Environmental Assessment Determinations and Compliance Findings for HUD-assisted Projects 24 CFR Part 58

Project Information

Project Name: Mayor-Wright-Homes-Redevelopment

HEROS Number: 900000010096124

Responsible Entity (RE): HAWAII, STATE OF HAWAII HONOLULU HI, 96813

RE Preparer: PBR HAWAII & Associates

State / Local Identifier: HI001

Certifying Officer: The Honorable David Y. Ige

Grant Recipient (if different than Responsible Entity): Hawaii Public Housing Authority

PHA Code: HI001

Point of Contact: Hakim Ouansafi, Executive Director

Consultant (if applicable): PBR HAWAII & Associates, Inc.

Point of Contact: Kimi Yuen, Principal

Project Location: 606 N Kukui St, Honolulu, HI 96817

Additional Location Information:
The Mayor Wright Homes (MWH) Redevelopment project is located on the site of the existing MWH (Figure 1) on the island of Oahu in the State of Hawaii. It is most closely associated with two ahupuaa, Kalihi and Kapalama. The site consists of one parcel

identified as TMK: (1)1-7-029:003 (Figure 2). The 14.8-acre site is owned by the Hawaii Public Housing Authority of the State of Hawaii. North Kukui Street runs through the parcel from east to west but is not a separate parcel. The property is bounded by four existing roadways: North King Street, Pua Lane, North Vineyard Boulevard, and Liliha Street. Within the vicinity of the property is a mix of residential and commercial uses, churches, community services, and schools including Princess Victoria Kaiulani Elementary School and Honolulu Community College across North King Street. The commercial properties border the site along much of North King Street and at the corner of North Vineyard Boulevard and Liliha Street.

mwh@pbrhawaii.com

Description of the Proposed Project [24 CFR 50.12 & 58.32; 40 CFR 1508.25]:

The Hawaii Public Housing Authority and its development partner, MWH Partners, LLC, propose to redevelop the site with 2,448 residential rental units and up to 80,000 square feet of commercial space. This includes a one-for-one replacement of the existing 364 public housing units based on the number of bedrooms in each unit, as well as up to an additional 2,084 affordable and market rental housing units that can be offered to potential residents in a range of income levels. Two-thirds of the total units are to be designated as long-term affordable housing targeted to those earning up to 120 percent of the Area Median Income (AMI). The commercial space will include a mix of retail, office space, and community services to support the new residential uses and complement the surrounding neighborhood. A series of open spaces are envisioned throughout the redesigned site including a new community center and park at the heart of the project. All existing buildings will be removed and will require approval of a Demolition and Disposition of Public Housing application in accordance with 24 CFR part 970, as amended, from the HUD Special Applications Center.

Construction is estimated to be completed in five phases. Each phase is estimated to take roughly two years for a total construction period of at least ten years. All phases will be developed in compliance with applicable regulations associated with HUD's federal funding assistance to the Mayor Wright Homes Redevelopment project, including, but not limited to: The U.S. Housing Act of 1937, Section 8 Project-Based Vouchers; The U.S. Housing Act of 1937, Section 9 ACC payments (Operating Fund) and Public Housing Capital Fund (including Capital Fund Financing Program); Sec. 18 of the U.S. Housing Act of 1937, as amended, including limited relocation assistance Demolition/Disposition assistance; Rental Assistance Demonstration ("RAD") Section 8 Project Based Vouchers (authorized in the Consolidated and Further Continuing Appropriations Act of 2012); Low-Income Housing Tax Credits of the U.S. Tax Reform Act of 1986; Multifamily FHA, Section 221(D)(3), 221(D)(4); and Community Planning and Development Programs such as Community Development Block Grants and HOME. Figure 3 shows the conceptual master plan for the project. Under 24 CFR 58.37(b), "An EIS [environmental impact statement] is required under any of the following circumstances, except as provided in paragraph (c) of this section: "(3) The project would provide enough additional water and sewer capacity to support 2,500 or more additional housing units. The project does not have to be specifically intended for residential use nor does it have to be totally new construction. If the project is designed to provide upgraded service to existing development as well as to serve new development, only that portion of the increased capacity which is intended to serve new development should be counted." Because the new water and sewer systems proposed for the project would have the capacity to serve an additional 2,500 or more housing units, the project meets this EIS threshold. However, under 24 CFR 58.37(c), "If, on the basis of an EA, a responsible entity determines that the thresholds in paragraph (b) of this section are the sole reason for the EIS, the responsible entity may prepare a [Finding of No Significant Impact] FONSI pursuant to 40 CFR 1501.4. In such cases, the FONSI must be made available for public review for at least 30 days before the responsible entity makes the final determination whether to prepare an EIS." The sole reason the proposed project meets the threshold for an EIS is the capacity of the new and upgraded water and sewer systems under 24 CFR 58.37(b) and therefore, this EA has been prepared in support of a FONSI, which will be made available for public review for at least 30 days before the Responsible Entity (RE) makes the final determination whether or not to prepare an EIS.

Statement of Purpose and Need for the Proposal [40 CFR 1508.9(b)]:
Please see Attachment 1.

Existing Conditions and Trends [24 CFR 58.40(a)]:
Please see Attachment 2.

Estimated Total HUD Funded, Assisted or Insured Amount: $7,400,000.00

This project anticipates the use of funds or assistance from another federal agency in addition to HUD in the form of:

Estimated Total Project Cost [24 CFR 58.2 (a) (5)]: $1,300,000,000.00

Compliance with 24 CFR §50.4, §58.5 and §58.6 Laws and Authorities

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §50.4, §58.5, and §58.6	Are formal compliance steps or mitigation required?	Compliance determination (See Appendix A for source determinations)
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR §50.4 & § 58.6		
Airport Hazards Clear Zones and Accident Potential Zones; 24 CFR Part 51 Subpart D	☐ Yes ☑ No	No impact. The site location is not within 2,500 feet of a civil air operation. The closest airport is the Daniel K. Inouye International Airport (HNL) approximately 2.7 miles away and separated from HNL airport by Honolulu Harbor and Keehi Lagoon. HNL is part of the State of Hawaii Airport System and is owned and operated by the State of Hawaii Department of Transportation (DOT). Future development activities related to this project that require further review and permits will follow the relevant guidance in the DOT-Airports Technical Assistance Memorandum for Daniel K. Inouye International Airport. The runways at HNL are also utilized for military operations. Properties located within 2,500 feet of a civil airport or 15,000 feet from the end of a runway at a military airfield should be identified. Those within 8,000 feet of a military airfield require a written finding made by the airport or airfield operator stating whether or not the property proposed for assistance is located within a runway Clear Zone (CZ) (civil airport) or Clear Zone or Accident

		Potential Zone (military airfield). The project site is not within 2,500 feet of a civil airport. The end of the nearest runway, 26L, is located +/-14,300 feet from the project site and is therefore identified as being in excess of 8,000 feet, but within 15,000 feet of the end of a military airfield. A written finding is therefore not required. However, because the nearest runway (26L) at Daniel K. Inouye International Airport is approximately 14,300 feet from the project site, which is within 20,000 feet, an FAA FORM 7460-1 will be required for future construction equipment and staging area heights, including temporary construction crane heights in the submittal.Figure 5 shows the distance of the project to HNL. Figure 22 shows the airport airspace in relation to the site. The site is not within the Accident Potential Zone.
Coastal Barrier Resources Act Coastal Barrier Resources Act, as amended by the Coastal Barrier Improvement Act of 1990 [16 USC 3501]	☐ Yes ☑ No	No impact. The project is not located within a designated coastal barrier resource area. There are no coastal barrier resources within the State of Hawaii, as shown on the U.S. Fish and Wildlife Services Coastal Barrier Resources System Mapper (see Exhibit 1). Therefore, the proposed improvements will have no impact on these resources nor will mitigation measures be necessary.
Flood Insurance Flood Disaster Protection Act of 1973 and National Flood Insurance Reform Act of 1994 [42 USC 4001-4128 and 42 USC 5154a]	☐ Yes ☑ No	No impact. The project site is located in Zone X, which is defined as an area outside of the 500-year floodplain. This is documented by FEMA Flood Insurance Rate Map Panel 354, Map Number 15003C0354G, dated January 19, 2011 (see Exhibit 2). Zone X is determined by the National Flood Insurance Program as an area of minimal flood hazard. A FEMA revalidation letter, dated November 4, 2014, includes revisions to the FIRM panel 15003C0354G. However, none of

		the revisions are located at or near the project site. The FEM Flood Map Service Center website (https://msc.fema.gove/portal/home) was also checked again on April 8, 2020 for the latest FIRM panel and found the same FIRM panel.
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR §50.4 & § 58.5		
Air Quality Clean Air Act, as amended, particularly section 176(c) & (d); 40 CFR Parts 6, 51, 93	☐ Yes ☑ No	No impact. The ambient air quality of the Site meets all Federal and State standards. According to the Environmental Protection Agency, the entire state of Hawaii is a designated attainment area. The information was accessed online at the following website: https://www.epa.gov/green-book in December 2019 and is included in Exhibit 3. The proposed project is located between the monitoring stations identified as "Honolulu" to the east and "Sand Island" to the south-west. The locations of these stations are identified in Section 3 of the December 2016 State of Hawaii Annual Summary 2016 Air Quality Data (2016AQD) report. Section 4 of 2016AQD report identifies stations that exceeded National Ambient Air Quality Standards during 2016. There were no exceedances of National Ambient Air Quality Standards at either the Honolulu or Sand Island Stations during 2016. No exceedances of any of the National Ambient Air Quality Standards have been recorded at any Oahu monitoring stations in the last 5 years. A list of all exceedances recorded in the State of Hawaii between January 2014 and December 2019 are available at the following website: http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/ and are included in Exhibit 3. Section 6 of the HI2016AQD report compares all of the State's monitoring stations including Sand

		Island and Honolulu to State and Federal Standards. The 5-year trend for both stations indicates that values for criteria pollutant from air samples collected from each station are below State and Federal ambient air quality levels. Section 6 of the 2016 report is included in Exhibit 3.
Coastal Zone Management Act Coastal Zone Management Act, sections 307(c) & (d)	☐ Yes ☑ No	No impact. All lands in the State of Hawaii are within the Coastal Zone Management Area. In a letter dated June 24, 2004 the Department of Business, Economic Development and Tourism's Office of Planning indicated that the Hawaii Coastal Zone Management program does not review any HUD assistance programs, grants, or loans for federal consistency, but that Coastal Zone Management regulations relating to actions within the Special Management Areas and Shoreline Setback still apply. This information was re-confirmed by John Nakagawa of the Hawaii State Office of Planning, Coastal Zone Management Program via phone on February 5, 2019 (see Exhibit 4). The proposed project is not within the Special Management Area; therefore, no further consultation is required (see Figure 29).
Contamination and Toxic Substances 24 CFR 50.3(i) & 58.5(i)(2)]	☑ Yes ☐ No	Please see Attachment 3 (in Appendix A).
Endangered Species Act Endangered Species Act of 1973, particularly section 7; 50 CFR Part 402	☑ Yes ☐ No	A biological survey was conducted in May of 2016 that closely examined all existing vegetation present at the site as well as any other vegetation that may likely occur based on the location of the property. A fauna survey of the site was also conducted concurrently. These studies are included in Exhibit 7. No federally designated critical habitats are within the immediate vicinity of the proposed project. However, the U.S. Fish & Wildlife Service data indicates

		that the following federally-listed species may occur or transit through the vicinity of the proposed project area: endangered Hawaiian hoary bat (Lasiurus cinereus semotus); endangered Hawaiian petrel (Pterodroma sandwichensis), threatened Newell's shearwater (Puffinus auricularis newelli), and endangered Hawaii Distinct Population Segment (DPS) of the band-rumped storm-petrel (Oceanodroma castro). As such, mitigation measures are included to minimize any potential impacts to endangered or threatened species traversing the project site.
Explosive and Flammable Hazards Above-Ground Tanks)[24 CFR Part 51 Subpart C	☐ Yes ☑ No	No Impact. The Phase I Environmental Site Assessment (ESA) (Exhibit 5) included site reconnaissance to evaluate the current use of the project site, as well as adjacent and near-by properties. An Environmental Data Radius Map Report was contracted as part of the Phase I ESA and no above ground storage tanks were noted within a one-mile radius of the project site (see Exhibit 5). The project site is not anticipated to be affected by hazardous operations that could result in flammable or explosive conditions.
Farmlands Protection Farmland Protection Policy Act of 1981, particularly sections 1504(b) and 1541; 7 CFR Part 658	☐ Yes ☑ No	No impact. The project site is not classified by the Land Study Bureau (LSB) productivity ratings (Figure 8) or as Agricultural Lands of Importance to the State of Hawaii (ALISH) (Figure 10) since the area has been urbanized since the early 1900s, prior to the LSB and ALISH mapping in the 1970s.
Floodplain Management Executive Order 11988, particularly section 2(a); 24 CFR Part 55	☐ Yes ☑ No	No impact. The Flood Insurance Rate Map (FIRM) panel number 15003C0354G indicates that the proposed project site is located within Zone X, an area outside of the 500-year floodplain (see Exhibit 2). Flooding may still be possible in extreme events but

		poses a minimal flood hazard. Formal compliance and mitigation are not required.
Historic Preservation National Historic Preservation Act of 1966, particularly sections 106 and 110; 36 CFR Part 800	☑ Yes ☐ No	Please see Attachment 4 (in Appendix A)
Noise Abatement and Control Noise Control Act of 1972, as amended by the Quiet Communities Act of 1978; 24 CFR Part 51 Subpart B	☑ Yes ☐ No	Please see Attachment 5 (in Appendix A).
Sole Source Aquifers Safe Drinking Water Act of 1974, as amended, particularly section 1424(e); 40 CFR Part 149	☐ Yes ☑ No	No impact. The project site is located within the boundaries of the Southern Oahu Basal Aquifer as identified on Figure 7. In a Memorandum of Understanding (MOU) between the EPA and HUD dated May 17, 1990, section II.B identified HUD activities that would not affect water quality. Such activities need not be referred to the EPA for evaluation. Actions associated with the project are exempt from further evaluation based on II.B.1-for Projects served by existing publicly owned/operated sewerage systems and treatment plants that are not subject to locally or EPA imposed moratoriums or otherwise covered by the MOU. A memorandum detailing the implementation of the MOU dated May 1991 is included as Exhibit 16.
Wetlands Protection Executive Order 11990, particularly sections 2 and 5	☐ Yes ☑ No	No impact. According to the National Wetlands Inventory, there are no wetlands on or near the Site (U.S. Fish and Wildlife Service, accessed December 2019) (see Exhibit 17) and no mitigation measures are proposed.
Wild and Scenic Rivers Act Wild and Scenic Rivers Act of 1968, particularly section 7(b) and (c)	☐ Yes ☑ No	No impact. Currently there are no designated wild and scenic rivers in the State of Hawaii (U.S. Fish and Wildlife Service, accessed December 2019) (see Exhibit 18) and no mitigation measures are proposed.
HUD HOUSING ENVIRONMENTAL STANDARDS		

ENVIRONMENTAL JUSTICE		
Environmental Justice Executive Order 12898	☐ Yes ☑ No	No impact. The MWH Redevelopment project is located in a predominantly minority and low-income neighborhood. However, the site and the surrounding neighborhood do not suffer from disproportionately adverse environmental effects on minority and low-income populations relative to the community at large. The updated 2018 EJSCREEN Report for the MWH census tract and one-mile ring surrounding it is included as Exhibit 19 and notes that MWH rates relatively high in State, EPA region, and national percentiles on nine of the eleven environmental indexes, which further supports the redevelopment of the site into a more sustainable project. The report also notes that there are currently no Superfund sites located within the EJSCREEN search area. However, there are four hazardous waste treatment, storage, or disposal facilities within the EJSCREEN search area. As such, the notion of environmental justice has been evaluated and there will be no activity performed with HUD or other Federal funds that will in any way create discrimination or isolation of minority or low-income individuals based on the siting or purpose of the MWH Redevelopment. The proposed development is not anticipated to create, expose, or disproportionately affect minority or low-income persons in comparison to the rest of the population. Therefore, it is in compliance with E.O. 12898 and no mitigation measures are proposed.

