPHA), State of Hawai'i
FEDERAL AGENCY: U.S. Department of Housing and Urban Development (HUD)
RESPONSIBLE ENTITY: Governor of the State of Hawai'i

ACTION: Notice of Availability (NOA) of the Draft Environmental Assessment (EA)/Finding of No Significant Impact (FONSI) for the Mayor Wright Homes Redevelopment Project, prepared in compliance with the National Environmental Policy Act (NEPA) of 1969, as amended (42 U.S. Code 4321 et seq.); the Council on Environmental Quality (CEQ) regulations implementing the procedural provisions of the NEPA, Title 40 Code of Federal Regulations (CFR) Parts 1500-1508; and the Department of Housing and Urban Development (HUD) Title 24 CFR Part 58 Environmental Review Procedures for Entities Assuming HUD Environmental Responsibilities.

SUMMARY: Pursuant to Title 40 CFR §1506.6, notice is hereby given that a Draft Environmental Assessment(EA)/Finding of No Significant Impact (FONSI) for the Mayor Wright Homes (MWH) Redevelopment Project in Honolulu, Hawai'i is available for public review.

The Hawai'i Public Housing Authority (HPHA) and its development partner, MWH Partners, LLC, propose to redevelop the existing Mayor Wright Homes (MWH) site, which consists of a ~14.8-acre parcel identified as TMK: (1)1-7-029:003. The site is bounded by four existing roadways: North King Street, Pua Lane, North Vineyard Boulevard, and Liliha Street (see attached Location Map).

The proposed project includes the demolition of the existing structures and the construction of a mixed-use community consisting of 2,448 residential rental units and up to 80,000 square feet of commercial space. This includes a one-for-one replacement of the existing 364 public housing units based on the number of bedrooms in each unit, as well as up to an additional 2,084 affordable and market rental housing units that can be offered to potential residents in a range of income levels. Two-thirds of the units will be long-term affordable housing units targeting those earning up to 120 percent of the Area Median Income (AMI). The commercial space will include a mix of retail, office space, and community services to support the new residential uses and complement the surrounding neighborhood. A series of open spaces are envisioned throughout the redesigned site including a new community center and park at the heart of the project.

Because the new water systems proposed for the MWH Redevelopment project would have the capacity to serve an additional 2,500 housing units, the project meets the threshold at which an Environmental Impact Statement (EIS) is required under 24 CFR 58.37(b). However, 24 CFR 58.37(c) states, "If, on the basis of an EA, a responsible entity determines that the thresholds in paragraph (b) of this section are the sole reason for the EIS, the responsible entity may prepare a [Finding of No Significant Impact] FONSI pursuant to 40 CFR 1501.4. In such cases, the FONSI must be made available for public review for at least 30 days before the responsible entity makes the final determination whether to prepare an EIS."

The sole reason the proposed project meets the threshold for an EIS is the capacity of the new and upgraded water and sewer systems under 24 CFR 58.37(b) and therefore, a Draft EA/FONSI has been prepared as required

under the aforementioned HUD regulations. This Notice of Availability announces the availability of the Draft EA/FONSI at the following locations for the required 30-day public review.

AVAILABILITY OF THE DRAFT NEPA EA/FONSI: Electronic copies of the Draft NEPA EA/FONSI are available for download and public review at the following websites:

- HUD Exchange Environmental Review Records: https://www.hudexchange.info/programs/environmental-review/environmental-review-records/
- State of Hawai'i Office of Environmental Quality Control (available starting February 23, 2020): http://oeqc2.doh.hawaii.gov/The_Environmental_Notice/2020-02-23-TEN.pdf

Printed copies of the Draft EA/FONSI will also be available for review at the following locations during regular business hours:

- Office of the Governor, State Capitol Executive Chambers, 415 South Beretania Street, Honolulu, HI
- State Library, 478 South King Street, Honolulu, HI
- Kalihi-Pālama Library, 1325 Kalihi Street, Honolulu, HI 96819
- University of Hawai'i Mānoa, Thomas H. Hamilton Library, Room 507, 2550 McCarthy Mall, Honolulu, HI 96822

DATES AND PUBLIC COMMENT: The 30-day public comment period will begin after publication of this Notice by the State of Hawai'i Office of Environmental Quality Control (OEQC) in *The Environmental Notice* on February 23, 2020 and will end on March 24, 2020.

If you would like to receive an electronic version on CD (*.PDF format) or a hard copy of the Draft EA/FONSI, please contact the Consultant using the information provided below.

ADDRESSES: You may submit comments using any of the following methods:

1) Email: MWH@pbrhawaii.com
2) Mail: Ms. Kimi Yuen, PBR HAWAII & Associates, Inc., 1001 Bishop Street Suite 650, Honolulu, HI 96813
3) Hand delivery: Same as mailing address above between 9:00 AM and 5:00 PM, Monday-Friday.

FOR FURTHER INFORMATION CONTACT: Kimi Yuen or Malachi Krishok, PBR HAWAII & Associates, Inc. at (808) 521-5631

MAYOR WRIGHT HOMES REDEVELOPMENT

Draft NEPA EA/FONSI – Notice of Availability and Posting for Public Comment

1. Draft EA/FONSI
    a. Preliminary FONSI Signed by Governor on 2/3
    b. Published in OEQC's *The Environmental Notice* on 2/23 initiating the 30-day public comment period, which ends on 3/24
        i. Electronic copies are available for download from the OEQC website: http://oeqc2.doh.hawaii.gov/Other_TEN_Publications/2020-02-23-OA-NEPA-DEA-Mayor-Wright-Housing-Redevelopment.pdf
        ii. PBR will check HUD HEROS website on or shortly after 2/29 (anticipated repair date).
    c. Hard Copies of the Draft EA/FONSI were delivered on 2/21 and are available for public review at the following locations:
        i. Office of the Governor
        ii. State Library – Hawai'i Document Center
        iii. Kalihi-Pālama Library
        iv. University of Hawai'i at Mānoa, Hamilton Library
    d. DPP also requested a hard copy for their internal review, which was delivered on 2/26.

2. Notice of Availability
    a. 4,214 Notice of Availability letters were mailed via USPS to government agencies and representatives, Native Hawaiian Organizations, and surrounding businesses and residents
    b. The Notice of Availability was published in the following newspapers:
        i. The Moloka'i Dispatch – Wednesday, 2/19
        ii. The Maui News – Saturday, 2/22
        iii. Star-Advertiser – Sunday, 2/23
        iv. Staradvertiser.com – Sunday, 2/23
        v. Hawai'i Tribune Herald – Sunday, 2/23
        vi. Hawaiitribuneherald.com – Sunday, 2/23
        vii. West Hawai'i Today – Sunday, 2/23
        viii. Westhawaiitoday.com – Sunday, 2/23
        ix. The Garden Island – Sunday, 2/23
    c. Notice of Availability flyers were distributed to public places and private businesses in the vicinity of the project site:
        i. Mayor Wright Homes (Barbara/Cynthia assisted)
        ii. Kapālama Satellite City Hall
        iii. Neighborhood Board Commission
        iv. Beretania Community Park
        v. Foster Botanical Gardens
        vi. Farrington HS
        vii. Honolulu CC
        viii. Likelike Elementary School
        ix. Kalihi-Pālama Library
        x. Pālama Settlement
        xi. Kalihi YMCA
        xii. Hawai'i Literacy
        xiii. Kalihi-Pālama Health Center
        xiv. Institute for Human Services
        xv. Parents and Children Together
        xvi. Liliha Professional Plaza
        xvii. Costco Iwilei
        xviii. Home Depot
        xix. Regal Theaters, Dole Cannery
        xx. Co-Cathedral of St. Theresa
        xxi. Hawai'i First Samoan Assembly of God
        xxii. Samoan Congregational Christian Church
        xxiii. Cedar Assembly of God

EXHIBIT 31

MAYOR WRIGHT HOUSING REDEVELOPMENT
Responses to Public Comments on the Draft NEPA EA/FONSI
May 8, 2020

A. PURPOSE

This summary documents the consideration of comments received on the Draft Environmental Assessment (Draft EA)/Finding of No Significant Impact (FONSI) for the proposed Mayor Wright Homes Redevelopment project. Availability of the Draft EA/FONSI for a 30-day public comment period was published in the State of Hawai'i's Office of Environmental Quality Control's (OEQC) *The Environmental Notice* on Februrary 23, 2020 and in newspapers statewide; and mailed to Federal, State, and local government stakeholders, and businesses and residents in the project vicinity (see attached distribution list). The Draft EA/FONSI was made available electronically online at the OEQC website (http://oeqc2.doh.hawaii.gov/Other_TEN_Publications/2020-02-23-OA-NEPA-DEA-Mayor-Wright-Housing-Redevelopment.pdf) and hard copies were provided at the following locations for public review during regular business hours:

- Office of the Governor, State Capitol Executive Chambers, 415 South Beretania Street, Honolulu, HI
- State Library, 478 South King Street, Honolulu, HI
- Kalihi-Pālama Library, 1325 Kalihi Street, Honolulu, HI
- University of Hawai'i Mānoa, Thomas H. Hamilton Library, Room 507, 2550 McCarthy Mall, Honolulu, HI

The 30-day public comment period on the Draft EA/FONSI closed on March 24, 2020. A total of 11 comment letters were received on or by the deadline. All were from public agencies or entities with the exception of one received from Spectrum, a local telecommunications company.

Although the Council on Environmental Quality ("CEQ") regulations do not require response to comments on a Draft Environmental Assessment, the United States Department of Housing and Urban Development (HUD) regulations (24 CFR §58.43(c)) require responsible entities to consider the comments of the public and make modifications, if appropriate, in response to the comments, before it completes its environmental certification and before the recipient submits its Request for Release of Funds (RROF). The following sections include the substantive comments received, responses, and summaries of modifications to the EA where applicable.

B. LETTERS RECEIVED WITH COMMENTS

Eight letters with comments were received on or by March 24, 2020 from:

- Federal Emergency Management Agency (dated February 20, 2020)
- US Fish and Wildlife Services (dated March 4, 2020)
- Spectrum (email received March 5, 2020)
- City & County of Honolulu Board of Water Supply (dated March 16, 2020)
- State of Hawai'i Department of Education (dated March 18, 2020)
- City & County of Honolulu Police Department (dated March 18, 2020)
- State of Hawai'i Department of Transportation (dated March 23, 2020)
- City & County of Honolulu Department of Planning and Permitting (dated March 24, 2020)

C. LETTERS RECEIVED WITH NO COMMENTS

Three letters with no comments or objections were received on or by March 24, 2020 from:

- University of Hawai'i at Mānoa (dated February 27, 2020)
- City & County of Honolulu Department of Design and Construction (dated March 3, 2020)
- State of Hawai'i Department of Human Services (dated March 16, 2020)

D. COMMENTS & RESPONSES

Compliance with 24 CFR §50.4, §58.5 and §58.6 Laws and Authorities

1. Airport Hazards – Clear Zones and Accident Potential Zones, 24 CFR Part 51 Subpart D

1.1 COMMENT – Hawai'i DOT – Airports Division:

The proposed project area is approximately two miles from the Daniel K. Inouye International Airport (HNL). All projects within five miles from Hawaii State airports are advised to read the Technical Assistance Memorandum (TAM) for guidance with development and activities that may require further review and permits.

> ***RESPONSE:***
> Mahalo for the comment regarding the Technical Assistance Memorandum (TAM). As advised, future development activities related to this project that require further review and permits will follow any relevant guidance in the TAM. This information will be added to the EA.

1.2 COMMENT – Hawai'i DOT – Airports Division:

Federal Aviation Administration (FAA) regulation requires the submittal of FAA Form 7460-1 Notice of Proposed Construction or alteration pursuant to the Code of Federal Regulations, Title 14, Part 77.9, if the construction or alteration is within 20,000 feet of a public use or military airport which exceeds a 100:1 surface from any point on the runway of each airport with its longest runway more than 3,200 feet. Construction equipment and staging area heights, including heights of temporary construction cranes, need to be included in the submittal.

> ***RESPONSE:***
> Mahalo for the comment regarding submittal of FAA Form 7460-1 Notice of Proposed Construction or Alternation (Title 14, Part 77.9). Because the nearest runway (26L) at Daniel K. Inouye International Airport is approximately 14,300 feet from the project site, which is within 20,000 feet, the project team recognizes that a FAA FORM 7460-1 will be required for future construction and will include construction equipment and staging area heights, including temporary construction crane heights in the submittal. This information will be added to the EA.

1.3 COMMENT – Hawai'i DOT – Airports Division:

Although the use of solar panels is not mentioned as part of the proposed building architecture, be aware that photovoltaic (PV) systems located in or near the approach path of aircrafts, can create a hazardous condition for pilots because of possible glint and glare reflected from the PV array. If glint or glare from the PV array creates a hazardous condition for pilots, the owner of the PV system shall be prepared to immediately mitigate the hazard upon notification by the HDOT-A

and/or FAA. PV systems have also been known to emit radio frequency interference (RFI) to aviation dedicated radio signals, thereby disrupting the reliability of air-to-ground communications. Again, the owner of the PV system shall be prepared to immediately mitigate the RFI hazard upon notification by the HDOT-A and/or FAA.

RESPONSE:

We appreciate the information regarding the potential hazards photovoltaic arrays may create for aircrafts. As the project moves into design and construction phases this information will be considered should photovoltaics be included in the project.

2. Flood Insurance - Flood Disaster Protection Act of 1973 and National Flood Insurance Reform Act of 1994 [42 USC 4001-4128 and 42 USC 5154a]

2.1 COMMENT - FEMA:

Please review the current effective Flood Insurance Rate Maps (FIRMs) for the City and County of Honolulu (Community Number 150001), Maps revised November 5, 2014. Please note that the City and County of Honolulu, Hawai‘i are participants in the National Flood Insurance Program (NFIP). The minimum, basic NFIP floodplain management building requirements are described in Vol. 44 Code of Federal Regulations (44 CFR), Sections 59 through 65.