Environmental Assessment Factors [24 CFR 58.40; Ref. 40 CFR 1508.8 &1508.27]

Impact Codes: An impact code from the following list has been used to make the determination of impact for each factor.
(1) Minor beneficial impact
(2) No impact anticipated
(3) Minor Adverse Impact – May require mitigation
(4) Significant or potentially significant impact requiring avoidance or modification which may require an Environmental Impact Statement.

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
LAND DEVELOPMENT			
Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design	3	Please see Attachment 6 - EA Factors Analysis	The proposed MWH Redevelopment is not consistent with the current A-2 zoning's FAR and building height requirements. However, the project is consistent with the City and County of Honolulu's (City) adopted Downtown Neighborhood TOD Plan (TOD Plan), which permits a maximum building height of 400 feet and FAR up to 7.5 on the current site. A 201H Housing Program exemption for the existing zoning will be sought from the City to allow the project to be developed under the City's adopted TOD Plan recommendations for FAR and building height limits. The project team anticipates submitting the 201H application to the City Spring 2020. Visual impacts from the project must take into consideration the highly urban nature of this viewshed with buildings in Downtown Honolulu extending up to about 430 feet in height. While views to specific landmarks from various viewpoints within the Primary Urban Center may be altered by the proposed project, the overall urban character of this viewshed will not be significantly altered. The plan attempts to mitigate visual impacts by: - Providing fewer towers with low- and mid-rise buildings comprising most of the street-facing building massing and space between the towers to preserve distant views where

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
LAND DEVELOPMENT			
			possible; - Activating the street level views with landscaping and pedestrian-friendly streetscapes, commercial uses and lower- and mid-rise residential buildings wherever possible; - Creating a more interesting skyline by varying building heights; - Setting the towers 50 feet back from Pua Lane and Liliha Streets to minimize their visual impacts from the street level of adjacent neighborhoods; and - Orienting the towers with their narrower sides facing the mauka and makai sides of the site and their wider side facing east and west to preserve mauka to makai views.
Soil Suitability / Slope/ Erosion / Drainage and Storm Water Runoff	2	Please see Attachment 6 - EA Factors Analysis	
Hazards and Nuisances including Site Safety and Site-Generated Noise	3	Please see Attachment 6 - EA Factors Analysis	Please see Attachment 10 - Mitigation Measures and Conditions
Energy Consumption/Energy Efficiency	2	Please see Attachment 6 - EA Factors Analysis	
SOCIOECONOMIC			
Employment and Income Patterns	1	Please see Attachment 6 - EA Factors Analysis	
Demographic Character Changes / Displacement	1	Please see Attachment 6 - EA Factors Analysis	
COMMUNITY FACILITIES AND SERVICES			
Educational and Cultural Facilities (Access and Capacity)	3	Please see Attachment 6 - EA Factors Analysis	On-going discussions with the State Department of Education are being held to determine how the proposed project will support public education. As the project moves into design and

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
LAND DEVELOPMENT			
			construction, MWH Partners will continue discussions with the Hawaii Department of Education regarding impacts on student relocation and transition during the carious phases of this project. MWH Partners will coordinate with the Hawaii Department of Education to execute an educational contribution agreement to satisfy the State's school impact fee requirements.
Commercial Facilities (Access and Proximity)	1	Please see Attachment 6 - EA Factors Analysis	
Health Care / Social Services (Access and Capacity)	1	Please see Attachment 6 - EA Factors Analysis	
Solid Waste Disposal and Recycling (Feasibility and Capacity)	3	Please see Attachment 6 - EA Factors Analysis	The proposed project will support recycling as much as possible for both households and commercial uses as well as green wastes generated onsite. Detailed design will include but not be limited to onsite facilities to support separating wastes into recyclable and non-recyclable materials and for central collection facilities within the buildings. MWH Partners, LLC will also work with the City and contracted collection services to ensure as much recyclable materials are diverted from the waste stream from the project as they will be managing ongoing operations of the site once construction is complete. All remaining non-hazardous waste generated by the project must be disposed of at a solid waste management facility that complies with applicable State regulations of HAR, Chapter 11-58.1. No open burning of wastes either onsite or offsite will be permitted.

Environmental Assessment Factor	Impact Code	Impact Evaluation	Mitigation
LAND DEVELOPMENT			
Waste Water and Sanitary Sewers (Feasibility and Capacity)	2	Please see Attachment 6 - EA Factors Analysis	
Water Supply (Feasibility and Capacity)	2	Please see Attachment 6 - EA Factors Analysis	
Public Safety - Police, Fire and Emergency Medical	3	Please see Attachment 6 - EA Factors Analysis	Project designers will continue to work closely with City Police, the Honolulu Fire Department, and other public service providers during the detailed design of the facilities to ensure the new structures at MWH will be easily accessible by emergency services to support favorable response times.
Parks, Open Space and Recreation (Access and Capacity)	2	Please see Attachment 6 - EA Factors Analysis	
Transportation and Accessibility (Access and Capacity)	3	Please see Attachment 6 - EA Factors Analysis	Please see Attachment 10 - Mitigation Measures and Conditions

Additional Studies Performed:
Technical studies prepared for the proposed project and referenced in this document are attached as Exhibits throughout this NEPA EA. An environmental impact statement (EIS) was also prepared under the State of Hawaii Environmental Impact Statement Law (Hawaii Revised Statutes, Chapter 343) and the State of Hawaii Environmental Impact Statement Rules (Hawaii Administrative Rules, Title 11, Chapter 200). The Final EIS has been submitted to the Governor of the State of Hawaii for his review and consideration as the "accepting authority." The Final EIS will be made available to the public on March 8, 2018 at the State of Hawaii Office of Environmental Quality Control's (OEQC) website at the following link: http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-03-08-OA-FEIS-Mayor-Wright-Homes.pdf. His decision will also be published by the OEQC once made.

List of Sources, Agencies and Persons Consulted [40 CFR 1508.9(b)]:
Various individuals, agencies, organizations were consulted or contacted in preparation of this environmental record. The NEPA distribution list attached in Exhibit 26 includes all those who received an invitation to a NEPA scoping meeting held on November 29, 2017. This included a mix of Federal, State, and City and County of Honolulu agencies as well as legislators and elected officials, area schools, Native Hawaiian organizations, community leaders and stakeholders, and area businesses, residents, and landowners within a roughly one- to one and a half block radius of the project site as shown in Figure 30. Pre-consultation to satisfy compliance with the National Historic Preservation Act (NHPA) Section 106 and State Historic Preservation Division requirements (HRS 6E-8) for the proposed project was initiated early in the process of evaluating alternatives. The development and planning team had the opportunity to meet with State Historic Preservation Department staff along with staff from Historic Hawaii Foundation on January 25, 2017 to discuss the nature of the existing structures and the considered alternatives for rehabilitation or replacement. From the end of May to early June, 2016, the archaeologists for the project, TCP Hawaii, sent formal consultation letters regarding the (then) proposed Archaeological Inventory Survey and Cultural Impact Assessment to the following agencies and individuals: * State Historic Preservation Department/Department of Land and Natural Resources (Administrator Downer, Archaeology Branch Chief Susan Lebo, Oahu Burial Site Program staff Regina Hilo, and Kaahiki Solis); * State of Hawaii Office of Hawaiian Affairs (OHA) (Ka Pouhana/CEO Crabbe and staff in Compliance, Kai Markell and Lauren Morawski); * Kalihi-Palama Neighborhood Board (Chair Ryan Mandado); * Kalihi-Palama Hawaiian Civic Club (Pelekikena/President Leimomi Khan); * Cynthia Yoshida (Public Housing Supervisor, MWH); * Historic Hawaii Foundation (Kiersten Faulkner); * Kaanohi Paulette Kaleikini (Native Hawaiian, cultural descendant, Honolulu area); * Michael Lee (Native Hawaiian, cultural descendant, Honolulu area). The Section 106 consultation also included mailing letters of invitation for consultation to all those listed on the U.S. Department of the Interior's Native Hawaiian Organization Notification List and six other local community organizations. The letter and related materials including the distribution list are attached as Exhibit 12. Three parties responded to the invitation and, of these, only the Historic Hawaii Foundation, a Hawaii nonprofit corporation, expressed a desire to participate in consultation as a consulting party. In addition, much of the information used to prepare this document was compiled from the Final EIS completed for the Chapter 343, HRS process (State EIS). The distribution list for the State EIS was used as the basis for the November 2018 NEPA scoping meeting distribution with an expanded

list of Federal agencies and the addition of area businesses, residents, and landowners within a roughly one- to one and a half block radius of the project site as shown in Figure 30. The distribution list has since been updated for this NEPA EA and is included as Exhibit 27. A description of the State EIS consultation process is included in Exhibit 28 (taken from Section 8 of the State Final EIS). Comments received on or during the State EIS Preparation Notice, State EIS scoping meeting, and State Draft EIS public comment periods are included in Appendices N, O, and P of the State Final EIS, which can be accessed at the following website: http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-03-08-OA-FEIS-Mayor-Wright-Homes.pdf

List of Permits Obtained:
No permits that involve the use of federal funds for the proposed project have been obtained to date.

Public Outreach [24 CFR 58.43]:
Public outreach was initiated early during the project scoping and master plan process in April 2016. Hawaii Public Housing Authority and the planning and development team consulted with current residents, the general public, and community stakeholders about the potential scope and impacts of the proposed project. A series of community and resident meetings were held to help develop the master plan for the project culminating in a weeklong design charrette in August 2016 that was held on-site at Mayor Wright Homes and open to the public. Meetings were conducted with the following community groups and individuals beginning in early 2016: * Neighborhood Boards (4 meetings that took place between April and October 2016 and 2 more on November 15, 2017 and September 17, 2018) * State Legislators (meetings with 4 legislators throughout April 2016) * Councilmembers (meetings with 2 councilmembers that took place in April and August 2016, additional meetings with 8 councilmembers in April and June 2017, and additional meetings with 3 council members in March and April 2019) * Mayor Wright Homes Resident Meetings (2 meetings took place May and July 2016) * Public Community Meetings (4 meetings that took place in May, June, and July 2016 as well as June 2017) * Stakeholder Meetings and Interviews (11 meetings with different community representatives and organizations that took place from July through August 2016) * Community Advisory Committee (3 meetings that took place in July and August 2016 as well as 2 follow up meetings in June 2017 and September 2018) * Two additional public scoping meetings related to the state and federal environmental

review processes (August 1, 2017 and November 29, 2017, respectively) In addition, a State EIS has been completed for the proposed project, which also involves public outreach and invites public comment. The EIS Preparation Notice (EISPN) for the proposed project was prepared and published in the State Office of Environmental Quality Control (OEQC)'s The Environmental Notice on September 23, 2016, as required by State laws for environmental review, pre-consultation, and scoping (Chapter 343, Hawaii Revised Statute). Subsequently, the State Draft EIS was prepared and published in the September 8, 2017 edition of OEQC's The Environmental Notice and the public comment period for the DEIS closed on October 23, 2017. A summary of the public outreach process for the State EIS is attached as Exhibit 28. A full copy of the State Chapter 343, HRS Final EIS can be accessed at the following website: http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-03-08-OA-FEIS-Mayor-Wright-Homes.pdf

Exhibit 28 - Chapter 343 HRS Consultation(1).pdf

Cumulative Impact Analysis [24 CFR 58.32]:
Based on the studies performed and research evaluated, it is anticipated that the proposed project will have an overall net cumulative beneficial impact, particularly with regard to socio-economic impacts, public health, and efficient land development, which is consistent with the City and County of Honolulu's vision for this new TOD neighborhood. The proposed project helps address the critical affordable housing shortage with the provision of much needed affordable rental housing close to Downtown Honolulu and other employment centers and will be easily accessible from the future rail transit. Please see Attachment 8 for the full discussion.

Alternatives [24 CFR 58.40(e); 40 CFR 1508.9]
2,000-Unit and 3,000-Unit Scenarios: While fewer towers and lower perimeter buildings would be needed, the 2,000-unit scenario was rejected as area legislators recommended that the project provide as many residential units as possible. The 3,000-unit scenario was rejected over concerns for the massing and scale of the buildings and its visual impacts. In order to accommodate the 3,000 units and the required parking relative to that density, the towers would all need to be built to the maximum height limit of 400' with all of the podium buildings fronting the streets being taller. In addition, one of the internal street connections is lost, reducing connectivity and costly underground parking would be needed. The additional excavation will also increase the potential of disturbing subsurface archaeological and historic remains, impacting neighboring properties, and complicating construction including increased noise, vibration, and dust impacts. Downtown Neighborhood Transit Oriented Development (TOD) Plan Density: The original density proposed in the 2015 draft Downtown Neighborhood TOD Plan was also analyzed. It allowed up to 1.9 FAR, which equates to an estimated 991,800 SF of permitted building area. This would translate into

approximately 1,000 residential units if up to 80,000 SF of commercial space was maintained as part of the mix. The scenario is not preferred as it only increases the amount of rental housing units by 636 units as opposed to the 2,084 additional units in the preferred plan. Alternative Street Alignments and Site Plan Layouts: Throughout the master plan process, the design team tested various site plan layouts. However, these alignments were not favored by residents as some included straight connections which might encourage drivers to speed and cut through the site, or additional intersections off of higher-speed streets. The preferred site plan balances increased and improved accessibility and connectivity through the site, without compromising safety. Alternative Phasing Plans: Other phasing plans were considered including redeveloping the entire site at once or in fewer increments. These may shorten the overall time period and simplify demolition and construction operations. However, they may increase traffic, noise, vibration, and air quality impacts related to demolition and construction during that time and would require more households to be relocated offsite in the initial phase and more disruption to more people. Given the shortage of affordable housing and rental units, this may require relocation to more distant locations or to undesirable locations. The proposed phasing attempts to minimize the number of households who need to be relocated offsite to ease the transition for current residents into their new units. Net-Zero Energy Alternative: In order for the project to be net-zero energy, it would have to generate 9.7 MW of electricity as part of the project. Based on the renewable energy resources available at the site, the most feasible renewable energy source would be solar photovoltaic (PV) electricity. For 9.7 MW PV, approximately 39 acres of land would be needed. The existing parcel is only 14.8 acres and too small. Another option would be to develop it offsite. Rough cost estimates are $25,000,000 not including the lease or cost of the land. If battery storage is required, a 5 MW battery storage system would cost roughly $62,000,000 for a Lithium-Ion system or $10,000,000 for a lead-acid system. Also, if pursued by a third party provider, the 10 MW facility would require a lengthy and costly PUC process that could not guarantee success. Site constraints, upfront costs, and complexity and timing of additional permitting and approvals to achieve implementation make this alternative infeasible at this time.

No Action Alternative [24 CFR 58.40(e)]

The No Action alternative does not accomplish the stated project purpose and the State's goal of increasing the development of at least 22,500 affordable rental housing units available for occupancy by December 2026 as it leaves the existing site in its current condition. The existing 364 public housing units would remain, and no additional affordable rental housing units would be provided. It also leaves current residents in functionally obsolete units that require substantial maintenance and repair and have outlasted their useful life. Although the project was recently upgraded in 1984, the units will not be of high-quality sustainable design as the existing site was built in the early 1950s and does not meet current standards for ADA accessibility, contains lead-based paints and asbestos, and would require significant capital improvements to retrofit and

upgrade. The current layout isolates it from the surrounding community by having the residential units face inward and is completely surrounded by fencing, making it inaccessible except at the two vehicle access points on North Kukui Street and the five pedestrian gates which are locked at 10 PM nightly. The site will not be consistent with the Downtown Neighborhood TOD Plan for a higher intensity mixed-use community. It would continue to leverage federal sources of support as it currently does. However, it would not leverage private funding to maximize the efficiency and effectiveness of public resources.