RESPONSE:

This comment addresses the FIRM referenced in the Compliance with 24 CFR §50.4, §58.5 and §58.6 Laws and Authorities section of the draft Environmental Review Record in the Flood Insurance subsection (page 6 of 51). The Federal Emergency Management Agency (FEMA) issued a revalidation letter dated November 4, 2014 that includes the list of revisions to FIRM panel 15003C0354G. None of the revisions were located at or near the project site. The FEMA Flood Map Service Center website (https://msc.fema.gov/portal/home) was also checked again on April 8, 2020 for the latest FIRM panel and found the same FIRM panel. As such, the FIRM information included in Exhibit 2 for the site shows the special flood hazard areas for the project site. The November 4, 2014 revalidation letter has been added to Exhibit 2 and the above language has been added to the Flood Insurance section of the NEPA EA for clarity.

3. Clean Air Act, as amended, particularly section 176(c) & (d); 40 CFR Parts 6, 51, 93

3.1 COMMENT – Hawai‘i DOT – Airports Division

Due to the proximity of the airport to the project location, there is a potential for fumes, smoke, vibrations, odors, etc., that may result from aircraft operations over the proposed development.

RESPONSE:

Mahalo for the information on the potential for fumes, smoke, vibrations, odors, etc. due to the proximity of the site to the airport. No exceedances of any of the National Ambient Air Quality Standards have been recorded at any O‘ahu monitoring stations in the last 5 years. Furthermore, the HI2016AQD report, indicates that values for criteria pollutant from air samples collected from the Sand Island and Honolulu stations are below State and Federal ambient air quality levels.

4. Endangered Species Act – Endangered Species Act of 1973, particularly section 7; 50 CFR Part 402

4.1 COMMENT – USFWS, Pacific Islands Fish and Wildlife Office:
There is no federally designated critical habitat within the immediate vicinity of the proposed project. Our data indicate the following federally listed species may occur or transit through the vicinity of the proposed project area: endangered Hawaiian hoary bat (*Lasiurus cinereus semotus*); endangered Hawaiian petrel (*Pterodroma sandwichensis*), threatened Newell's shearwater (*Puffinus auricularis newelli*), and endangered Hawaii Distinct Population Segment (DPS) of the bandrumped storm-petrel (*Oceanodroma castro*).

4.2 COMMENT – USFWS, Pacific Islands Fish and Wildlife Office:
The Hawaiian hoary bat roosts in both exotic and native woody vegetation across all islands and will leave young unattended in trees and shrubs when they forage. If trees or shrubs 15 feet or taller are cleared during the pupping season, there is a risk that young bats could inadvertently be harmed or killed since they are too young to fly or may not move away.

To avoid and minimize impacts to the endangered Hawaiian hoary bat we recommend you consider incorporating the following applicable measures into your project description:

- Do not disturb, remove, or trim woody plants greater than 15 feet tall during the bat birthing and pup rearing season (June 1 through September 15).
- Do not use barbed wire for fencing.

Hawaiian seabirds may traverse the project area at night during the breeding, nesting and fledging seasons (March 1 to December 15). Outdoor lighting could result in seabird disorientation, fallout, and injury or mortality. Seabirds are attracted to lights and after circling the lights they may become exhausted and collide with nearby wires, buildings, or other structures or they may land on the ground. Downed seabirds are subject to increased mortality due to collision with automobiles, starvation, and predation by dogs, cats, and other predators. Young birds (fledglings) traversing the project area between September 15 and December 15, in their first flights from their mountain nests to the sea, are particularly vulnerable.

To avoid and minimize potential project impacts to seabirds we recommend you incorporate the following applicable measures into your project description:

- Fully shield all outdoor lights so the bulb can only be seen from below bulb height and only use when necessary.
- Install automatic motion sensor switches and controls on all outdoor lights or turn off lights when human activity is not occurring in the lighted area.
- Avoid nighttime construction during the seabird fledging period, September 15 through December 15.

RESPONSE:
We appreciate the confirmation that no federally designated critical habitats are within the immediate vicinity of the proposed project. The ERR has been revised to include all of the species listed that may occur or transit through the vicinity of the project area including the endangered Hawaiian hoary bat (*Lasiurus cinereus semotus*); endangered Hawaiian petrel (*Pterodroma*

sandwichensis), threatened Newell's shearwater (*Puffinus auricularis newelli*), and endangered Hawai'i Distinct Population Segment (DPS) of the bandrumped storm-petrel (*Oceanodroma castro*).

We also appreciate your inclusion of suggested mitigation related to the Hawaiian hoary bat and Hawaiian seabirds who may occur or transit through the project area. The impact code will be changed to 3 and the language in the mitigation section related to endangered and threatened species has been revised to include the recommended USFWS measures related to the Hawaiian hoary bat and Hawaiian seabirds. These changes can be found on pages 14-15 as Mitigation Measures in Attachment 10.

5. Historic Preservation - National Historic Preservation Act of 1966, particularly sections 106 and 110; 36 CFR Part 800

5.1 COMMENT – City & County of Honolulu DPP, Planning Division

It should be noted that all building permits will be routed to the Department of Land and Natural Resources Historic Preservation for review.

RESPONSE:

Mahalo for your comment regarding building permit review by the Department of Land and Natural Resources State Historic Preservation Division (SHPD). Language noting that all building permits will be routed to SHPD has been added to the discussion related to the National Historic Preservation Act of 1966, which can be found in the in the Mitigation Measures and Conditions Table on page 2 of Attachment 10.

6. Noise Abatement and Control – Noise Control Act of 1972, as amended by the Quiet Communities Act of 1978; 24 CFR Part 51 Subpart B

6.1 COMMENT – Hawai'i DOT – Airports Division

The subject development lies near the ingress and egress routes to HNL for both military helicopters and light civil aircraft. Most civil air operations occur during daylight hours; however, most military flight activity is day and night. The proposed site is within the 55 to 60 DNL (Day-Night Average Noise Level) noise contour. Additionally, existing development and any subsequent proposed project may be subject to single event noise from aircraft operations which may exceed the 65 DNL.

RESPONSE:

Mahalo for the information regarding noise generated from aircraft operations from Daniel K. Inouye International Airport (HNL). The DNL noise contour is referenced in the draft NEPA EA and it is noted that the Federal Aviation Administration (FAA) guidelines indicate that residential land uses are compatible with areas exposed to aircraft-related noise levels of less than 65 dBA Ldn. It is also noted that single event noise from aircraft operations exceeding 65 DNL may be audible at the project site, however single event noise levels as measured at the site were not found to be excessive during day or night time periods.