Summary of Findings and Conclusions:
The proposed MWH Redevelopment project, with 2,448 residential rental units, including the a one-for-one replacement of the 364 public housing units, and up to 80,000 square feet of commercial uses, a mix of parks and open spaces, parking, a community center, and a multi-purpose hale, is the preferred alternative for the site for the following reasons: * The proposed project is ideally located in the Honolulu's Primary Urban Center (PUC), close to existing employment centers, infrastructure, and transportation networks, which is highly consistent with the City and County of Honolulu's General Plan and PUC Development Plan. * The Honolulu City Council recently adopted the Downtown Neighborhood TOD Plan on September 6, 2017 as City Council Resolution No. 16-247, CD1, FD1 permitting building heights up to 400 feet and a FAR up to 7.5 for the proposed project site. * The overall intensification of land uses within the Kalihi-Kapalama-Iwilei corridor is a major goal of the City of Honolulu's long-range vision and general development pattern goals which emphasize the need for the existing urban core around Honolulu to remain the Oahu's primary urban center. * The proposed project will reduce the pressure to develop in more rural areas on Oahu that may be more adversely impacted by a project of similar scale and which may not have sufficient infrastructure, utilities, or access to transportation networks. * The proposed project is well serviced by Oahu's existing bus transit system. It is also located less than a third-of-a-mile from the planned Iwilei Transit Station of the Honolulu Light Rail Transit Project and has been designed with thoughtful consideration to equitable Transit Oriented Development (TOD) design principles and may contribute to reductions in impacts such as traffic and related fuel consumption and air pollution. * The conceptual master plan for the proposed project has been designed in accordance with City and County of Honolulu Complete Streets Ordinance (Section 14-33, ROH) and envisions incorporating retail, commercial, and social service uses at street level of the new buildings, complimenting existing area uses, and providing necessary services for area residents. * The proposed project is expected to result in a reinvigorated community with well-connected thoroughfares together with interconnected and activated streets that will encourage walking and biking, which in turn support community safety and public health. * The proposed project incorporates well-designed recreational spaces combined with green building and sustainability concepts that will contribute to improved individual health, wellbeing, quality of life and sense of connectedness for

existing and future residents. * The proposed project represents the efficient use of public resources by leveraging both private and public funding to redevelop an existing urbanized site. * The proposed project attempts to balance the potential impacts of intensification of use onsite with the social and environmental considerations of creating a high-quality, comfortable, and inviting community to live, work, and play with the potential for far-reaching transformative positive community impacts well beyond the boundaries of the project site. The Mayor Wright Homes redevelopment will not only improve the housing conditions for its current residents, but will fundamentally transform an existing, obsolete, state-owned land asset, into a new, mixed-income, mixed-use, transit oriented development complementing the existing vibrant Kalihi, Liliha, Kapalama, and Iwilei communities and facilitating the delivery of urgently needed new rental housing units to help address the existing affordable rental housing crises across the State of Hawaii.

Mitigation Measures and Conditions [CFR 1505.2(c)]:

Summarized below are all mitigation measures adopted by the Responsible Entity to reduce, avoid or eliminate adverse environmental impacts and to avoid non-compliance or non-conformance with the above-listed authorities and factors. These measures/conditions must be incorporated into project contracts, development agreements and other relevant documents. The staff responsible for implementing and monitoring mitigation measures should be clearly identified in the mitigation plan.

Law, Authority, or Factor	Mitigation Measure or Condition	Comments on Completed Measures	Complete
Historic Preservation	Please see Attachment 10 - Mitigation Measures and Conditions	N/A	
Contamination and Toxic Substances	Please see Attachment 10 - Mitigation Measures & Conditions	N/A	
Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design	The proposed MWH Redevelopment is not consistent with the current A-2 zoning's FAR and building height requirements. However, the project is consistent with the City and County of Honolulu's (City) adopted Downtown Neighborhood TOD Plan (TOD Plan), which permits a maximum building height of 400 feet and FAR up to 7.5 on the current site. A 201H Housing Program exemption for the existing zoning will be sought from the City to allow the project to be developed under the City's adopted TOD Plan recommendations for FAR and	N/A	

	building height limits. The project team anticipates submitting the 201H application to the City Spring 2020. Visual impacts from the project must take into consideration the highly urban nature of this viewshed with buildings in Downtown Honolulu extending up to about 430 feet in height. While views to specific landmarks from various viewpoints within the Primary Urban Center may be altered by the proposed project, the overall urban character of this viewshed will not be significantly altered. The plan attempts to mitigate visual impacts by: - Providing fewer towers with low- and mid-rise buildings comprising most of the street-facing building massing and space between the towers to preserve distant views where possible; - Activating the street level views with landscaping and pedestrian-friendly streetscapes, commercial uses and lower- and mid-rise residential buildings wherever possible; - Creating a more interesting skyline by varying building heights; - Setting the towers 50 feet back from Pua Lane and Liliha Streets to minimize their visual impacts from the street level of adjacent neighborhoods; and - Orienting the towers with their narrower sides facing the mauka and makai sides of the site and their wider side facing east and west to preserve mauka to makai views.		
Hazards and Nuisances including Site Safety and Site-Generated Noise	Please see Attachment 10 - Mitigation Measures and Conditions	N/A	
Educational and Cultural Facilities (Access and Capacity)	On-going discussions with the State Department of Education are being held to determine how the proposed project will support public education. As the project moves into design and	N/A	

	construction, MWH Partners will continue discussions with the Hawaii Department of Education regarding impacts on student relocation and transition during the carious phases of this project. MWH Partners will coordinate with the Hawaii Department of Education to execute an educational contribution agreement to satisfy the State's school impact fee requirements.		
Solid Waste Disposal and Recycling (Feasibility and Capacity)	The proposed project will support recycling as much as possible for both households and commercial uses as well as green wastes generated onsite. Detailed design will include but not be limited to onsite facilities to support separating wastes into recyclable and non-recyclable materials and for central collection facilities within the buildings. MWH Partners, LLC will also work with the City and contracted collection services to ensure as much recyclable materials are diverted from the waste stream from the project as they will be managing ongoing operations of the site once construction is complete. All remaining non-hazardous waste generated by the project must be disposed of at a solid waste management facility that complies with applicable State regulations of HAR, Chapter 11-58.1. No open burning of wastes either onsite or offsite will be permitted.	N/A	
Public Safety - Police, Fire and Emergency Medical	Project designers will continue to work closely with City Police, the Honolulu Fire Department, and other public service providers during the detailed design of the facilities to ensure the new structures at MWH will be easily accessible by emergency services to support favorable response times.	N/A	
Transportation and Accessibility (Access and	Please see Attachment 10 - Mitigation Measures and Conditions	N/A	

Capacity)			
Vegetation / Wildlife (Introduction, Modification, Removal, Disruption, etc.)	Please see Attachment 10 - Mitigation Measures and Conditions	N/A	
Permits, reviews and approvals	No permits that involve the use of federal funds for the proposed project have been obtained to date.	N/A

APPENDIX A: Related Federal Laws and Authorities

Airport Hazards

General policy	Legislation	Regulation
It is HUD's policy to apply standards to prevent incompatible development around civil airports and military airfields.		24 CFR Part 51 Subpart D

1. To ensure compatible land use development, you must determine your site's proximity to civil and military airports. Is your project within 15,000 feet of a military airport or 2,500 feet of a civilian airport?

✓ **No**

Based on the response, the review is in compliance with this section. Document and upload the map showing that the site is not within the applicable distances to a military or civilian airport below

Yes

Screen Summary

Compliance Determination

No impact. The site location is not within 2,500 feet of a civil air operation. The closest airport is the Daniel K. Inouye International Airport (HNL) approximately 2.7 miles away and separated from HNL airport by Honolulu Harbor and Keehi Lagoon. HNL is part of the State of Hawaii Airport System and is owned and operated by the State of Hawaii Department of Transportation (DOT). Future development activities related to this project that require further review and permits will follow the relevant guidance in the DOT-Airports Technical Assistance Memorandum for Daniel K. Inouye International Airport. The runways at HNL are also utilized for military operations. Properties located within 2,500 feet of a civil airport or 15,000 feet from the end of a runway at a military airfield should be identified. Those within 8,000 feet of a military airfield require a written finding made by the airport or airfield operator stating whether or not the property proposed for assistance is located within a runway Clear Zone (CZ) (civil airport) or Clear Zone or Accident Potential Zone (military airfield). The project site is not within 2,500 feet of a civil airport. The end of the nearest runway, 26L, is located +/- 14,300 feet from the project site and is therefore identified as being in excess of 8,000 feet, but within 15,000 feet of the end of a military airfield. A written finding is therefore not required. However, because the nearest runway (26L) at Daniel K. Inouye

International Airport is approximately 14,300 feet from the project site, which is within 20,000 feet, an FAA FORM 7460-1 will be required for future construction equipment and staging area heights, including temporary construction crane heights in the submittal.Figure 5 shows the distance of the project to HNL. Figure 22 shows the airport airspace in relation to the site. The site is not within the Accident Potential Zone.

Figure 22 - Daniel K Inouye International Airport Airspace Drawing.pdf

Are formal compliance steps or mitigation required?

Yes

✓ No

Coastal Barrier Resources

General requirements	Legislation	Regulation
HUD financial assistance may not be used for most activities in units of the Coastal Barrier Resources System (CBRS). See 16 USC 3504 for limitations on federal expenditures affecting the CBRS.	Coastal Barrier Resources Act (CBRA) of 1982, as amended by the Coastal Barrier Improvement Act of 1990 (16 USC 3501)	

This project is located in a state that does not contain CBRA units. Therefore, this project is in compliance with the Coastal Barrier Resources Act.

Compliance Determination

No impact. The project is not located within a designated coastal barrier resource area. There are no coastal barrier resources within the State of Hawaii, as shown on the U.S. Fish and Wildlife Services Coastal Barrier Resources System Mapper (see Exhibit 1). Therefore, the proposed improvements will have no impact on these resources nor will mitigation measures be necessary.

Supporting documentation

Exhibit 1 Coastal Barrier.pdf

Are formal compliance steps or mitigation required?

Yes

✓ No

Flood Insurance

General requirements	Legislation	Regulation
Certain types of federal financial assistance may not be used in floodplains unless the community participates in National Flood Insurance Program and flood insurance is both obtained and maintained.	Flood Disaster Protection Act of 1973 as amended (42 USC 4001-4128)	24 CFR 50.4(b)(1) and 24 CFR 58.6(a) and (b); 24 CFR 55.1(b).

1. Does this project involve financial assistance for construction, rehabilitation, or acquisition of a mobile home, building, or insurable personal property?

✓ No. This project does not require flood insurance or is excepted from flood insurance.

Based on the response, the review is in compliance with this section.

Yes

Screen Summary

Compliance Determination

No impact. The project site is located in Zone X, which is defined as an area outside of the 500-year floodplain. This is documented by FEMA Flood Insurance Rate Map Panel 354, Map Number 15003C0354G, dated January 19, 2011 (see Exhibit 2). Zone X is determined by the National Flood Insurance Program as an area of minimal flood hazard. A FEMA revalidation letter, dated November 4, 2014, includes revisions to the FIRM panel 15003C0354G. However, none of the revisions are located at or near the project site. The FEM Flood Map Service Center website (https://msc.fema.gove/portal/home) was also checked again on April 8, 2020 for the latest FIRM panel and found the same FIRM panel.

Supporting documentation

Exhibit 2 NEW FIRM FHAT and Revalidation.pdf

Are formal compliance steps or mitigation required?

Yes

✓ No

Air Quality

General requirements	Legislation	Regulation
The Clean Air Act is administered by the U.S. Environmental Protection Agency (EPA), which sets national standards on ambient pollutants. In addition, the Clean Air Act is administered by States, which must develop State Implementation Plans (SIPs) to regulate their state air quality. Projects funded by HUD must demonstrate that they conform to the appropriate SIP.	Clean Air Act (42 USC 7401 et seq.) as amended particularly Section 176(c) and (d) (42 USC 7506(c) and (d))	40 CFR Parts 6, 51 and 93

1. Does your project include new construction or conversion of land use facilitating the development of public, commercial, or industrial facilities OR five or more dwelling units?

✓ Yes

No

Air Quality Attainment Status of Project's County or Air Quality Management District

2. Is your project's air quality management district or county in non-attainment or maintenance status for any criteria pollutants?

✓ No, project's county or air quality management district is in attainment status for all criteria pollutants.

Yes, project's management district or county is in non-attainment or maintenance status for the following criteria pollutants (check all that apply):

Screen Summary

Compliance Determination

No impact. The ambient air quality of the Site meets all Federal and State standards. According to the Environmental Protection Agency, the entire state of Hawaii is a designated attainment area. The information was accessed online at the following website: https://www.epa.gov/green-book in December 2019 and is included in Exhibit 3. The proposed project is located between the monitoring stations identified as

"Honolulu"□ to the east and "Sand Island"□ to the south-west. The locations of these stations are identified in Section 3 of the December 2016 State of Hawaii Annual Summary 2016 Air Quality Data (2016AQD) report. Section 4 of 2016AQD report identifies stations that exceeded National Ambient Air Quality Standards during 2016. There were no exceedances of National Ambient Air Quality Standards at either the Honolulu or Sand Island Stations during 2016. No exceedances of any of the National Ambient Air Quality Standards have been recorded at any Oahu monitoring stations in the last 5 years. A list of all exceedances recorded in the State of Hawaii between January 2014 and December 2019 are available at the following website: http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/ and are included in Exhibit 3. Section 6 of the HI2016AQD report compares all of the State's monitoring stations including Sand Island and Honolulu to State and Federal Standards. The 5-year trend for both stations indicates that values for criteria pollutant from air samples collected from each station are below State and Federal ambient air quality levels. Section 6 of the 2016 report is included in Exhibit 3.

Are formal compliance steps or mitigation required?

Yes

✓ No

Coastal Zone Management Act

General requirements	Legislation	Regulation
Federal assistance to applicant agencies for activities affecting any coastal use or resource is granted only when such activities are consistent with federally approved State Coastal Zone Management Act Plans.	Coastal Zone Management Act (16 USC 1451-1464), particularly section 307(c) and (d) (16 USC 1456(c) and (d))	15 CFR Part 930

1. Is the project located in, or does it affect, a Coastal Zone as defined in your state Coastal Management Plan?

✓ Yes

No

2. Does this project include new construction, conversion, major rehabilitation, or substantial improvement activities?

Yes

✓ No

Based on the response, the review is in compliance with this section.

Screen Summary

Compliance Determination

No impact. All lands in the State of Hawaii are within the Coastal Zone Management Area. In a letter dated June 24, 2004 the Department of Business, Economic Development and Tourism's Office of Planning indicated that the Hawaii Coastal Zone Management program does not review any HUD assistance programs, grants, or loans for federal consistency, but that Coastal Zone Management regulations relating to actions within the Special Management Areas and Shoreline Setback still apply. This information was re-confirmed by John Nakagawa of the Hawaii State Office of Planning, Coastal Zone Management Program via phone on February 5, 2019 (see Exhibit 4). The proposed project is not within the Special Management Area; therefore, no further

consultation is required (see Figure 29).

Are formal compliance steps or mitigation required?

Yes

✓ No

Contamination and Toxic Substances

General requirements	Legislation	Regulations
It is HUD policy that all properties that are being proposed for use in HUD programs be free of hazardous materials, contamination, toxic chemicals and gases, and radioactive substances, where a hazard could affect the health and safety of the occupants or conflict with the intended utilization of the property.		24 CFR 58.5(i)(2) 24 CFR 50.3(i)

1. How was site contamination evaluated? Select all that apply. Document and upload documentation and reports and evaluation explanation of site contamination below.

- ✓ American Society for Testing and Materials (ASTM) Phase I Environmental Site Assessment (ESA)
- ✓ ASTM Phase II ESA
- Remediation or clean-up plan
- ASTM Vapor Encroachment Screening
- None of the Above

2. Were any on-site or nearby toxic, hazardous, or radioactive substances found that could affect the health and safety of project occupants or conflict with the intended use of the property? (Were any recognized environmental conditions or RECs identified in a Phase I ESA and confirmed in a Phase II ESA?)

No

✓ Yes

3. Mitigation

Document and upload the mitigation needed according to the requirements of the appropriate federal, state, tribal, or local oversight agency. If the adverse environmental effects cannot be mitigated, then HUD assistance may not be used for the project at this site.

Can adverse environmental impacts be mitigated?

Adverse environmental impacts cannot feasibly be mitigated.

✓ Yes, adverse environmental impacts can be eliminated through mitigation. Document and upload all mitigation requirements below.

4. Describe how compliance was achieved in the text box below. Include any of the following that apply: State Voluntary Clean-up Program, a No Further Action letter, use of engineering controls, or use of institutional controls.

Please see Attachment 10 - Mitigation Measures & Conditions

If a remediation plan or clean-up program was necessary, which standard does it follow?

✓ Yes

No

Endangered Species

General requirements	ESA Legislation	Regulations
Section 7 of the Endangered Species Act (ESA) mandates that federal agencies ensure that actions that they authorize, fund, or carry out shall not jeopardize the continued existence of federally listed plants and animals or result in the adverse modification or destruction of designated critical habitat. Where their actions may affect resources protected by the ESA, agencies must consult with the Fish and Wildlife Service and/or the National Marine Fisheries Service ("FWS" and "NMFS" or "the Services").	The Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq*.); particularly section 7 (16 USC 1536).	50 CFR Part 402

1. Does the project involve any activities that have the potential to affect specifies or habitats?

No, the project will have No Effect due to the nature of the activities involved in the project.

No, the project will have No Effect based on a letter of understanding, memorandum of agreement, programmatic agreement, or checklist provided by local HUD office

✓ Yes, the activities involved in the project have the potential to affect species and/or habitats.

2. Are federally listed species or designated critical habitats present in the action area?

✓ No, the project will have No Effect due to the absence of federally listed species and designated critical habitat

Based on the response, the review is in compliance with this section. Document and upload all documents used to make your determination below. Documentation may include letters from the Services, species lists from the Services' websites, surveys or other documents and analysis showing that there are no species in the action area.

Yes, there are federally listed species or designated critical habitats present in the action area.

Screen Summary

Compliance Determination

A biological survey was conducted in May of 2016 that closely examined all existing vegetation present at the site as well as any other vegetation that may likely occur based on the location of the property. A fauna survey of the site was also conducted concurrently. These studies are included in Exhibit 7. No federally designated critical habitats are within the immediate vicinity of the proposed project. However, the U.S. Fish & Wildlife Service data indicates that the following federally-listed species may occur or transit through the vicinity of the proposed project area: endangered Hawaiian hoary bat (Lasiurus cinereus semotus); endangered Hawaiian petrel (Pterodroma sandwichensis), threatened Newell's shearwater (Puffinus auricularis newelli), and endangered Hawaii Distinct Population Segment (DPS) of the band-rumped storm-petrel (Oceanodroma castro). As such, mitigation measures are included to minimize any potential impacts to endangered or threatened species traversing the project site.

Supporting documentation

Exhibit 7 Flora Fauna Mayor Wright Homes redevelopment.pdf

Are formal compliance steps or mitigation required?

✓ Yes

No

Explosive and Flammable Hazards

General requirements	Legislation	Regulation
HUD-assisted projects must meet Acceptable Separation Distance (ASD) requirements to protect them from explosive and flammable hazards.	N/A	24 CFR Part 51 Subpart C

1. Is the proposed HUD-assisted project itself the development of a hazardous facility (a facility that mainly stores, handles or processes flammable or combustible chemicals such as bulk fuel storage facilities and refineries)?

✓ No

Yes

2. Does this project include any of the following activities: development, construction, rehabilitation that will increase residential densities, or conversion?

No

✓ Yes

3. Within 1 mile of the project site, are there any current or planned stationary aboveground storage containers that are covered by 24 CFR 51C? Containers that are NOT covered under the regulation include:

- **Containers 100 gallons or less in capacity, containing common liquid industrial fuels OR**
- **Containers of liquified petroleum gas (LPG) or propane with a water volume capacity of 1,000 gallons or less that meet the requirements of the 2017 or later version of National Fire Protection Association (NFPA) Code 58.**

If all containers within the search area fit the above criteria, answer "No." For any other type of aboveground storage container within the search area that holds one of the flammable or explosive materials listed in Appendix I of 24 CFR part 51 subpart C, answer "Yes."

✓ No

Based on the response, the review is in compliance with this section. Document and upload all documents used to make your determination below.

Yes

Screen Summary

Compliance Determination

No Impact. The Phase I Environmental Site Assessment (ESA) (Exhibit 5) included site reconnaissance to evaluate the current use of the project site, as well as adjacent and near-by properties. An Environmental Data Radius Map Report was contracted as part of the Phase I ESA and no above ground storage tanks were noted within a one-mile radius of the project site (see Exhibit 5). The project site is not anticipated to be affected by hazardous operations that could result in flammable or explosive conditions.

Floodplain Management

General Requirements	Legislation	Regulation
Executive Order 11988, Floodplain Management, requires federal activities to avoid impacts to floodplains and to avoid direct and indirect support of floodplain development to the extent practicable.	Executive Order 11988	24 CFR 55

1. Do any of the following exemptions apply? Select the applicable citation? [only one selection possible]

55.12(c)(3)
55.12(c)(4)
55.12(c)(5)
55.12(c)(6)
55.12(c)(7)
55.12(c)(8)
55.12(c)(9)
55.12(c)(10)
55.12(c)(11)
✓ None of the above

2. Upload a FEMA/FIRM map showing the site here:

Exhibit 2 FIRM FHAT(1).pdf

The Federal Emergency Management Agency (FEMA) designates floodplains. The FEMA Map Service Center provides this information in the form of FEMA Flood Insurance Rate Maps (FIRMs). For projects in areas not mapped by FEMA, use **the best available information** to determine floodplain information. Include documentation, including a discussion of why this is the best available information for the site.

Does your project occur in a floodplain?

✓ No

Based on the response, the review is in compliance with this section.

Yes

Screen Summary

Compliance Determination

No impact. The Flood Insurance Rate Map (FIRM) panel number 15003C0354G indicates that the proposed project site is located within Zone X, an area outside of the 500-year floodplain (see Exhibit 2). Flooding may still be possible in extreme events but poses a minimal flood hazard. Formal compliance and mitigation are not required.

Historic Preservation

General requirements	Legislation	Regulation
Regulations under Section 106 of the National Historic Preservation Act (NHPA) require a consultative process to identify historic properties, assess project impacts on them, and avoid, minimize, or mitigate adverse effects	Section 106 of the National Historic Preservation Act (16 U.S.C. 470f)	36 CFR 800 "Protection of Historic Properties" http://www.access.gpo.gov/nara/cfr/waisidx_10/36cfr800_10.html

Threshold

Is Section 106 review required for your project?

No, because the project consists solely of activities listed as exempt in a Programmatic Agreement (PA). (See the PA Database to find applicable PAs.)

No, because the project consists solely of activities included in a No Potential to Cause Effects memo or other determination [36 CFR 800.3(a)(1)].

✓ Yes, because the project includes activities with potential to cause effects (direct or indirect).

Step 1 – Initiate Consultation

Select all consulting parties below (check all that apply):

✓ State Historic Preservation Offer (SHPO) Completed

✓ Advisory Council on Historic Preservation Completed

✓ Indian Tribes, including Tribal Historic Preservation Officers (THPOs) or Native Hawaiian Organizations (NHOs)

Other Consulting Parties

Describe the process of selecting consulting parties and initiating consultation here:

Please see Attachment 4 (in Appendix A).

Document and upload all correspondence, notices and notes (including comments and objections received below).

Step 2 – Identify and Evaluate Historic Properties

1. **Define the Area of Potential Effect (APE), either by entering the address(es) or uploading a map depicting the APE below:**
   The Area of Potential Effect is depicted in Figure 30.

   In the chart below, list historic properties identified and evaluated in the APE. Every historic property that may be affected by the project should be included in the chart.

   Upload the documentation (survey forms, Register nominations, concurrence(s) and/or objection(s), notes, and photos) that justify your National Register Status determination below.

Address / Location / District	National Register Status	SHPO Concurrence	Sensitive Information

   Additional Notes:

   Please see Exhibit 9 - Reconnaissance Level Survey of Multiple Properties Located Within the Selected Area of Potential Effect.

2. **Was a survey of historic buildings and/or archeological sites done as part of the project?**

   ✓ Yes

   Document and upload surveys and report(s) below.
   For Archeological surveys, refer to HP Fact Sheet #6, Guidance on Archeological Investigations in HUD Projects.

   Additional Notes:

No

Step 3 –Assess Effects of the Project on Historic Properties

Only properties that are listed on or eligible for the National Register of Historic Places receive further consideration under Section 106. Assess the effect(s) of the project by applying the Criteria of Adverse Effect. (36 CFR 800.5)] Consider direct and indirect effects as applicable as per guidance on direct and indirect effects.

Choose one of the findings below - No Historic Properties Affected, No Adverse Effect, or Adverse Effect; and seek concurrence from consulting parties.

No Historic Properties Affected

No Adverse Effect

✓ Adverse Effect

Document reason for finding; upload the criteria with summary and justification. Criteria of Adverse Effect 36 CFR 800.5.

Please see Attachment 4 (in Appendix A)

Step 4 – Resolve Adverse Effects

Work with consulting parties to try to avoid, minimize or mitigate adverse effects. Refer to ATEC guidance and 36 CFR 800.6 and 800.7.

Were the Adverse Effects resolved?

✓ Yes

Describe the resolution of Adverse Effects, including consultation efforts and participation by the Advisory Council on Historic Preservation:

Please see Attachment 10 - Mitigation Measures and Conditions

For the project to be brought into compliance with this section, all adverse impacts must be mitigated. Explain in detail the exact measures that must be implemented to mitigate for the impact or effect, including the timeline for implementation.

Please see Attachment 10 - Mitigation Measures and Conditions

Based on the response, the review is in compliance with this section. Document and upload the signed Memorandum of Agreement (MOA) or Standard Mitigation Measures Agreement (SMMA) below.

No

Noise Abatement and Control

General requirements	Legislation	Regulation
HUD's noise regulations protect residential properties from excessive noise exposure. HUD encourages mitigation as appropriate.	Noise Control Act of 1972 General Services Administration Federal Management Circular 75-2: "Compatible Land Uses at Federal Airfields"	Title 24 CFR 51 Subpart B

1. What activities does your project involve? Check all that apply:

✓ New construction for residential use

NOTE: HUD assistance to new construction projects is generally prohibited if they are located in an Unacceptable zone, and HUD discourages assistance for new construction projects in Normally Unacceptable zones. See 24 CFR 51.101(a)(3) for further details.

Rehabilitation of an existing residential property

A research demonstration project which does not result in new construction or reconstruction

An interstate land sales registration

Any timely emergency assistance under disaster assistance provision or appropriations which are provided to save lives, protect property, protect public health and safety, remove debris and wreckage, or assistance that has the effect of restoring facilities substantially as they existed prior to the disaster
None of the above

4**. Complete the Preliminary Screening to identify potential noise generators in the vicinity (1000' from a major road, 3000' from a railroad, or 15 miles from an airport).**

Indicate the findings of the Preliminary Screening below:

There are no noise generators found within the threshold distances above.

✓ Noise generators were found within the threshold distances.

5. **Complete the Preliminary Screening to identify potential noise generators in the**

✓ Acceptable: (65 decibels or less; the ceiling may be shifted to 70 decibels in circumstances described in §24 CFR 51.105(a))

Indicate noise level here: 64

Based on the response, the review is in compliance with this section. Document and upload noise analysis, including noise level and data used to complete the analysis below.

Normally Unacceptable: (Above 65 decibels but not exceeding 75 decibels; the floor may be shifted to 70 decibels in circumstances described in §24 CFR 51.105(a))

Unacceptable: (Above 75 decibels)

HUD strongly encourages conversion of noise-exposed sites to land uses compatible with high noise levels.

Check here to affirm that you have considered converting this property to a non-residential use compatible with high noise levels.

Indicate noise level here: 64

Document and upload noise analysis, including noise level and data used to complete the analysis below.

Sole Source Aquifers

General requirements	Legislation	Regulation
The Safe Drinking Water Act of 1974 protects drinking water systems which are the sole or principal drinking water source for an area and which, if contaminated, would create a significant hazard to public health.	Safe Drinking Water Act of 1974 (42 U.S.C. 201, 300f et seq., and 21 U.S.C. 349)	40 CFR Part 149

1. Does the project consist solely of acquisition, leasing, or rehabilitation of an existing building(s)?

Yes

✓ No

2. Is the project located on a sole source aquifer (SSA)?

A sole source aquifer is defined as an aquifer that supplies at least 50 percent of the drinking water consumed in the area overlying the aquifer. This includes streamflow source areas, which are upstream areas of losing streams that flow into the recharge area.

No

✓ Yes

3. Does your region have a memorandum of understanding (MOU) or other working agreement with Environmental Protection Agency (EPA) for HUD projects impacting a sole source aquifer?

✓ Yes

Document and upload MOU or Agreement below.

No

4. For the project to be brought into compliance with this section, all adverse impacts must be mitigated. Explain in detail the exact measures that must be implemented to mitigate for the impact or effect, including the timeline for implementation. This information will be automatically included in the Mitigation summary for the environmental review. If negative effects cannot be mitigated, cancel the project using the button at the bottom of this screen

✓ Yes

Document and upload where your project fits within the MOU or working agreement below. Based on the response, the review is in compliance with this section.

No

Screen Summary

Compliance Determination

No impact. The project site is located within the boundaries of the Southern Oahu Basal Aquifer as identified on Figure 7. In a Memorandum of Understanding (MOU) between the EPA and HUD dated May 17, 1990, section II.B identified HUD activities that would not affect water quality. Such activities need not be referred to the EPA for evaluation. Actions associated with the project are exempt from further evaluation based on II.B.1- for Projects served by existing publicly owned/operated sewerage systems and treatment plants that are not subject to locally or EPA imposed moratoriums or otherwise covered by the MOU. A memorandum detailing the implementation of the MOU dated May 1991 is included as Exhibit 16.

Wetlands Protection

General requirements	Legislation	Regulation
Executive Order 11990 discourages direct or indirect support of new construction impacting wetlands wherever there is a practicable alternative. The Fish and Wildlife Service's National Wetlands Inventory can be used as a primary screening tool, but observed or known wetlands not indicated on NWI maps must also be processed Off-site impacts that result in draining, impounding, or destroying wetlands must also be processed.	Executive Order 11990	24 CFR 55.20 can be used for general guidance regarding the 8 Step Process.

1. Does this project involve new construction as defined in Executive Order 11990, expansion of a building's footprint, or ground disturbance? The term "new construction" shall include draining, dredging, channelizing, filling, diking, impounding, and related activities and any structures or facilities begun or authorized after the effective date of the Order

✓ No

Based on the response, the review is in compliance with this section.

Yes

Screen Summary

Compliance Determination

No impact. According to the National Wetlands Inventory, there are no wetlands on or near the Site (U.S. Fish and Wildlife Service, accessed December 2019) (see Exhibit 17) and no mitigation measures are proposed.

Are formal compliance steps or mitigation required?

Yes

✓ No

Environmental Justice

General requirements	Legislation	Regulation
Determine if the project creates adverse environmental impacts upon a low-income or minority community. If it does, engage the community in meaningful participation about mitigating the impacts or move the project.	Executive Order 12898	

HUD strongly encourages starting the Environmental Justice analysis only after all other laws and authorities, including Environmental Assessment factors if necessary, have been completed.

1. Were any adverse environmental impacts identified in any other compliance review portion of this project's total environmental review?

✓ Yes

No

2. Were these adverse environmental impacts disproportionately high for low-income and/or minority communities?

Yes

✓ No

Explain:
The MWH Redevelopment project is located in a predominantly minority and low-income neighborhood. However, the site and the surrounding neighborhood do not suffer from disproportionately adverse environmental effects on minority and low-income populations relative to the community at large.

Based on the response, the review is in compliance with this section. Document and upload any supporting documentation below.