Environmental Assessment Factors [24 CFR 58.40; Ref. 40 CFR 1508.8 &1508.27]

7. Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design

7.1 COMMENT – City & County of Honolulu DPP, Transit-Oriented Development (TOD) Division

a. Conformance to TOD Planning: We support the identified goals and intended use of the Project as it is consistent with the Downtown Neighborhood TOD Plan principle to expand and provide housing opportunities and a range of housing types, and develop a vibrant mixed-use neighborhood with buildings oriented towards the streets. More specifically, the Project is also consistent with the development vision for the Iwilei station area within the TOD Plan.

b. Massing: While Attachment 9 addresses the massing alternatives, there is no comparable three-dimensional graphic in this document that represents the Project's actual preferred Conceptual Master Plan (CMP) (Figure 3).

c. Frontage: Regarding the Project's CMP (Figure 3), we commend that a number of proposed parking structures are being incorporated within residential blocks. However, we note that one parking structure fronts a sizable portion of Vineyard Boulevard. We strongly encourage that this structure be wrapped behind commercial and/or housing uses, especially on the ground floor. The TOD Plan designates mixed-use medium density along Vineyard Boulevard, Liliha Street, North King Street, and Pua Lane (Figure 2-4 of TOD Plan), while encouraging active frontages and requiring pedestrian-oriented design along Vineyard Boulevard, Liliha Street, and North King Street (Figure 2-5 of TOD Plan).

RESPONSE:

Mahalo for your support and confirmation of the project's consistency with the vision for the Iwilei station area within the Downtown Neighborhood TOD Plan. Regarding massing, while the exact location, design, or mix of uses for each structure beyond the conceptual level of design is not currently known, we have included a three-dimensional graphic that illustrates the preferred conceptual master plan. Please note that the exact building configurations, massing, and locations including the four high rises are subject to change and may vary from the image when constructed.

Mahalo for your recommendations on street frontages. Street frontages will be activated wherever possible with commercial uses or housing. Where there are parking structures facing streets, screen walls and landscaping will be used to mitigate this in order to keep construction costs lower. When all sides of parking structures are wrapped by such spaces, construction costs can increase due to required firewalls and mechanical ventilation systems, inefficient design related to single-loaded corridors, additional lighting, etc. Reducing these construction costs will help keep the units affordable. It will also reduce ongoing maintenance and operational costs. When parking structures are open to natural air and light, they can also help increase the feeling of safety within the parking structures. The screen walls where they occur will be designed to be visually interesting and streets will be landscaped to contribute to the pedestrian environment as outined in the TOD Special District Guidelines for Structured Parking and Podiums. Market demand will also dictate whether providing that much

commercial space is viable as vacant storefronts are also undesirable street frontages. Parking structures could also be designed with flat decks to provide flexibility of use and converted to commercial spaces along street fronts should demand develop in the future.

7.2 COMMENT – City & County of Honolulu DPP, Planning Division

The Final EA should refer to specific views on the Primary Urban Center Development Plan (PUC DP) Significant Public Views map and suggest proposed mitigation.

RESPONSE:

Mahalo for your comment regarding the PUC DP's Signficant Public Views map. Although not a required Environmental Assessment Factor for NEPA reviews, an analysis of this projects impact on viewplanes and a new Figure 31 showing the PUC DP Significant Panoramic Views has been added to the "Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design" section of the EA. The analysis notes that the MWH Redevelopment may impact distant panoramic views of natural landmarks such as Lēʻahi Crater, Pūowaina Crater, Āliamanu Crater, and the Koʻolau Mountain Range from certain viewpoints. As such, an impact score of 3 is identified in the EA factors analysis in Attachment 6 and mitigation is included in Attachment 10. This mitigation section includes the following discussion and measures:

> "Visual impacts from the project must take into consideration the highly urban nature of this viewshed with buildings in Downtown Honolulu extending up to about 430 feet in height. While views to specific landmarks from various viewpoints within the Primary Urban Center may be altered by the proposed project, the overall urban character of this viewshed will not be significantly altered. The plan attempts to mitigate visual impacts by:
>
> - Providing fewer towers with low- and mid-rise buildings comprising most of the street-facing building massing and space between the towers to preserve distant views where possible;
> - Activating the street level views with landscaping and pedestrian-friendly streetscapes, commercial uses, and lower- and mid-rise residential buildings where possible;
> - Creating a more interesting skyline by varying building heights;
> - Setting the towers 50 feet back from Pua Lane and Liliha Streets to minimize their visual impacts from the street level of adjacent neighborhoods; and
> - Orienting the towers with their narrower sides facing the mauka and makai sides of the site and their wider side facing east and west to preserve mauka to makai views."

7.3 COMMENT – City & County of Honolulu DPP, TOD

We stand by our previous comments in the Department of Planning and Permitting's (OPP) letter dated October 25, 2017, for the Project's Hawaii Revised Statutes Chapter 343 Final EIS requirement (2017/ELOG-1820), which included more details.

RESPONSE:

We have attached your October 25, 2017 comment letter from the state EIS process and related response letter as a new Exhibit 33 in the NEPA EA.

7.4 COMMENT – City & County of Honolulu DPP, Land Use Permit Division

The Final EA should include the Project's status of the 201H process; describe the proposed program phases.

RESPONSE:

Updated language stating that the project team anticipates submitting the 201 H application to DPP in Spring 2020 has been added to the EA section, "Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design," which is included in the EA as attachment 6 and added to the Mitigation Measures in Attachment 10.

The proposed phasing plan estimates that the site will be redeveloped in five phases, each taking roughly two years to complete for a total of 10+ years.

8. Soil Suitablity Soil Suitability / Slope/ Erosion / Drainage and Storm Water Runoff

8.1 COMMENT – City & County of Honolulu DPP, Civil Engineering

a. A trenching permit may be required.
b. A drain connection license is required.
c. The Project shall comply with the prevailing "Rules Relating to Water Quality." The Project is categorized as Priority A.
d. The Project shall comply with the prevailing "Storm Drainage Standards." The effects of sea level rise shall be addressed in the drainage report.

RESPONSE:

Mahalo for the comment. We acknowledge that trenching permits and drain connection license will be required for the project. As discussed in the in the "Soil Suitability/ Slope/Erosion/ Drainage/Storm Water Runoff" EA section, the project's engineering team will coordinate with the City to ensure that the project is designed to comply with the prevailing "Rules Relating to Water Quality" (noting the project is categorized as Priority A) and "Storm Drainage Standards." Additional language has been added the section clarifying that the effects of sea level rise will be addressed in the projects drainage report(s).

9. Educational and Cultural Facilities (Access and Capacity)

9.1 COMMENT – Hawai'i Department of Education (HIDOE)

The MWH Partners, LLC should continue discussion with HIDOE to address impacts on student relocation during Project demolition and execute an educational contribution agreement to satisfy school impact fee requirements.

RESPONSE:

We appreciate this comment and HIDOE's engagement in the planning process to-date. As the project moves into design and construction, MWH Partners will continue discussions with HIDOE regarding impacts on student relocation and transition during the various phases of this project. MWH Partners will coordinate with DOE to execute the educational contribution agreement to satisfy the school impact fee requirements. This information will be added to the EA.

10. Waste Water and Sanitary Sewers (Feasibility and Capacity)

10.1 COMMENT – City & County of Honolulu DPP, Wastewater Branch

Wastewater Branch: The previously approved Sewer Connection Application (2017/SCA-0438) has expired. Please submit a new Sewer Connection Application for approval.

RESPONSE:

We appreciate the notice that the previously approved Sewer Connection Application (2017/SCA-0438) has expired. The project team has submitted a new Sewer Connection Application for approval to DPP Wastewater Branch and will continue this process for each of the development phases.

11. Water Supply (Feasibility & Capacity)

11.1 COMMENT – City & County of Honolulu Board of Water Supply (BWS)

a. The existing water system is adequate to accommodate the domestic demands and off-site fire protection to the proposed redevelopment. However, please be advised that this information is based upon current data, and therefore, the Board of Water Supply (BWS) reserves the right to change any position or information stated herein up until the final approval of the building permit application. The final decision on the availability of water will be confirmed when the building permit application is submitted for approval.

b. BWS may waive the Water System Facilities Charges (WSFC) and new meter cost for qualified on-site affordable or homeless dwelling units, up to 500 dwellings units per year, on a first come first served basis. The waivers will be granted when the building permit is submitted for approval. To qualify, the dwelling units must be certified as either affordable or homeless dwelling units by the appropriate agency of the City and County of Honolulu and the certification must be provided when the building permit application is submitted for BWS review and approval. For non-qualifying units, the applicant will be required to pay our WSFC for resource development, transmission and daily storage.

c. Water conservation measures are required for the proposed redevelopment. These measures include utilization of non-potable water for irrigation using rain catchment, drought tolerant plants, xeriscape landscaping, efficient irrigation systems, such as a drip system and moisture sensors and the use of water sense labeled ultra-low-flow water fixtures and toilets.

d. As proposed in Exhibit 25 of the MWH Draft Environmental Assessment, Preliminary Engineering Report, Figure 13, we acknowledge that the existing 12-inch water main running through the property along North Kukui Street, between Pua Lane and Liliha Street, will be cut and plugged. A new potable water connection will be made to the 12-inch distribution main and a 10-inch master meter is to be installed at the intersection of North Kukui Street and Liliha Street. The construction plans should be

submitted for BWS review and approval. The construction schedule should be coordinated with BWS to minimize impacts on the water system.

e. The proposed project is subject to BWS Cross-Connection Control and Backflow Prevention requirements prior to the issuance of the Building Permit Applications.

f. Proposed mixed use developments are required to install separate domestic water meters and laterals serving the residential and non-residential spaces.

RESPONSE:

Mahalo for confirming that the water system is adequate to accomodate the water demands associated with the proposed redevelopment. We understand that the final decision n the availability of water will be confirmed when the building permit application is submited for approval.

Mahalo for the information regarding the Water System Facilities Charges and new meter waivers. The project team will take this into consideration for the qualifying affordable units in the proposed redevelopment.

As noted in the "Water Supply" analysis in the Environmental Assessment Factors table included as Attachment 6, all efforts will be made to include water reducing design elements in the proposed proiect. The project team will coordinate with BWS to minimize impacts on the water system throughout the construction phases and submit construction plans for BWS review and approval including required cross-connection controls, backflow prevention, and separate domestic water meters and laterals. Furthermore, the project design will comply will all applicable City standards at the time building permits are submitted to DPP and the project design team will coordinate with BWS and other relevant departments leading up to the submittals to ensure compliance with requirements.

12. Public Safety – Police, Fire and Emergency Medical

12.1 COMMENT – BWS

The on-site fire protection requirements should be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department.

RESPONSE:

Mahalo for your comment regarding fire protection. As noted in the "Public Safety" analysis in the Environmental Assessment Factors table included as Attachment 6, onsite fire protection requirements will be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department and the design of the future facilities will meet Honolulu Fire Department requirements.

13. Transportation and Accessibiity (Access & Capacity)

13.1 COMMENT – Hawai'i Department of Transportation, Highways Division (HDOT-HWY)

We support the redevelopment project and the long-term beneficial impacts on multimodal transportation; however, the additional 8,000 (approximate) daily trips would have adverse impacts on State roadways. Roadway improvements to mitigate the impacts are proposed, but they have not been approved by HDOT-HWY. Clarify the rationale for the impact code of "2, No impact anticipated" for Transportation and Accessibility (Attachment 6) in the context of NEPA guidance for U.S. Department of Housing and Urban Development.

RESPONSE:

Mahalo for catching this inconsistency between the selected impact code and described impacts related to the transportation systems accessiability and capacity. The impact code has been revised to level 3 – "Minor Adverse Impact – May require mitigation." Additionally, language clarifying that state roadway improvement to mitigate adverse impacts related to additional vehicle demand are subject to HDOT-HWY approval has been added to the discussion of mitigation measures in Attachment 6 and Attachment 10.

13.2 COMMENT – HDOT-HWY

The proposed driveway on North Vineyard Boulevard has not been approved by HDOT-HWY. The distance between Pua Lane and Liliha Street intersections is approximately 1,000 feet. The proposed driveway is approximately midway between the two intersections. New driveways on principal arterials is generally discouraged, especially when the driveway is 500 feet or less distance from the nearest intersection. In this case, the driveway is about 500 feet from two intersections. The proposed right-in-right-out restriction at the proposed driveway reduces the potential impact. Mention in the EA that the proposed access and mitigation are subject to HDOT-HWY approval.

RESPONSE:

Mahalo for your comment regarding the new driveway proposed on Vineyard Boulevard. Please note that in emails from June 2018 with Ken Tatsuguchi, State Department of Transportation (DOT), Highways Division Planning Branch, he confirmed that DOT Administration was agreeable with this mid-block intersection on Vineyard Boulevard. Please see Exhibit 29 in the NEPA EA. We have also attached a letter dated October 3, 2018 from Chris M. Yamamoto, DOT Right-of-Way Manager (Reference HWY-RM 3.94776) in this exhibit that states there are no access restrictions along North Vineyard Boulevard in the area of the project and that no documentation of the access is therefore required by their office.

13.3 COMMENT – HDOT-HWY

The project will be responsible for providing the transportation improvements as recommended in pages 64-67 of the 2018 MTA (subject to final approval of HDOT). Mitigation for direct impacts to State roadways will be provided at no cost to the State. Regional improvements will be provided on a pro-rated basis. These improvements shall be constructed on a schedule acceptable to the HDOT-HWY.

RESPONSE:

Language clarifying the project's relative responsibilities for roadway improvements, as recommended in the 2018 MTA has been added to the Mitigation Measures in Attachment 10.

13.4 COMMENT – HDOT-HWY

Provide the total number of parking spaces proposed in the current conceptual design. The HDOT-HWY supports Travel Demand Management strategies to reduce the number of parking spaces and trips generated.

RESPONSE:

Mahalo for the comment regarding total number of parking space proposed in the Project's conceptual design. The following text has been added to the "Transportation and Accessibility" section of the Envrionmental Assessment Factors table in Attachment 6:

> "Off-street parking is proposed as structured parking to increase site efficiencies. The number of parking stalls are estimated at a minimum of 2,448 parking stalls based on City's TOD ordinance and up to roughly 3,300 stalls depending on the needs of the commercial uses and residential demand for parking. This includes resident, guest, and ADA-accessible stalls. The parking may also be decoupled from non-public housing residential units in order to give future residents the option of having or not having a parking stall, given the easy access to public transportation and proximity to job centers."