Screen Summary
Compliance Determination
No impact. The MWH Redevelopment project is located in a predominantly minority

and low-income neighborhood. However, the site and the surrounding neighborhood do not suffer from disproportionately adverse environmental effects on minority and low-income populations relative to the community at large. The updated 2018 EJSCREEN Report for the MWH census tract and one-mile ring surrounding it is included as Exhibit 19 and notes that MWH rates relatively high in State, EPA region, and national percentiles on nine of the eleven environmental indexes, which further supports the redevelopment of the site into a more sustainable project. The report also notes that there are currently no Superfund sites located within the EJSCREEN search area. However, there are four hazardous waste treatment, storage, or disposal facilities within the EJSCREEN search area. As such, the notion of environmental justice has been evaluated and there will be no activity performed with HUD or other Federal funds that will in any way create discrimination or isolation of minority or low-income individuals based on the siting or purpose of the MWH Redevelopment. The proposed development is not anticipated to create, expose, or disproportionately affect minority or low-income persons in comparison to the rest of the population. Therefore, it is in compliance with E.O. 12898 and no mitigation measures are proposed.

ATTACHMENT 1

Statement of Purpose and Need for the Proposal [40 CFR 1508.9(b)]:

The State of Hawai‘i and City and County of Honolulu are currently experiencing a housing crisis. Due to an increasingly high demand for housing, coupled with a decades-low housing supply, limited land, and high production costs, Honolulu consistently ranks among the most expensive residential rental markets in the nation. As housing costs in Hawai‘i continue to increase, the number of available affordable apartments continues to decline leaving low to moderate-income households with limited housing options. Consequently, many of these households are forced to relocate greater distances from their place of work in urban Honolulu, resulting in secondary impacts such as lengthening commute times, exacerbating traffic congestion, increasing pollution, social and environmental impacts associated with traffic congestion and a decreasing quality of life for commuters. In a worst-case scenario, many of these residents may be displaced altogether.

The 2015 installment of Paycheck to Paycheck from the Center for Housing Policy at the National Housing Conference showed Honolulu ranked as the sixth most expensive market to purchase housing and the second most expensive rental market in the nation. According to the residential market study prepared by Ricky Cassiday for the project, the accumulation of unmet housing need on O‘ahu from the year 2000 to 2015 was over 17,600 units and recent trends show that only about 40 percent of what is estimated for housing production in the next five to six years will address the projected housing demand (Cassiday, 2016). Recent studies have projected a gap of 10,226 residential units for O‘ahu between 2016 and 2020, with roughly half of them needed as rental units including 3,593 multifamily rental units (Belt Collins Hawaii, LLC, 2017).

For the multifamily market in Honolulu, the market study prepared for the Downtown Neighborhood Transit-Oriented Development (TOD) Plan found that the average number of building permits pulled over the past 20 years was about 1,200 per year. It notes that, "despite high demand for rental housing opportunities in the urban core, there has been almost no new development of market rate [rental] apartments in years, a reflection of the discrepancy between the values of for-sale condominiums versus those supported by apartment rents. The rental housing stock in Honolulu is generally a combination of older market rate apartments, public housing or other subsidized housing, and for-sale condominiums that owner/investors are renting" (Keyser Marston Associates, Inc., 2011).

The market study for the Downtown Neighborhood TOD Plan also states that "the Iwilei Station presents good opportunities for TOD to occur on a large-scale due to the fact that the area has a number of underutilized properties that are likely to be candidates for redevelopment" (Keyser Marston Associates, Inc., 2011). They estimated that the Downtown neighborhood area, which includes a half-mile radius around the Downtown, Chinatown, and Iwilei transit stations, could support an additional 6,000 new dwelling units (based on demand), 485,000 square feet of new TOD-oriented retail, and 910,000 square feet of office by 2035 (Keyser Marston Associates, Inc., 2011).

The TOD market study also noted that the mix of TOD-type retail demand in the area would be for small- to medium-format stores, with the largest of these stores being in the 50,000 to 60,000 SF range, or the size of a modern grocery store. It also notes that "a portion of the retail demand, perhaps in the ten to fifteen percent range, could be supported on the ground floor of mixed-use buildings, with residential or office uses above."

On June 29, 2016, SB2561, SD2, HD1, CD1, was signed into law as Act 12, Session Laws of Hawai‘i (SLH), to address the affordable rental housing crisis by establishing an affordable rental housing goal, and a Special Action Team (SAT) on affordable rental housing. The SAT is chaired by the Director of the State Office of Planning (OP) and its mission is to recommend actions to promote affordable rental housing. The

primary goal of Act 127 is to develop or vest the development of at least 22,500 affordable rental housing units, ready for occupancy, between January 1, 2017 and December 31, 2026.

According to the "Special Action Team on Affordable Rental Housing Report to the Hawai‘i State Legislature in Response to Act 127, Session Laws of Hawai‘i 2016" (State of Hawaii Office of Planning, 2016):

> *Housing is considered "affordable" when a household spends less than 30 percent of their income on shelter and utilities. But affordable housing is a serious challenge for Hawai‘i's low-income residents, who face one of the highest housing cost in the country. In a market with some of the most expensive for-sale homes in the county, 43% of the state's households must rent. This is even more difficult for Hawai‘i's residents as rent increases, but wages have not kept pace. There is a sense of urgency in developing needed rental housing units, particularly for households in the rental housing "gap" group (i.e., those earning between 60% and 80% of the area median income (AMI)). The need for affordable housing is particularly acute for households with low incomes.*

The proposed project specifically responds to this urgent need for affordable rental housing and is an excellent candidate for redevelopment for the following reasons:

(i) The proposed project is ideally located in the Honolulu's Primary Urban Center, close to existing employment centers, infrastructure, and transportation networks, which is highly consistent with the City and County of Honolulu's General Plan.

(ii) The Honolulu City Council adopted the Downtown Neighborhood TOD Plan on September 6, 2017 as City Council Resolution No. 16-247, CD1, FD1 permitting building heights up to 400 feet and a FAR up to 7.5 for the proposed project site.

(iii) The overall intensification of land uses within the Kalihi-Kapālama-Iwilei corridor is a major goal of the City and County of Honolulu's long-range vision and general development pattern goals which emphasize the need for the existing urban core around Honolulu to remain O‘ahu's primary urban center.

(iv) The proposed project will reduce the pressure to develop in more rural areas that may be more adversely impacted by a project of similar scale and which may not have sufficient infrastructure, utilities, or access to transportation networks.

(v) The proposed project is well serviced by O‘ahu's existing bus transit system. It is also located less than a third-of-a-mile from the planned Iwilei Transit Station of the Honolulu Light Rail Transit Project and has been designed with thoughtful consideration to equitable Transit Oriented Development (TOD) design principles and may contribute to reductions in impacts such as traffic and related fuel consumption and air pollution.

(vi) The conceptual master plan for the proposed project has been designed in accordance with City and County of Honolulu Complete Streets Ordinance (Section 14-33, ROH) and envisions incorporating retail and commercial uses at street level of the new buildings, complimenting existing area uses, and providing necessary services for area residents.

(vii) The proposed project is expected to result in a reinvigorated community with well-connected thoroughfares together with interconnected and activated streets that will encourage walking and biking, which in turn support community safety.

(viii) The proposed project incorporates well designed recreational spaces combined with green building and sustainability concepts that will contribute to improved individual health, wellbeing, quality of life and sense of connectedness for existing and future residents.

(ix) The proposed project represents the efficient use of public resources by leveraging both private and public funding to redevelop an existing urbanized site.

(x) The proposed project attempts to balance the potential impacts of intensification of use onsite with the social and environmental considerations of creating a high-quality, comfortable, and inviting community to live, work, and play with the potential for far-reaching transformative positive community impacts well beyond the boundaries of the project site.

The Mayor Wright Homes redevelopment will not only improve the housing conditions for its current residents, but will convert an existing, obsolete, state-owned asset, into a new, mixed-income, mixed-use, transit-oriented development complementing the existing vibrant Kalihi, Liliha, Kapālama, and Iwilei communities and facilitating the delivery of urgently needed new rental housing units to help address the existing affordable rental housing crises across the State of Hawai‘i.

ATTACHMENT 2

Existing Conditions and Trends [24 CFR 58.40(a)]:

Named for George F. Wright, the seventh mayor of Honolulu, Mayor Wright Homes is a federally funded low-income housing project that is owned and operated by the Hawai‘i Public Housing Authority. The current facilities consist of 35 two-story and three-story walk-up buildings with a total of 364 low-income rental units providing housing for approximately 1,500 residents. The property is subject to a Declaration of Trust with the U.S. Department of Housing and Urban Development (HUD) and has been used for public housing since its construction completed in 1953. Although the project was recently upgraded in 1984, the existing units are functionally obsolete and have outlasted their useful life.

There are 24 one-bedroom units, 114 two-bedroom units, 168 three-bedroom units, 50 four-bedroom units, and 8 five-bedroom units. The housing project also includes a two-story common area building fronting Kukui Street near Liliha Street with a community center and administrative offices, as well as a small playground at the center of the site. The existing buildings are arranged roughly in pairs forming courtyards. The open spaces between the buildings do not follow any hierarchy, and paved parking lots, sidewalks, and grassed courtyards weave through the property in varying patterns. See Figure 4.

There are 371 on-grade, outdoor parking stalls located throughout the site and vegetation is limited primarily to grass, a few shower and pink tecoma trees, and individual residents' landscaping around their units. Visitor parking is provided along North Kukui Street and near the Administration Building. The entire perimeter of the site is either fenced or walled off from the surrounding streets. Vehicle access to the site is limited to Kukui Street, which has gated entries on Pua Lane and Liliha Street. Visitors must check in with the guards stationed at each entrance. Three additional pedestrian-only accesses are located at the corner of North King and Liliha Streets and two on Pua Lane. The pedestrian-only gates are typically secured at 10:00 PM nightly and the two vehicle accesses are monitored by security personnel 24-hours a day, 7-days a week. The Hawai‘i Public Housing Authority has roving security guards on patrol and security cameras throughout the property.

Within the vicinity of the property is a mix of residential and commercial uses, churches, community services, and schools including Princess Victoria Ka‘iulani Elementary School and Honolulu Community College across North King Street. The Kalihi/Iwilei/Kapālama areas have long been associated with industrial uses and working-class communities. However, prior to this, the immediate project area was once a community of Honolulu’s elite including the former Royal Residences of Kapālama, originally built and inhabited by Queen Lili‘uokalani and Princess Ruth Ke‘elikōlani. The areas along Honolulu Harbor were filled throughout the nineteenth century and roads and schools also increased connections between Kalihi and other regions of Honolulu including Nu‘uanu and Chinatown. The area started to lose favor with the elite by the 1870s and the lands were covered by tenements housing recent immigrants and those displaced by the two Chinatown fires of 1886 and 1900.

The Honolulu Authority for Rapid Transportation's Iwilei rail station is currently planned to be located near the intersection of Ka‘a‘ahi Street and Dillingham Boulevard, within a quarter-mile of the makai (oceanside) edge of the project site. In September 2017, the Honolulu City Council adopted the *Downtown Neighborhood Transit-Oriented Development (TOD) Plan* (TOD Plan), which addresses land use, local transportation, public facilities and services, economics, infrastructure planning, and options for implementation around the three Downtown Honolulu rail stations: Downtown, Chinatown, and Iwilei. The TOD Plan envisions the Iwilei area where the proposed project is located as the most “transformative,” calling for “a new high-intensity mixed-use Iwilei district.” In its Overall Concept, it describes Iwilei as follows:

> *This new full-service neighborhood, with residences, public facilities, and neighborhood shopping services, serves as an extension of Downtown and a transition to Kalihi. It creates an opportunity for new housing within walking distance of Chinatown and Downtown.…New streets and paths break up the large blocks in Iwilei and improve accessibility to Iwilei station, Dole Cannery, Kukui Gardens, Mayor Wright Homes, Pālama Settlement, and future uses.* (Dyett and Bhatia, 2017)

The proposed project is located within the TOD Zone around the Iwilei Station. The redevelopment of Mayor Wright Homes is envisioned as a catalytic project consistent with the City and County of Honolulu's overall vision of transforming the area into a transit-oriented development (TOD) within walking distance of Downtown Honolulu and the future Iwilei rail station.

ATTACHMENT 3

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
Contamination and Toxic Substances 24 CFR Part 50.3(i) & 58.5(i)(2)	Yes ☒ No ☐	Mitigation required. A Phase I Environmental Site Assessment was completed by Weston Solutions, Inc. in July 2016 and is attached as Exhibit 5. Onsite testing was not performed as part of this assessment, but it included records research including an Environmental Data Resources, Inc. report, a site reconnaissance, and interviews. In addition, initial testing for asbestos and lead-based paint was performed on one of the existing buildings in August 2015 by EMET Services, Inc. and both were found to be present. Further testing will be done in preparation for demolition and coordination will be made with the State Department of Health Asbestos Abatement Office of the Noise, Radiation and Indoor Air Quality Branch. No hazardous waste discharges, injection wells, or underground storage tanks are included as part of the proposed project and therefore no hazardous waste is anticipated to be generated. No further mitigation measures are therefore proposed for the ongoing operations of the proposed project. Given the age of the existing MWH facilities and the initial finding of lead-based and lead-containing paint and asbestos in one of the existing buildings, Hawai‘i Public Housing Authority and MWH Partners, LLC will coordinate with the State Department of Health Asbestos Abatement Office of the Noise, Radiation and Indoor Air Quality Branch prior to demolition and work with contractors who are specifically trained in lead-based paint and asbestos containing materials abatement to safely remove these hazardous materials and limit any potential exposure to residents who may be onsite during demolition. Demolition activities associated with the proposed project would be subject to the requirements of Title 11 Hawai‘i Administrative Rules (HAR), DOH,

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		Chapter 501, "Asbestos Requirements." The proposed project would complete an Asbestos Renovation/Demolition Survey to determine the potential for the presence of asbestos containing materials. Additionally, all demolition and construction activities would adhere to the provisions of the State Department of Health Construction and Demolition Waste Disposal General Guidance to ensure proper handling of potentially contaminated materials. Full inspections by certified inspectors will be carried out prior to demolition and a lead-based paint and an asbestos-containing materials abatement plan will be developed with all required federal, State, and City agencies prior to demolition. All abatement work will be performed per all applicable State and federal requirements and guidelines. Upon completion of the work, all required clearances will be provided for the abated areas of work and lead based paint chips will be HEPA-vacuumed from the surrounding ground and placed in DOT-approved disposal containers. All material disposal manifests will be provided from certified disposal sites upon final disposition of the hazardous materials. A Phase II Environmental Site Assessment (ESA) was completed by Weston Solutions, Inc. (WESTON) in July 2018. It is attached as Exhibit 6. The objective of the Phase II ESA was to evaluate the Recognized Environmental Conditions at locations identified during WESTON's Phase I ESA (June 2016). The Phase II ESA activities were conducted in April 2018 and included: the collection and analyses of soil samples from 14 soil borings; collection and analysis of surface soils from three decision units; and collection and analysis of groundwater samples collected from four newly installed, temporary, down gradient wells.

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		The WESTON report found no soil sample results collected from soil borings above the State Department of Health Unrestricted Environmental Action Levels (EAL). However, two out of three decision units (DU-06 and DU-35) tested above the HDOH Unrestricted EAL for lead. In addition, one groundwater sample result (GW-01) initially tested above the State Department of Health Unrestricted EAL for bromomethane and therefore was retested. Upon resampling GW-01, the bromomethane result was found to be below the Unrestricted EAL, making all groundwater results below the State Department of Health Unrestricted EALs for all analyzed contaminants. Based on the results and conclusions of the Phase II ESA, lead has been identified in soil at the subject property at concentrations above the Unrestricted Use EAL that may require additional activities to be performed. WESTON recommended the following: • Additional multi-incremental sampling should be performed around all buildings in order to evaluate the lead contamination throughout the Site. • All contaminated soil above the Unrestricted Use EAL should be excavated and disposed of. Waste characterization soil samples should be collected and analyzed by toxicity characteristic leaching procedure to ensure proper disposal at an appropriate landfill. MWH Partners will comply and follow-up with the above recommended mitigation.