Mahalo for your comment supporting the proposed mitigation measures related to transportation demand management strategies. As noted, efforts will be made which may lead to reduced trips generated and use of alternative modes of transportation.

13.5 COMMENT – HDOT-HWY

The potential overlap of project construction with the Honolulu Authority for Rapid Transportation (HART) facilities (alignment and Iwilei Station) construction on Dillingham Boulevard could result in indirect and cumulative adverse impacts to State roads, including freight corridors. The HART construction would not be adjacent to the project site but would likely divert traffic to roadways in the vicinity. Identify the potential impact of overlapping project and HART construction in the EA. As mentioned in the Draft EA, a Traffic Management Plan (TMP) is required and coordination among stakeholders is important for mitigating these impacts.

RESPONSE:

The current HART rail construction involves the relocation of utilities (also known as the City Center Utility Relocation) in the Dillingham Boulevard corridor and the closure of one lane in each direction on that roadway for an estimated period of two years. This construction configuration, also known as the Controlled Access scenario, is expected to divert traffic to other streets including N. King Street, Liliha Street, and N. Vineyard Boulevard adjacent to the Mayor Wright Housing project site. This diversion would primarily occur in the peak commute periods with lower levels of diversion expected outside the peak periods. Subsequent to utility relocation, the rail guideway will be constructed in the Dillingham Boulevard corridor. Because the Mayor Wright Housing project will be built in phases over an extended period of time, traffic conditions on the surrounding streets are expected to change due to HART construction activities and cannot be reasonably projected at this time.

However, prior to construction being initiated on the Mayor Wright site, the project will prepare a construction traffic management plan (CTMP) to address how trucks and construction worker traffic will access and circulate around the project site. The current conditions on streets fronting the site at the time project construction is initiated will be used to make recommendations on construction traffic circulation, time periods to avoid, and other management strategies. The CTMP will be made available for review and comment by City and County Department of Planning and Permitting (DPP) and State of Hawaii Department of Transportation – Highways Division (HDOT-HWY) staff because both agencies will need to authorize encroachment and/or building-related permits. At that time, the project contractor will work with the affected agencies and coordinate with stakeholders to minimize construction traffic impacts, identify any potential circulation issues, and implement strategies to reduce or eliminate impacts.

Language reflecting the response above has been added to the EA factors analysis for "Transportation and Access" in Attachment 6 and the "Transportation" section of the "Mitigation Measures and Conditions" table in Attachment 10.

13.6 COMMENT – HDOT-HWY

Describe pipeline and other infrastructure alignments that may be removed or constructed within the HDOT Right-of-Way (ROW). A Use and Occupancy Permit approved by the HDOT Highways Division, ROW Branch is required for proposed use of the ROW. Add this to the list of permits, if applicable.

RESPONSE:

Proposed improvements affecting the surrounding city and state road rights-of-way include new private driveway and sidewalk connections and underground and overhead utility infrastructure. The proposed underground utility infrastructure includes gravity sewer and water service improvements within Pua Lane, N. King Street and Liliha Street. Underground electrical primary distribution facilities are proposed within N. King Street as well as Liliha Street and Dillingham Boulevard. Language has been added clarifying that access requests, as required, and construction plans will be submitted to the HDOT Highways Division and to DPP for approval. HDOT Use and Occupancy Permits will be obtained for the improvements within state rights-of-way. These changes can be found in the "Transportation" section of the "Mitigation Measures and Conditions" table in Attachment 10.

13.7 COMMENT – HDOT-HWY

As noted in the Draft EA, a Permit to Perform Work Upon State Highways and TMP be required for any work within the State ROW. Construction plans prepared by a Hawaii licensed engineer shall be submitted for review and approval prior to applying for a permit to perform work.

RESPONSE:

The project team includes and will include engineers licensed in the state of Hawaii who will prepare the project's construction plans and will coordinate with HDOT on plan submittals, reviews, and approvals. This language has been added to the EA in the "Transportation" section of the "Mitigation Measures and Conditions" table in Attachment 10.

13.8 COMMENT – Honolulu Police Department (HPD)

The Honolulu Police Department (HPD) anticipates short-term impacts to vehicular traffic around the project area. The HPD recommends that all necessary signs, lights, barricades, and other safety equipment be installed and maintained by the contractor during the construction phase of the project. Based on the report, an additional 2,084 housing units will be added to this redevelopment project to include retail/office space and community services areas. The HPD would like to be included when these sections are to be planned or discussed with the stakeholders in the area, as there may be a need for additional police services.

RESPONSE:

Mahalo for your comments regarding short-term impacts to vehicular traffic and recommendations to mitigate these impacts. This information has been added to the EA in the "Transportation" section of the "Mitigation Measures and Conditions" table in Attachment 10. The project team will be sure to coordinate with HPD as the project moves through implementation of the project.

Public Outreach [24 CFR 58.43]

14. Stakeholder Outreach

14.1 COMMENT - Spectrum

Spectrum would like to participate in the planning of this project to determine the extent of any relocation to the existing aerial and underground facilities. Spectrum is also requesting to be included in any coordination/planning meetings with the other utilities. Spectrum currently maintains coax and fiber facilities both aerial and underground within the project area; however, services provided for residential, commercial, DOE, State and County entities extend beyond the project's boundaries. Should you have any questions or concerns, please feel free to contact me.

Response:

Mahalo for your comments. We understand the concerns with your existing infrastructure. The project design team will coordinate with Spectrum as more detailed design and planning is developed for the various construction phases.

E. PHONE CORRESPONDENCE

In addition to the written comments, six phone calls were received in response to the Draft EA/FONSI. A Phone Correspondence Record of the discussions is attached to the EA as Exhibit 32.

PHONE CORRESPONDENCE RECORD

DATE: March 24, 2020

SUBJECT: Mayor Wright Homes (MWR) Redevelopment Draft EA/FONSI Questions and Comments Received via Telephone between February 19, 2020 and March 24, 2020

1. February 19, 2020 2:53 PM – Andrew Nakoa

a. Andrew Nakoa, current MWH resident, called with a concern regarding water ponding under his car in the existing MWH parking lot and the potential issue with groundwater infiltration at the future redevelopment. The location of his parking stall is on the Vineyard Blvd. side of the site. (Received by Kimi Yuen)

b. Response: This may be an issue that current management could assist with as the location of his current parking stall is at the higher elevation of the site. The future project will be designed to manage drainage, but his concern will be noted and shared with the project team with regards to the design of future development.

2. February 19, 2020 3:26 PM – Trina

a. Trina, a current resident, asked about the project timing. She recently moved to a unit that she hopes will be in a later phase of construction. (Received by Kimi Yuen)

b. Response: the exact timing is still unknown. However, the NEPA EA and 201H application is targeting completion by this year so design and construction would follow.