ATTACHMENT 4

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
Historic Preservation National Historic Preservation Act of 1966, particularly sections 106 and 110; 36 CFR Part 800	Yes ☒ No ☐	Mitigation required. An Archaeological Inventory Survey, a reconnaissance level survey of historic architectural resources, and a Cultural Impact Assessment were completed for the proposed project. The reconnaissance level survey has been accepted by the State Historic Preservation Division of the State of Hawai‘i Department of Land and Natural Resources. The reconnaissance level survey and the State Historic Preservation Division’s acceptance letter are attached as Exhibit 9. The reconnaissance level survey included all buildings within the MWH project site as well as those within a roughly one- to one and a half-block radius of the site. Of the 161 properties examined, two are presently listed in either the Hawai‘i or National Registers of Historic Places. In addition, another 47 properties appear to meet the criteria for listing in the Hawai‘i and National Registers for their associations with the architectural traditions of Hawai‘i; of these 47 properties, six are already identified in the Statewide Inventory of Historic Places. An additional thirteen properties within the area of potential effects may be potentially eligible once they meet the 50-year age requirement. Three properties were determined to be ineligible as individual properties but are eligible as contributing features to a historic district. Unknown determinations were given to thirteen properties as they were not visible from the public right-of-way. The remaining 83 properties do not appear to meet the criteria for listing in either historic register. Five historic properties were found on the same block as the MWH property and two possible historic

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		districts were identified outside the boundaries of the MWH property. See Figure 18. The existing buildings within the MWH site were previously identified as being eligible for listing in the Hawai‘i or National Registers of Historic Places under Criterion “A” for its association with significant historic events. In this case, it involves MWH's relationship with the development of public housing in Hawai‘i. Therefore, the Governor of the State of Hawai‘i as the Responsible Entity has determined in consultation with the State Historic Preservation Division that the demolition of the existing structures and proposed undertaking will have an adverse effect that will require mitigation. With regards to the Archaeological Inventory Survey, no further work was recommended by the archaeologist, TCP Hawaii (TCP), for the four newly identified subsurface sites found on the MWH property. The evidence gathered during TCP's fieldwork indicated the presence of a project-area wide grading/bulldozing event that appears to have leveled the entire property of any previous structural remains. Also, no basalt boulders typically related to potential traditional, Hawaiian rock-structural remains were found in the excavated trenches other than late historic/early modern pit fills. There was also no naturally-occurring deposits of clean beach or dune sand that typically contain traditional Hawaiian burials found in the test trenches and historical evidence shows that almost the entire project site was a network of lo‘i (pond-field kalo gardens) including lo‘i iloko (kalo pond-field also used as a fishpond) and related house sites in the mid-1800s. By the

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		early 1900s, these ponds were being filled and covered by various low-rise structures and tenement (multifamily) housing, which would then be completely replaced by MWH in 1952. All of these historic properties have been evaluated as significant under Criteria d (State) and D (Federal) for their intrinsic informational value to research on the history and prehistory of Honolulu, its urbanization, and the advent of public housing in the State of Hawai‘i. Based on the State Historic Preservation Division's review of the Archaeological Inventory Survey report and recent consultation with the State Historic Preservation Division, sufficient documentation of the four (4) historic properties identified in the Archaeological Inventory Survey report is complete, and no further archaeological or historic preservation work is needed for these sites. Also, based on consultation with the State Historic Preservation Division, the inventory and identification process for the Archaeological Inventory Survey is complete. However, since there is always a possibility of encountering unexpected cultural resources in urban Honolulu, Archaeological Monitoring in accordance with HAR § 13-13-279 will be conducted during ground-disturbance associated with construction activities for this project. Therefore, under HRS § 6E, a determination of "Effect, with proposed mitigation commitments" (cf. HAR § 13-13-275-7) has been made. Under Section 106 (36 CFR §800.5), a finding of "No Adverse Effect" is proposed for archaeological resources. Finally, prior to commencement of construction, MWH Partners, LLC shall prepare and submit to the

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		State Historic Preservation Division for its approval an Archaeological Monitoring Plan meeting the requirements of HAR §13-279-4. All ground-disturbing work shall proceed in accordance with the approved Archaeological Monitoring Plan. The Archaeological Inventory Survey and the State Historic Preservation Division's acceptance letter are attached as Exhibit 10. As part of the above efforts, Chapter 6E, Hawai‘i Revised Statutes (HRS) and Section 106 consultation under the National Historic Preservation Act (NHPA) between the Hawai‘i State Historic Preservation Division and Hawai‘i Public Housing Authority were initiated. A Cultural Impact Assessment was also completed for the proposed project and is attached as Exhibit 11. According to the information provided by former and current residents of MWH, a potential cultural impact from the project may result from the inability of different ethnic groups to participate in culturally important activities, which they are currently restricted from as well. These impacts include, but are not limited to, the ability for groups to hold and participate in culturally significant gatherings and festivals, growing traditional crops and other foods for their own use, and engaging in any customary outdoor activities that require access to open space. The Cultural Impact Assessment concluded that the extensive cultural information gathered for the MWH warrants recommendations for cultural and community elements of the redevelopment project. The following recommendations for the redevelopment of MWH are based on information from formal interviews conducted

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		for the Cultural Impact Assessment as well as previous oral-history projects: • Include places where the tenants can plant small gardens in order to live in the Hawaiian lifestyle they grew up with, and to be allowed to grow culturally-significant plants such as ti leaf and others (e.g., bananas, papaya, ginger, plumeria, etc.). • Include a funding stream whereby community programs, events and activities are designed and implemented that bring people of different ethnic/cultural groups together, and that provide safe and healthy activities for kids and teens. These programs, events and activities could include traditional and customary (cultural) practices that highlight the different groups that call MWH their home. The idea here is to help build community. • Develop a community-based garden program at the redeveloped MWH property so that residents can benefit from the raising and eating of fresh food. Well into the 20th century, major portions of the MWH property were still being used to grow food, including taro and other crops. Historic maps from as late as the 1920s show this continuing pattern of land use. Therefore, this recommendation about starting a community garden project or program would be consistent with the history of this place. The proposed conceptual plan includes a mix of community spaces where people can gather, recreate, and celebrate. At the heart of the plan is a park with a community center and a

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		multipurpose hale where community activities can be held as well as informal gatherings for family and friends. In addition, the initial landscape concept incorporates several community gardens and raised food gardens throughout the site where future residents can grow their own food. Culturally significant plants and lei plants will also be considered in the landscape design of the project so the plantings can serve multiple purposes of being useful as well as providing shade, comfort, and aesthetics. MWH Partners, LLC are also committed to providing onsite community and social services to support future residents as well as partnering with neighboring service providers to complement the services already available in the larger community. These may include and are not limited to childcare and afterschool activities, education and job training, elder care and support, food distribution and summer meals, and resident associations. Also, community festivals and celebrations may be held to commemorate the holidays and provide opportunities where the different ethnic groups can share their cultural traditions with other residents in the community. In July 2018, the Hawai‘i Public Housing Authority and MWH Partners, LLC prepared and delivered over 100 letters of invitation and accompanying background materials describing the proposed undertaking and its potential to affect historic properties to organizations and individuals with a potential interest in the proposed undertaking and its potential to affect historic properties. This invitation was sent to all

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		Native Hawaiian Organizations identified on the *Native Hawaiian Organization Notification List* published by the U.S. Department of the Interior, and maintained by the Office of Native Hawaiian Relations, to identify any Native Hawaiian Organizations and/or Native Hawaiian descendants who may have ancestral lineal or cultural ties, knowledge, or religious attachment or concerns regarding the proposed undertaking. The letter and related materials including the distribution list are attached as Exhibit 12. Three parties responded to the invitation and, of these, only the Historic Hawaii Foundation, a Hawaii nonprofit corporation, expressed a desire to participate in consultation as a consulting party. In accordance with 36 CFR § 800.6(a)(1), the Hawai‘i Public Housing Authority also notified The Advisory Council on Historic Preservation (ACHP) of the adverse effect determination and sent a completed e106 form and related submittals. The ACHP confirmed receipt of the e106 submittal on October 9, 2018. On October 25, 2018, the ACHP sent a letter to the Hawai‘i Public Housing Authority stating that based on the information submitted, they concluded that *Criteria for Council Involvement in Reviewing Individual Section 106 Cases*, of their regulations, “Protection of Historic Properties” (36 CFR §800), did not apply to this undertaking. Accordingly, they did not believe their participation in the consultation to resolve adverse effects was needed. This letter is attached as Exhbit 13. A memorandum of agreement (MOA) was executed by the Responsible Entity, the Hawai‘i

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		Public Housing Authority, the State Historic Preservation Division, MWH Partners LLC, and the consulting party, the Historic Hawaii Foundation, on November 13, 2019 stipulating the actions required to mitigate the adverse effect of the proposed undertaking. In summary, the agreed upon mitigation includes: • Documentation of the Mayor Wright Homes Complex in compliance with National Park Service standards prior to demolition and submittal of National Park Services-approved documentation to the State Historic Preservation Division. Once approved by the State Historic Preservation Division, recordation is required at the Hawai‘i State Archives, University of Hawai‘i at Mānoa, and other local repositories; • Project design review by the State Historic Preservation Division and the Historic Hawaii Foundation at the schematic design and design development stages of the project to minimize or mitigate potential adverse effect to directly adjacent eligible historic properties; • Documentary film production for educational purposes of the redevelopment effort and exploration and celebration of the unique history of MWH including a minimum of two oral histories of current or former residents; • Community education including interpretive materials on the Liliha/Pālama neighborhood, Native Hawaiian history of the area, summary of the historic aspects of MWH and its significance as public housing, identification of other eligible historic sites in the Liliha/Pālama

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		neighborhood, and installation of at least five interpretive signs/displays by the time of occupancy of Phase 1 of the project; • Project construction mitigation including historic architectural pre-construction inspection surveys and noise and vibration controls including proper construction machinery use and maintenance; • Archaeological monitoring in accordance with a State Historic Preservation Division-approved archaeological monitoring plan; • Procedures requiring work to cease should additional archaeological or human remains be found during construction and proper notification and documentation occur per State and federal requirements; and • Annual summary written report submitted to all parties of the MOA detailing the work undertaken, scheduling changes that may materially affect the project timeline, and any problems encountered. Meetings will be held as necessary to resolve any issues. Although not specifically stipulated in the MOA, all building permits will also be routed to the State Department of Land and Natural Resources Historic Preservation Division for review. The MOA is attached as Exhibit 14.

ATTACHMENT 5

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
Noise Abatement and Control Noise Control Act of 1972, as amended by the Quiet Communities Act of 1978; 24 CFR Part 51 Subpart B	Yes ☒ No ☐	A Noise and Vibration Study was conducted for the MWH by Terry A. Hayes Associates, Inc. in July of 2017 to comply with applicable federal, State, and local regulations for noise and vibration. The following is a summary of the noise analysis; the entire report is attached in Exhibit 15. Current sources of noise in the vicinity of the MWH include nearby roadways and the H-1 Freeway. Additional sources may include surrounding land uses such as churches, schools, a recycling facility, and a service station as well as nearby apartments across Pua Lane and Kanoa Street. The project site is located over five miles from Hickam Air Force Base and over three miles from the Daniel K. Inouye International Airport. Existing noise levels are analyzed by the Day-Night Noise Level (Ldn), or the average noise over a 24-hour period. Noise levels were monitored at four on-site points along the project boundaries that included North Vineyard Boulevard, Liliha Street, Pua Lane, and North King Street. The on-site monitoring locations showed Ldn measurements ranging from 54.7 dBA to 67.8 dBA for the different points of measurement, with an average 24-hour Ldn of 64.0 dBA for the entire project site. **Construction Activities.** Construction activities for the redevelopment are expected to have temporary increases in ambient noise levels in the project area on an intermittent basis. Noise levels would fluctuate depending on the construction phase and type of construction activity (e.g. demolition, site preparation, pile driving, if necessary, etc.), equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		and require mitigation. Construction noise levels in the vicinity of the project site would exceed the allowable noise levels listed by the State Department of Health Noise Reference Manual Oahu Edition for local levels as well as the allowable noise levels listed by the HAR for state-wide levels. Construction activity would typically only occur from 7:00 a.m. to 6:00 p.m., Monday through Friday and 9:00 a.m. to 6:00 p.m. on Saturdays, Sundays, and holidays, which would help to minimize potential adverse effects to residents and neighboring properties from construction noise and vibration. In addition, to minimize the potential adverse effects related to construction noise, the following is recommended: • The project applicant shall obtain a noise permit associated with exceeding a noise level of 78 dBA Leq as discussed in the Noise Reference Manual O‘ahu Edition. • The project applicant shall obtain a noise permit associated with exceeding the maximum permissible noise levels discussed in the Hawai‘i Administrative Rules. • The construction contractor shall use specialty equipment with enclosed engines and/or high-performance mufflers. • The construction contractor shall locate equipment and staging areas as far from noise-sensitive receivers as practicable. • The construction contractor shall limit unnecessary idling of equipment. • The construction contractor shall install temporary noise barriers to enclose stationary noise sources, such as compressors, generators, laydown and staging areas, and other noisy equipment.

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		• Prior to the commencement of construction activities, notification shall be provided to the on-site residential uses that discloses the construction schedule, including the various types of activities and equipment that would be occurring throughout the duration of the construction period. • A "noise disturbance coordinator" shall be established. The noise disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The noise disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable measures such that the complaint is resolved. All notices that are posted at the construction site shall list the telephone number for the noise disturbance coordinator. **Operational Activities.** Noise generated from project operation once construction is complete will be primarily due to traffic. The project's contribution to mobile noise sources were calculated for 50 percent build out and full build-out. The proposed project's contribution to mobile source noise levels would be less than 3 dBA for both study periods and would not result in an adverse effect related to increasing noise levels at on-site or off-site sensitive receptors. Stationary noise generated at the site would primarily be generated from the operation of ventilation and air conditioning systems. Although the precise locations of these systems are unknown until detailed site plans are created, the described stationary noise sources may

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		potentially exceed the maximum permissible sound levels as detailed in the HAR. Therefore, mitigation will include requiring enclosures for mechanical equipment, such that noise levels do not exceed the maximum permissible noise levels listed in the Hawai‘i Administrative Rules. In addition to noise generated by the proposed project, the Honolulu Authority for Rapid Transportation rail system is anticipated to be operational in the year 2025 and will operate approximately 660 feet to the southwest of the project site along Dillingham Boulevard and Ka‘a‘ahi Street. The Federal Transit Administration has stated that light rail transit projects have no potential to impact sensitive land uses and distances greater than 350 feet away and therefore noise from the future rail operations are not anticipated to adversely impact the MWH Redevelopment project. The State Department of Transportation noted that the project site is located approximately 2.6 miles from the end of runway 26R of the Daniel K. Inouye International Airport (HNL) and is therefore within the 55-60 day-night average sound level (DNL) contour of the 2008 (Forecast) Five-Year Noise Exposure Map. The Federal Aviation Administration (FAA) has published land use compatibility guidelines that can be used to assess potential noise impacts to new development projects. The guidelines indicate that residential land uses exposed to aircraft-related noise levels of less than 65 dBA Ldn are compatible with the ambient noise environment. The current HNL noise contours indicate that the project site is located in a compatible noise environment related to aircraft activities and although single event noise from aircraft operations exceeding 65 DNL may be audible at the project site, depending on multiple

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
		variables, including time of day and type of plane, single event noise levels as measured at the site were not found to be excessive during day or night time periods. In addition, it is anticipated that interior noise levels would be consistent with applicable HUD standards for new residential development and would therefore help mitigate any single event noise generated by aircraft activities.

ATTACHMENT 6

Environmental Assessment Factors [24 CFR 58.40; Ref. 40 CFR 1508.8 &1508.27] Recorded below is the qualitative and quantitative significance of the effects of the proposal on the character, features and resources of the project area. Each factor has been evaluated and documented, as appropriate and in proportion to its relevance to the proposed action. Verifiable source documentation has been provided and described in support of each determination, as appropriate. Credible, traceable and supportive source documentation for each authority has been provided. Where applicable, the necessary reviews or consultations have been completed and applicable permits of approvals have been obtained or noted. Citations, dates/names/titles of contacts, and page references are clear. Additional documentation is attached, as appropriate. **All conditions, attenuation or mitigation measures have been clearly identified.**

Impact Codes: Use an impact code from the following list to make the determination of impact for each factor.
(1) Minor beneficial impact
(2) No impact anticipated
(3) Minor Adverse Impact – May require mitigation
(4) Significant or potentially significant impact requiring avoidance or modification which may require an Environmental Impact Statement

Environmental Assessment Factor	Impact Code	Impact Evaluation
LAND DEVELOPMENT		
Conformance with Plans/Compatible Land Use and Zoning/Scale and Urban Design	3	State Land Use Designation: *Urban* City and County of Honolulu General Plan Development Pattern: *Supportive and Consistent* City and County of Honolulu Primary Urban Center Development Plan Land Use Designation: *Medium and Higher-Density Residential/Mixed Use* and *District Commercial* City and County of Honolulu Zoning Designation: *Medium Density Apartment (A-2)* City and County of Honolulu Downtown Neighborhood Transit-Oriented Development (TOD) Plan: *Urban Mixed Use-Medium* and *Medium Density Residential* *Permitted Floor Area Ratio (FAR): 7.5* *Permitted Building Heights: 400'* The State's "Urban" land use district is described as generally including, "lands characterized by 'city-like' concentrations of people, structures and services. This District also includes vacant areas for future development." The project is considered compatible and in conformance with the State's "Urban" designation. (See Figure 21.)

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Figure 23 illustrates the desired overall development pattern for the island of Oʻahu with the highest concentration of people targeted for the PUC. The proposed project is located in the heart of the urban core of Honolulu. Thus, the MWH Redevelopment is consistent with the pattern of population distribution sought by the City & County of Honolulu's General Plan. The City and County of Honolulu's Development Plans (DPs) represent eight geographic regions that include all areas of Oʻahu. Kalihi-Pālama is located in the Primary Urban Center Development Plan. The proposed project is consistent with its designation as Medium and Higher-Density Residential/Mixed Use with the corner of Liliha and North King Streets designated as District Commercial. See Figure 24. The proposed MWH Redevelopment is also consistent with the Primary Urban Center Development Plan's policies for cultivating livable in-town neighborhoods. The MWH Redevelopment will provide a convenient and efficient mix of residential, commercial, recreational and community uses, with 2,448 residential units, up to 80,000 square feet of commercial and community services, parks and recreational facilities, all within walking distance from the future Iwilei transit station. The site is currently zoned Medium Density Apartment (A-2), intended primarily for concentrated urban areas where public services are centrally located, and infrastructure capacities are adequate. The A-2 zoning permits a maximum floor area ratio (FAR) of 1.9 and a height limit of 150 feet. See Figure 25. The proposed MWH Redevelopment is not consistent with the A-2 FAR and building height requirements. However, the project is consistent with the City and County of Honolulu's (City) adopted Downtown Neighborhood TOD Plan (TOD Plan), which permits a maximum building height of 400 feet and FAR up to 7.5 on the current site (see Figure 27 and Figure). The TOD Plan Land Use Map also designates property along Liliha Street and North Vineyard Boulevard as "Urban Mixed Use-Medium," and a portion along North King Street and in the interior of the property as "Medium Density Residential (Figure 26)." The proposed MWH Redevelopment project is consistent with the Downtown Neighborhood TOD Plan's vision to transform the Iwilei area around the future rail station into "a new high-intensity mixed-use Iwilei district as an extension of Downtown." It is also consistent with the TOD Plan's desired implementation action of increasing the development of affordable housing on public lands (Dyett and Bhatia, 2017). The Honolulu City Council adopted the August 2017 version of the Downtown Neighborhood TOD Plan on September 6, 2017 as City Council Resolution No. 16-247,

Environmental Assessment Factor	Impact Code	Impact Evaluation
		CD1, FD1. A 201H Housing Program exemption for the existing zoning will be sought from the City to allow the project to be developed under the City's adopted TOD Plan recommendations for FAR and building height limits. The project team expects to submit the 201H applicatiom to the City Spring 2020. **Viewplanes.** The site affords mauka (mountain) views of upper Liliha, Nu'uanu Valley and the Ko'olau Mountain Range in the distance. The best mauka views can be experienced from the Liliha Street view corridor, directly adjacent and to the property. Mauka views directly adjacent to the property are urban in nature and include views of North Vineyard Boulevard, abutted by low to mid-rise commercial and multi-family residential buildings, and Pālama Settlement to the northeast. Views looking northwest from the property include Pua Lane, a two-lane roadway with on-street parking, abutted by single and multi-family residential buildings, parking lots, and commercial land uses. Views looking makai/southwest of the property include low-rise buildings (up to four stories) which front North King Street, views of the commercial land uses, and car dealerships near the Liliha Street/North King Street intersection. Views looking southeast include a row of monkey pod trees and grass on the Diamond Head side of Liliha Street and Kukui Gardens, a multi-family residential complex. Some of the taller buildings in downtown Honolulu are also visible to the east of the property, past the buildings of Kukui Gardens. The location of the future rail line will be located makai of the project site as well as the Iwilei Station. The transit line will be elevated above grade and will likely be visible makai of the project site once it is built. The architectural reconnaissance level survey (Exhibit 9) undertaken for buildings within the MWH Redevelopment and the surrounding areas notes five historic properties were found on the same block as the MWH property as potential buildings for listing in the Hawai'i and National Registers (Figure 18). Other properties eligible for listing were identified directly across the street from MWH Redevelopment on North Vineyard Boulevard, Pua Lane and North King Street. The proposed project as currently conceptualized includes four towers with adjoining lower-(four to six stories) and mid-rise podiums (up to ten stories). The MWH Redevelopment may impact distant panoramic views of natural landmarks such as Lē'ahi Crater, Pūowaina Crater, Āliamanu Crater, and the Ko'olau Mountain Range from certain viewpoints. However, the visual impacts from the project must take into consideration the existing highly urban nature of this area and viewshed with taller buildings in Downtown Honolulu and surrounding areas extending up to about 430 feet in height. Closer to the project, the impact to

Environmental Assessment Factor	Impact Code	Impact Evaluation
		mauka-makai views from Sand Island and other viewpoints should also take into consideration the urban context surrounding the property. Residential towers in the vicinity of the project area, on Liliha Street and A‘ala Street range in height from 15 to 23 stories. While views to specific landmarks from various viewpoints in the area may be altered by the proposed project, the overall urban character of this viewshed will not be significantly altered. Visual impacts from the project must take into consideration the highly urban nature of this viewshed with buildings in Downtown Honolulu extending up to about 430 feet in height. While views to specific landmarks from various viewpoints within the Primary Urban Center may be altered by the proposed project, the overall urban character of this viewshed will not be significantly altered. The plan attempts to mitigate visual impacts by: • Providing fewer towers with low- and mid-rise buildings comprising most of the street-facing building massing and space between the towers to preserve distant views where possible; • Activating the street level views with landscaping and pedestrian-friendly streetscapes, commercial uses and lower- and mid-rise residential buildings wherever possible; • Creating a more interesting skyline by varying building heights; • Setting the towers 50 feet back from Pua Lane and Liliha Streets to minimize their visual impacts from the street level of adjacent neighborhoods; and • Orienting the towers with their narrower sides facing the mauka and makai sides of the site and their wider side facing east and west to preserve mauka to makai views. Further, the community vision and guiding principles, which provide the foundation of the Downtown Neighborhood TOD Plan, is for Downtown Honolulu to “…continue to be the region’s premier employment center with substantial resident population and easy access to stores and everyday amenities.” The community vision calls for “a new high-intensity mixed-use Iwilei district as an extension of Downtown” to create a new image for Downtown Honolulu. The Overall Concept described in the TOD Plan, states: “The most transformative vision for TOD in the Downtown neighborhood is a new high-intensity mixed-use Iwilei district. This new full-service neighborhood, with residences, public facilities and neighborhood shopping services, serves as an extension of Downtown and Kalihi. It creates an

Environmental Assessment Factor	Impact Code	Impact Evaluation
		opportunity for new housing within walking distance of Chinatown and Downtown." The plan also noted that the tallest heights and highest intensities are anticipated around the Iwilei Station and mauka of the Downtown Station. The adopted Downtown Neighborhood TOD Plan allows an FAR up to 7.5 and maximum building heights of 400 feet for the project site. Therefore, the proposed conceptualization of the MWH Redevelopment project is consistent with what is permitted for the site under the TOD Plan.
Soil Suitability/ Slope/Erosion/ Drainage/Storm Water Runoff	2	The site is an existing urbanized area. The site is relatively flat, sloping gently from ~27 feet above mean sea level along North Vineyard Boulevard to roughly nine feet above mean sea level along North King Street with an average slope of 2 percent across the property. More detailed drainage analysis will be completed to assess the existing offsite drainage system and proposed improvements, also considering the effects of sea level rise on the project's drainage system using the best available science and standards as detailed design is developed. However, the design will retain the net increase in runoff due to the project onsite in order to minimize impacts to adjacent facilities and potential impacts to surface waters and adhere to all requirements of the City's newly adopted "Rules Relating to Water Quality," which went into effect on August 16, 2017. This project is categorized as Priority A under these rules. The proposed project will also implement low impact development design wherever feasible. The implementation of best practices for erosion control during construction and sewer connection to the municipal wastewater system will mitigate potential impacts to surface waters at the site or secondary impacts to downstream coastal resources. The proposed project will be designed to direct onsite storm water runoff away from the buildings and structures toward open grassed or catchment basins. Establishment of permanent landscaping will serve as long-term erosion control for unpaved areas with rainwater catchment proposed for onsite stormwater control. Rainwater will be reused onsite to the maximum extent possible. A National Pollutant Discharge Elimination System permit for Storm Water Associated with Construction Activity will be necessary since the entire site will be developed and it is roughly 14.8 acres in size and each development phase is anticipated to exceed an acre. The USDA NRCS Soil Survey classifies the majority of the site as primarily 'ewa silty clay loam, moderately shallow, 0-2% slopes. This soil is characterized by very slow runoff and no more

Environmental Assessment Factor	Impact Code	Impact Evaluation
		than a slight erosion hazard. Depth to coral or limestone is 20 to 50 inches. Shrink-swell potential is moderate and corrosivity to steel and concrete is low. Less than one percent of the parcel area contains Kaena clay, 2–6% slopes, located at the farthest north-east corner of the parcel. Runoff is slow and the erosion hazard is slight. This soil has a high shrink-swell potential and its corrosivity to steel and concrete are low. Data and information can be found in Figure 9, Exhibit 8 or at http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx
Hazards and Nuisances including Site Safety and Noise	3	**Noise and Vibration.** A Noise and Vibration Study was conducted for the proposed project by Terry A. Hayes Associates, Inc. in July of 2017 to comply with applicable federal, State, and local regulations for noise and vibration. The following is a summary of the analysis; the entire report is attached in Exhibit 15. Although the proposed project will be 2,448 units, the noise study rounded up to the nearest order-of-magnitude of 2,500 units to conservatively provide analyses of maximum impact. Construction activities for the redevelopment are expected to have temporary increases in ambient noise levels in the project area on an intermittent basis. Noise levels would fluctuate depending on the construction phase and type of construction activity (e.g. demolition, site preparation, pile driving, if necessary, etc.), equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers and require mitigation. Construction noise levels in the vicinity of the project site would exceed the allowable noise levels listed by the State Department of Health *Noise Reference Manual Oahu Edition* for local levels as well as the allowable noise levels listed by the HAR for state-wide levels and will require a Noise Permit from the State Department of Health. Construction activity would typically only occur from 7:00 a.m. to 6:00 p.m., Monday through Friday and 9:00 a.m. to 6:00 p.m. on Saturdays, Sundays, and holidays, which would help to minimize potential adverse effects to residents and neighboring properties from construction noise and vibration. In addition, to minimize the potential adverse effects related to construction noise, the following is recommended: • The project applicant shall obtain a noise permit associated with exceeding a noise level of 78 dBA Leq as discussed in the Noise Reference Manual O‘ahu Edition. • The project applicant shall obtain a noise permit associated with exceeding the maximum permissible noise levels discussed in the Hawai‘i Administrative Rules.

Environmental Assessment Factor	Impact Code	Impact Evaluation
		• The construction contractor shall use specialty equipment with enclosed engines and/or high-performance mufflers. • The construction contractor shall locate equipment and staging areas as far from noise-sensitive receivers as practicable. • The construction contractor shall limit unnecessary idling of equipment. • The construction contractor shall install temporary noise barriers to enclose stationary noise sources, such as compressors, generators, laydown and staging areas, and other noisy equipment. • Prior to the commencement of construction activities, notification shall be provided to the on-site residential uses that discloses the construction schedule, including the various types of activities and equipment that would be occurring throughout the duration of the construction period. • A "noise disturbance coordinator" shall be established. The noise disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The noise disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable measures such that the complaint is resolved. All notices that are posted at the construction site shall list the telephone number for the noise disturbance coordinator. Noise generated from project operation once construction is complete will be primarily due to traffic. The project's contribution to mobile noise sources were calculated for 50 percent build out and full build-out. The proposed project's contribution to mobile source noise levels would be less than 3 dBA for both study points and would not result in an adverse effect related to increasing noise levels at on-site or off-site sensitive receptors. In addition to traffic noise, the Honolulu Authority for Rapid Transportation is anticipated to be operational in the year 2025 and will operate approximately 660 feet to the southwest of the project site along Dillingham Boulevard and Kaʻaʻahi Street. The Federal Transit Administration has stated that light rail transit projects have no potential to impact sensitive land uses and distances greater than 350 feet away and therefore noise from the future rail operations are not anticipated to adversely impact the MWH Redevelopment project, which is about a third of a mile from the future Iwilei rail station and guideway.

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Stationary noise generated at the site would primarily be generated from the operation of ventilation and air conditioning systems. Although the precise locations of these systems are unknown until detailed site plans are created, the described stationary noise sources may potentially exceed the maximum permissible sound levels as detailed in the HAR. Therefore, mitigation will include requiring enclosures for mechanical equipment, such that noise levels do not exceed the maximum permissible noise levels listed in the Hawai‘i Administrative Rules. Temporary vibration impacts will occur during construction. Construction activity can result in varying degrees of ground vibration based on the equipment and methods used for construction. Several buildings about the project site and several potentially sensitive buildings near the site were identified. Site visits performed by Terry A. Hayes Associates suggest that the majority of these buildings were constructed using engineered concrete and masonry. Federal guidance indicates that such buildings can withstand up to 0.3 inches per second without experiencing damage. The use of construction equipment that would produce high levels of vibration, such as large bulldozers, jack hammers, and load trucks, could exceed this criterion if occurring within 11 feet of the buildings. However, the neighboring Fujii Store and Tenement Houses would be held to the vibration standard for historic resources, which federal guidance indicates that such buildings can withstand up to 0.12 inches per second without experiencing damage. Vibration levels from construction equipment such as a large bulldozer would be 0.0039 at 200 feet and there is no potential for vibration to damage to historic structures located at a distance of 22 feet or greater. However, the Fujii Store and Tenement Houses are adjacent to the project site and could experience vibrations levels above the 0.12 inches per second threshold and therefore require additional mitigation as noted below. In order to mitigate construction-related vibration impacts, construction activity should typically only occur from 7:00 a.m. to 6:00 p.m., Monday through Friday and 9:00 a.m. to 6:00 p.m. on Saturdays, Sundays, and holidays. In addition, to help minimize potential adverse effects associated with damage to adjacent buildings, mitigation measures for construction vibration will include the following for the sensitive structures located close to proposed construction activities: • Prior to issuance of a grading/shoring permit, a qualified structural engineer shall survey the existing foundation and structural integrity of off-site buildings that will be located within 11 feet of large bulldozers and similar vibration-

Environmental Assessment Factor	Impact Code	Impact Evaluation
		generating equipment and at the Fujii Store and Tenement Houses. The survey shall be submitted to the appropriate mitigation monitor. At the conclusion of vibration causing activities, the qualified structural engineer shall issue a follow-on letter describing damage, if any, to the adjacent buildings. The letter shall identify recommendations for any repair and certify the completion of any repairs as necessary to confirm the integrity of the foundation and structure of the adjacent buildings. • If the construction plans call for high-vibration construction activities being performed close to structures, the contractor may be required to use alternative procedures that produce lower vibration levels. Examples of high-vibration construction activities include the use of pavement breakers, vibratory compaction, and hoe rams next to sensitive buildings. Alternative procedures shall include the use of non-vibratory compaction in limited areas and concrete saws in place of jackhammers or pavement breakers for demolition. • If piles are required to support new structures, pile driving shall be prohibited in places of cast-in-drilled-hole (CIDH) piles or caissons. There are also several historic structures near the project site, including the Pālama Theater located approximately 200 feet to the west, Kaumakapili Church located approximately 420 feet to the northwest, Tamashiro Market located approximately 690 feet to the northwest, and O‘ahu Railway and Land Company Depot – Honolulu Station located approximately 800 feet to the southwest. Federal guidance indicates that such buildings can withstand up to 0.12 inches per second without experiencing damage. Vibration levels from construction equipment such as a large bulldozer would be 0.0039 at 200 feet and there is no potential for vibration to damage to historic structures located at a distance of 22 feet or greater. During ongoing operations once construction is complete, the proposed project would not include significant stationary sources of ground-borne vibration. Operational ground-borne vibration in the project vicinity would be generated by vehicular travel on the local roadways. However, similar to existing conditions, project-related traffic vibration levels would not be perceptible outside the roadway right-of-way. Therefore, the proposed project would not result in adverse effect related to the operational vibration. **Fugitive Dust and Emissions.** An air quality study was conducted for the proposed project by Terry A. Hayes Associates, Inc. in July of 2017. The following is a summary of the analysis; the entire report is attached in Exhibit 20.