3. March 2, 2020 8:20 AM – Māhealani

a. Māhealani, a current resident, called to ask whether her building, building 19, is slated to be demolished soon and whether she will receive any help relocating when it is demolished. (Received by Malachi Krishok)

b. Response: The phasing of the phasing of the project is still being planned, but any demolition and relocation of residents will not occur this year. When a relocation schedule is planned and accepted the residents will be given advanced notice and will receive assistance relocating to different housing from HPHA. Once the new public housing units are built, current residents will have the option to return.

4. March 5, 2020 9:41 AM – Mi Ja Kim

a. Mi Ja, a current MWH resident, asked if the housing project had been purchased and if she would have to move or re-apply with a credit check to live there in the future. (Received by Malachi Krishok)
b. Response: The project is a redevelopment project for Mayor Wright Homes and is a partnership between the HPHA and a private developer. The public housing currently existing will be replaced and made available in the new development. Current residents will have the option to return.

5. March 20, 2020 3:10 PM – Matt

a. Matt, a current resident of MWH, called to find out more about the redevelopment project and timing. (Received by Kimi Yuen)
b. Response: The existing MWH will be redeveloped in phases into a mixed-use, mixed income community with a one-for-one replacement of the existing public housing units based on the number of bedrooms. The housing units will all be rentals with two-thirds targeted for affordable housing for those earning up to 120% area median income (AMI). The project is still going through environmental review and permits, and residents will be notified in advance of when demolition and construction will occur. The development partner will also be in touch to help with transition and relocation of existing residents.

6. February 18, 2020 – Cynthia Delima message

a. Several attempts were made to call back Ms. Delima but have not been successful as her voice mailbox has been full and no one has picked up the line.

This is our understanding of the topics discussed and the conclusions reached.

Dear Ms. Yuen:

SUBJECT: Draft Environmental Impact Statement (DEIS)
Mayor Wright Homes (MWH) Redevelopment; Tax Map Key: 1-7-029:003

In response to your letter dated September 5, 2017, soliciting comments on the DEIS for the MWH Redevelopment in the Kalihi area of the Primary Urban Center, the Department of Planning and Permitting (DPP) offers the following comments. In general, the DPP supports the MWH redevelopment project and its effort to increase much needed affordable housing, while improving the livability of this urban neighborhood.

Conformance with Existing Plans

1. The proposed redevelopment is consistent with the General Plan (GP) as described in Section 5.3.1 of the DEIS.

2. The proposed redevelopment is consistent with the Primary Urban Center Development Plan (PUC DP), especially Section 2.3 (The PUC Offers In-Town Housing Choices for People of All Ages and Incomes) and Section 3.2.2.3 (Policies for In-Town Residential Neighborhoods). Section 5.3.2 of the DEIS also describes the project's conformance to PUC DP.

3. The DEIS identifies the planned energy-efficient and sustainable building practices that are being considered for this project, including optimal siting and natural ventilation and lighting, water use reductions through low-flow fixtures, efficient irrigation, Energy Star appliances, and other elements. These design features are supported by the GP Housing Objective A, Policy 10 (Promote construction of affordable dwellings which take advantage of O'ahu's year-round moderate climate), and the PUC DP Policies 4.1.2 (Adapt water conservation

practices in the design of new developments and modification of existing uses, including landscaped areas), and 4.3.2 (Promote and implement energy conservation measures and integrated resource planning).

4. The DEIS describes the potential impacts of the project on viewsheds that are identified as significant in the PUC DP, especially view objects such as the Koʻolau Mountain Range, Lēʻahi Crater (Diamond Head), and Pūowaina Crater (Punchbowl), and lists potential mitigation measures. The project should make every effort to implement mitigation measures as described in Section 4.6 of the DEIS.

5. The proposed redevelopment is also consistent with the recently adopted Downtown Neighborhood Transit-Oriented Development (TOD) Plan principle to expand and provide housing opportunities and a range of housing types, and develop a vibrant mixed-use downtown. The project is also consistent with the development vision for the Iwilei station area. Section 5.3.4 of the DEIS also describes the project's conformance to the TOD Plan.

   Section 5.3.3 of the Final Environmental Impact Statement (EIS) should specify that the Downtown TOD Plan was adopted under City Council Resolution No.16-247, CD1, FD1, on September 6, 2017.

6. Because the DEIS states that two-thirds of the current senior population of MWH are physically disabled, the project should incorporate recommendations from the Honolulu Age-Friendly City Action Plan. Appropriate plans may include zero-step entrances for ground-floor units and other accessible universal design measures, indoors and out.

Land Use Permitting

7. The MWH redevelopment should make every effort to meet or approximate City park requirements and open space policies by including active and passive recreation opportunities, public and private open spaces, and visual access to green spaces within the development.

8. The Final EIS should fully explain what modifications or waivers will be sought from City codes and requirements, including the zoning code, fees, and park dedication. It should also include a full exploration of the permits that could be utilized for the project, and a determination of which permits the Applicant intends to use. For example, as a public use and structure, the project could qualify for a Zoning Waiver to waive zoning requirements under the provisions of Chapter 21-2.130 of the Land Use Ordinance (LUO). As an affordable housing project, it could qualify for exemptions under a Chapter 201H approval.

Because it is within the area covered by the TOD Plan and the future TOD Special District, it could qualify for an Interim Planned Development-Transit (IPD-T) permit.

9. The Applicant is exploring use of more than one land use permit to accomplish the plan (i.e., Chapter 201H and/or IPD-T). The Final EIS should explain the planned permitting strategy and which provisions can be approved or modified through that permit or permits.

Project Master Plan

10. Figure 1, the "Conceptual Master Plan," should provide additional detail. Information regarding the use of each area or building should be shown on the plan. In addition, we request that the corner of the project at King Street and Liliha Street be considered as a major entry focal point to MWH, as well as a placemaking and wayfinding element for the neighborhood.

11. Section 2.3.1 of the DEIS states that the project will include a building with as many as nine stories and range up to 380 feet in height. We suspect that some of the planned towers will be more than nine stories high. The Final EIS should clarify this.

12. The DEIS should provide elevation or renderings of the project from public vantage points, such as surrounding roadways and open spaces.

13. Any proposed tall buildings in the Final EIS should take into consideration the shadow impact on adjacent low-rise buildings, especially across Pua Lane.

14. Consider implementing proposed community amenities (community park, community center, multi-purpose hale) in earlier phases of the project.

Connectivity

15. Figure 1-3 of the TOD Plan shows a "Proposed Street" extending Desha Lane from King Street to North Vineyard Boulevard. We note that the MWH Conceptual Plan will not accommodate this proposed street and should be addressed in the Final EIS. The Traffic Impact Report should provide an analysis that includes this "Proposed Street." At minimum, a pedestrian and bicycle connection should be considered from Desha Lane.

16. High-quality pedestrian facilities and safe, convenient access to transit centers are essential components of successful TOD. While the DEIS has offered limited pedestrian infrastructure upgrades, the Applicant should consider

additional off-site improvements to North Vinyard Boulevard, Liliha Street, North King Street, and Dillingham Boulevard, including the busy Dillingham Boulevard/North King Street/Liliha Street intersection and the North Vineyard Boulevard/Liliha Street intersection, to encourage non-vehicular trips and improve access to the future Iwilei rail station.

17. The sidewalks along external streets should be designed and landscaped as envisioned in Section 4.2 of the TOD Plan. Canopy trees should be provided for sun shading, and planter strips with street trees should be located between the street curb and sidewalk to buffer pedestrians from vehicular traffic.

18. Convenient and secure bicycle parking within the MWH development should be a part of the bicycle facilities improvement in the Final EIS. Provision of bike share sites is also recommended.

Parking

19. Page 2-12 of the Draft EIS, related to parking, states that the number of parking stalls constructed will be based on City and County of Honolulu standards. However, it also suggests that the IPD-T permit process, which allows for modifications to these standards, could be used to reduce parking. The Final EIS should specify the number of parking stalls currently on the site, the approximate number that will be provided with the redevelopment project, the number required under the LUO, and a comparison of these numbers. It may be useful to know how many current tenants own cars and discuss future demand for parking spaces.

20. If the Applicant pursues an IPD-T permit, the TOD Plan recommends that existing parking requirements be reduced by at least 50 percent from current LUO requirements. Projects that provide conventional levels of parking will attract residents, commercial tenants, and customers who do not plan to walk, bike, or take transit, and the resulting traffic will overwhelm already crowded, existing area streets. Car share programs and facilities such as passenger drop-offs and pick-ups should be encouraged on-site for convenience and reduce necessity for car ownership. Projects that do not reduce their parking provision should not be allowed to build beyond the densities allowed under current zoning.

Traffic Review

While not necessarily required for the FEIS, the following comments below, Nos.21. – 30., should be addressed in future discretionary permits downstream.

21. An overall timeline should be provided for the five proposed phases of the development. This overall timeline should include the components of each phase. Each of the five phases should have its own timeline or phasing plan of the anticipated dates to obtain major building permit(s) for demolition/construction work, including the projected date of occupancy, prepared by the Applicant in a format acceptable to the DPP. The timeline should identify when the construction management plan (CMP), the traffic management plan (TMP), updates and/or validation to the findings of the initial traffic impact analysis report (TIAR), and off-site roadway work will be submitted for review and approval in relation to when approvals for construction plans, building and occupancy permits will be necessary. Typically, the CMP should be submitted for review and approval prior to the issuance of demolition/building permits for major construction work. The TMP or subsequent updates should be submitted and approved prior to the issuance of the (temporary) certificate of occupancy. An updated TIAR, including supplemental studies or subsequent updates, should be submitted and approved for each phase, or for every 500 residential units after the (temporary) certificate of occupancy. A new TIAR may be required if there is a significant change to the scope or timing of the major work items contained in the initial report. It is recommended that this overall timeline be provided to DPP as soon as possible.

22. The CMP shall identify the type, frequency, and routing of heavy trucks and construction related vehicles. Every effort shall be made to minimize impacts from these vehicles and related construction activities. The CMP should identify and limit vehicular activity related to construction to periods outside of the peak periods of traffic, utilizing alternate routes for heavy trucks, provisions for either on-site or off-site staging areas for construction related workers and vehicles to limit the use of on-street parking around the project site, and other mitigation measures related to traffic and potential neighborhood impacts. Preliminary or conceptual traffic control plans should also be included in the CMP. The Applicant shall document the condition of roadways prior to the start of construction activities and provide remedial measures, as necessary, such as restriping, road resurfacing, and/or reconstruction if the condition of the roadways has deteriorated as a result of the related construction activities.

23. A TMP shall include traffic demand management (TDM) strategies to minimize the amount of vehicular trips for daily activities by residents and employees. TDM strategies could include carpooling and ride sharing programs, transit, bicycle and pedestrian incentives, and other similar TDM measures. A pedestrian and bicycle circulation plan should also be included to provide accessibility and connectivity to and along the surrounding public sidewalks and at street intersections, as it relates to complete streets and access to the Iwilei rail station. A post TMP will be required after the near term build-out, and after

full build-out, to validate the relative effectiveness of the various TDM strategies identified in the initial report.

24. Updates to the TIAR will be required approximately one year after the issuance of the certificate of occupancy for each phase, or for every 500 residential units, to validate the traffic projections, trip reduction rates, distribution, and assignment contained in the initial TIAR. If additional traffic mitigation measures or modifications are necessary to support related traffic impacts directly attributable to this development, the Applicant will be required to implement these measures. TIAR updates should also include an evaluation of the relative effectiveness of the TDM strategies as the development progresses, making sure that the trip reduction rates are valid.

25. Construction plans for all work within or affecting public streets should be submitted for review and approval. Traffic control plans during construction should also be submitted for review and approval, as required. Vehicular access points shall be constructed as standard City dropped driveways. Adequate vehicular sight distance shall be provided and maintained at all driveways for pedestrians and other vehicles. Driveway grades shall not exceed 5 percent for a minimum distance of 25 feet from the back of the designated pedestrian walkway. Any entry gates or guard shacks, if used, should be recessed as far into the driveway as necessary to avoid any queuing onto public streets. All loading and parking areas shall be designed such that vehicles enter and exit, front first.

26. The TIAR should include an assessment of Pua Lane. Improvements within the existing right-of-way, such as widening sidewalks (this can be done within the property with pedestrian easements), bike facilities, removing parking, providing turn lanes into the project site, restriping intersections (additional laneage) to provide additional capacity, should all be evaluated/considered.

27. In the TIAR, please clarify the 35 percent reduction of residential trips used in Tables 4 & 5. The narrative on page 29 states a 25 and 30 percent reduction.

28. The number of on-site parking stalls should be justified and validated in the TIAR and TMP.

29. The TIAR should include an extended assessment of the King Street/Liliha Street/Dillingham Boulevard intersection operations; mainly, what are the operations beyond the peak AM and PM hours. All intersection improvements to ease level-of-service should be considered. These include, but are not limited to, elevated pedestrian crossings, all-way pedestrian crossing, limiting turn movements, etc.

30. A separate pedestrian assessment report should be provided to the DPP together with the updated TIAR to determine the sidewalk widths needed to accommodate the increased pedestrian activity around the project site. This should be completed early on prior to final design phase, so wider sidewalks, if needed, can be incorporated into the design.

Wastewater

31. On pages 4-46 under Section 4.9.2, Wastewater System, the first paragraph in "Potential Impacts and Mitigation Measures," states there is a table for projected wastewater contributions from Phase 1. However, there is no table included.

Storm Drainage

32. The existing drainage system in Iwilei is already substandard and experiences frequent flooding. The DPP commends the DEIS for considering various reuse and on-site retention methods (i.e., green roofs, rain gardens, bioswales, etc.) for the proposed development. We request that the project's mitigation measures not only prevent an increase in runoff generated by the new development but also help decrease pre-development runoff quantities.

33. The project's compliance with the City's Storm Drainage Standards and Rules Relating to Water Quality will be verified at the time that the construction/grading plans are submitted to the DPP for review.

Should you have any questions, please contact Andrew Tang of our staff, at 768-8123.

Very truly yours,

Kathy K. Sokugawa
Acting Director