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Prior to construction of the proposed project, existing structures on the project site would be demolished and the associated materials would be removed. The existing structures on the project site contain lead-based paint and asbestos, and all demolition projects within the State of Hawai‘i must notify the Department of Health Asbestos Abatement Office of the Noise, Radiation and Indoor Air Quality Branch prior to commencement of activities. Accordingly, demolition activities associated with the proposed project would be subject to the requirements of Title 11 Hawai‘i Administrative Rules (HAR), DOH, Chapter 501, “Asbestos Requirements.” The proposed project would complete an Asbestos Renovation/Demolition Survey to determine the potential for the presence of asbestos-containing materials. Additionally, all demolition and construction activities would adhere to the provisions of the State Department of Health Construction and Demolition Waste Disposal General Guidance to ensure proper handling of potentially contaminated materials. Construction activity would generate emissions through the use of heavy-duty construction equipment and through vehicle trips generated by construction workers traveling to and from the project site. Fugitive dust emissions would primarily result from demolition and site preparation (e.g., grading) activities. Nitrogen oxide emissions would primarily result from the use of construction equipment. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions. Construction activity would occur over the entire 14.8-acre project site. A project site of this size would typically require an equipment inventory including a maximum of two scrapers and two graders to level the surface. This equipment inventory would potentially disturb up to three acres of the project site on a given day. Using USEPA AP-42 emission factors, it was determined that construction activity would generate up to ten pounds per day of fugitive dust emissions. Construction emissions would be temporary and are not considered adverse. The project will not result in adverse effects related to air quality; however, demolition and construction activity may result in temporary emissions from vehicle exhaust and fugitive dust emissions from ground disturbance. All activities will comply with the relevant provisions of Section 11-60.1-33, HAR, on fugitive dust. Therefore, the following control measures are recommended to reduce fugitive dust emissions:

Environmental Assessment Factor	Impact Code	Impact Evaluation
		• The construction contractor shall use water or suitable chemicals to control fugitive dust in the demolition of any existing buildings or structures, construction operations, the grading of roads, or the clearing of land. • The construction contractor shall apply asphalt, water, or suitable chemicals on roads, material stockpiles, and other surfaces which may result in fugitive dust. Ensure an adequate water source exists at the site prior to start-up of construction activities. • The construction contractor shall cover all moving, open-bodied trucks transporting materials which may result in fugitive dust. • The construction contractor shall maintain roadways in a clean manner. • The construction contractor shall promptly remove earth or other materials from paved streets which have been transported there by trucking, earth-moving equipment, erosion, or other means. The following control measures are recommended to reduce pollutant exposure to residences during the construction activities: • Staging areas shall be located away from on-site residential land uses to create a buffer and alleviate potential nuisance problems. • On-site electricity shall be obtained from the electrical grid rather than temporary diesel or gasoline generators. • Equipment and vehicle engines shall be maintained in good condition and in proper tune per manufacturers' specifications. • All construction equipment and delivery vehicles shall be turned off when not in use or prohibit idling in excess of five minutes. Haul trucks in particular that stage waiting to be called to remove dirt from the site shall not be allowed to idle while queuing. • Additional care should be taken by contractors to minimize fugitive dust from materials being hauled to or away from the project site and mud and debris tracked onto adjacent roadways. • Contractors should also develop a dust control management plan for the different phases of construction, focusing on minimizing the amount of dust-generating materials and activities, centralizing on-site vehicular traffic routes, and locating potential dust-generating equipment in areas of the least impact. • Provide adequate dust control measures during weekends, after hours, and prior to daily start-up of construction activities.

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Once construction is completed, the proposed project also does not include a source of direct pollutant emissions. However, indirect sources of emissions include off-site electrical generation activities (for those that are non-renewable) and tailpipe emissions from on-road vehicles and the potential air quality impacts related to the proposed project is therefore analyzed on those sources. Based on the multimodal transportation assessment completed for the proposed project and attached as Exhibit 21, full buildout, which accounted for maximum impact rounding up the potential number of units to 2,500, would introduce approximately 10,085 new daily trips to the project area, including 578 trips during the AM peak hour and 959 trips during the PM peak hour. The maximum peak hour intersection volume in 2028 following full buildout would be approximately 5,069 vehicles at the intersection of North King Street, Dillingham Boulevard, and Liliha Street. Based on carbon monoxide (CO) dispersing models developed to analyze traffic-related impacts, it is projected that the roughly 5,000 vehicles would generate a maximum 1-hour CO concentration of approximately 2.3 ppm. The applicable State 1-hour average CO ambient air quality standard is 9.0 ppm. Therefore, the maximum intersection volume in the project area following full buildout of the proposed project is well below the volume that could potentially exceed the State 1-hour standard for CO. Additionally, the maximum background 1-hour CO concentration measured in the vicinity of the project area was 1.4 ppm in 2015, which is approximately one-sixth of the applicable State 1-hour standard for CO. According to the multimodal transportation assessment, the maximum existing peak hour intersection volume in the project area is 4,439 at the intersection of North King Street, Dillingham Boulevard, and Liliha Street. Under the 2028 full buildout conditions, peak hour volumes at this intersection would be 5,039 vehicles, which represent an increase of approximately 14 percent relative to existing conditions. This incremental increase in maximum peak hour traffic volumes would not have the potential to increase maximum 1-hour CO concentrations in the project area to exceed state standards. Therefore, implementation of the proposed project would not result in potential CO hot spots within the project area. The proposed project would result in indirect greenhouse gas emissions through electricity generation at an off-site facility. The project will require a maximum of 9.7 megawatts of power which would lead to indirect generation of greenhouse gas emissions. Hawai‘i is committed to renewable energy production, which does not generate greenhouse gas emissions. In 2016, 25.8 percent of energy produced by the Hawaiian Electric Companies (HECO) was renewable. Hawai‘i has enacted a law that mandates that all

Environmental Assessment Factor	Impact Code	Impact Evaluation
		of the State's electricity comes from renewable sources no later than 2045. As HECO continues to achieve those goals, project-related indirect emissions would proportionally decline until 2045, or when the State achieves a fully renewable supply of energy. Project emissions have been conservatively estimated using existing generation information and emission rates. The 2015 Hawai‘i State Electricity Profile indicates that approximately 1,600 pounds of carbon dioxide is emitted per megawatt-hour of electricity used. The analysis assumes that the average daily power use, including nighttime hours, at the project site would be 50 percent of the maximum power load. The indirect emissions from electricity use would be approximately 11,129 metric tons per year. These emissions would quickly decrease through 2045 as the State becomes fully reliant on renewable energy. Hawaiian Electric has stated there is existing capacity to service the project. The project would not interfere with the development of clean energy supplies and would not include a substantial on-site source of greenhouse gas emissions. The proposed project would locate in-fill development near existing public transportation and shopping areas, thereby reducing mobile source emissions compared to development located outside of urban areas. For example, the trip generation analysis prepared for the proposed project anticipates that walking/biking trips would reduce passenger vehicle trips by 10 percent, residential-related transit trips would reduce passenger vehicle trips by 30 percent, and retail related transit trips would reduce passenger vehicle trips by 15 percent at full buildout. Energy conservation features and in-fill development benefits would ensure that the proposed project would not result in a significant greenhouse gas impact. **Tsunami**. The City and County of Honolulu uses three tsunami evacuation designations. The first is the Tsunami Evacuation Zone where evacuation is required for any tsunami warning. The second is the Extreme Tsunami Evacuation Zone where additional areas must be evacuated only during an extreme tsunami event generated from earthquakes of Magnitude 9+ on the Richter scale. Remaining areas are identified as safe areas that are anticipated to be outside of the inundated areas due tom tsunami events. The property is located outside the Tsunami Evacuation Zone but portions closest to North King Street fall within the Extreme Tsunami Evacuation Zone (Figure 13). The portions of the site located in the Extreme Tsunami Zone will be required to be evacuated to safe areas on the mauka side of the site or further mauka to North Vineyard Boulevard. Mitigation for the project may also include designing the structures to be flood-

Environmental Assessment Factor	Impact Code	Impact Evaluation
		proof particularly on the lower floors and built to resist the effects of a tsunami and storm surges. Essential equipment should also be located on higher floors. Vertical evacuation is recommended for multistory buildings such as condos or hotels with a large concrete frame that is built to seismic standards, particularly those taller than six stories (FEMA, 2009). **Sea Level Rise and Climate Adaptation.** Sea level rise of one meter is not anticipated to have significant, immediate impacts to flooding at the project site. Figure 14 shows the simulated one-meter sea level rise in relation to the project site generated by the National Oceanic and Atmospheric Administration (NOAA) Coastal Storms Program and Dr. Chip Fletcher at the University of Hawai‘i School of Ocean and Earth Science and Technology. However, adaptation and resiliency measures should be considered for improving the safety of future residents and longevity of the proposed facilities, landscaped areas, and essential infrastructure serving the project such as water, sewer, electrical, drainage, and roadways as secondary impacts from global climate change such as extreme weather events or worsening sea level rise may still impact the project. The MWH Redevelopment is most at risk of damage from extreme weather events and the loss of service of critical infrastructure. The project including all structures, landscaping, and vital infrastructure should be designed to withstand water inundation and extreme weather events wherever feasible. Essential equipment will also be located on higher floors wherever feasible. Consideration will also be given to the strategies recommended by the U.S. Army Corps of Engineers such as: • Upgrades and strengthening of existing structures; • Construction of structures to be flood-proof; • Upgrades and modifications of infrastructure (e.g. prevention of backflows to wastewater or drainage utilities caused by inundation of sea water). **Hurricanes.** While hurricanes are relatively rare in Hawai‘i, they do occur and may be increasing in frequency due to global climate change. The Kalihi area, as the rest of the island or state, is no more or less vulnerable to the destructive winds and torrential rains associated with hurricanes. While it is difficult to predict such natural occurrences, it is reasonable to assume that future incidents are likely, given historical events. While hurricane storm damage is difficult to predict, the NOAA Coastal Storms Program and Dr. Kwok Fai Cheung from the University of Hawai‘i at Mānoa School of Ocean and Earth Science and Technology developed computer models to simulate Category 4 hurricane storm surges for both current sea levels and

Environmental Assessment Factor	Impact Code	Impact Evaluation
		with projected one-meter sea level rise. At current sea levels, the storm surge is not projected to impact the project site (Figure 15). However, with one meter of sea level rise, the corner of the property at North King and Liliha Streets may incur up to a half-meter of inundation from a Category 4 hurricane storm surge (Figure 16). Similar to the mitigation measures proposed for the project to withstand extreme weather events generated due to global climate change and sea level rise, the project should be designed to provide a safe environment for future residents and improve longevity and resiliency of the proposed facilities, landscaped areas, and vital infrastructure serving the project such as water, sewer, electrical, drainage, and roadways. It will implement hazard mitigation measures where appropriate, such as hardening of the facility against hurricanes, flooding, and high winds. In the event of a hurricane, the potential impact of destructive winds and torrential rainfall will be mitigated through compliance with the 2006 International Building Code for any new construction. Essential equipment will also be located on higher floors wherever feasible to avoid inundation from storm surges. **Earthquakes.** Most earthquake activity in Hawai‘i is related to volcanic rather than tectonic activity. Thousands of small earthquakes occur in Hawai‘i each year, and moderate and disastrous earthquakes have impacted the islands in the past. The last major earthquake to be felt on O‘ahu was the Honomu Earthquake in 1973, which resulted in minor cosmetic damage to structures, but fortunately did not result in any reported injuries or deaths. Most earthquakes occur on the island of Hawai‘i and are occasionally felt on O‘ahu. Seismic hazards in the area are no greater in the project area than other locations on O‘ahu. The proposed project will be replacing the existing structures with new structures built to current standards in the International Building Code. This is anticipated to improve safety for residents and resiliency of the structures due to potential damage from earthquakes. None of these conditions will require modification of the development of the Project. However, recommendation by the State Department of Health and Civil Defense will be followed in the event that one of these natural events occurs. Variances and permits may be required for construction activities. **Site Safety.** While the proposed project will increase the population within the immediate project area, it is not anticipated to substantially increase regional population as it is anticipated future residents will be relocating from the surrounding Kalihi-

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Pālama neighborhoods or elsewhere on O‘ahu. As a result, existing public services and medical facilities such as police, fire, and emergency medical services may need to shift existing manpower and resources closer to Iwilei as needed to serve the proposed project. During the master plan process, stakeholder meetings were held with various public service agencies including the Honolulu Fire Department. Some of their requested considerations in the design of the proposed redevelopment include: • Elevators that can accommodate a gurney laying down flat to improve response to medical emergencies; • Ensuring internal streets are designed with appropriate turning radii to accommodate their fire trucks and adequate space is provided in front of high rises to accommodate ladder trucks; • Aerial ladder access up to a certain floor level. Additionally, each floor level should have smoke towers, and there should be a command center on a lower floor with an exit to the outside; • Eliminating potential interaction with overhead powerlines especially along the Liliha Street frontage; • Reducing the amount of combustible materials in public spaces; and • Community-wide education and safety programs in multiple languages for residents as well as building managers. Project designers will continue to work closely with City Police, the Honolulu Fire Department, and other public service providers during the detailed design of the facilities to ensure the new structures at MWH will be easily accessible by emergency services to support favorable response times. Onsite fire protection requirements will also be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department . The design of the future facilities must meet Honolulu Fire Department requirements including adherence to the codes and regulations of the National Fire Protection Association and Uniform Fire Code. In addition, the Honolulu Police Department has advised the project team to inform construction workers and employees not to leave any valuables in their vehicles and that all construction equipment and supplies be securely stored when not in use. They also recommended that security controls be provided at the project site to deter criminal activity and assist in the identification of perpetrators. The project development team will work together with the Honolulu Police Department to develop a security plan for the construction of the project and will consider security measures such as security guards and camera surveillance systems

Environmental Assessment Factor	Impact Code	Impact Evaluation
		for non-working hours to secure the site. Site security will also be studied to control access and secure the site during both working and non-working hours. Access controls will be important to keep the pubic off-site during working hours for public safety.
Energy Consumption	2	The total anticipated electrical demand load for the project is 9,688 kVA (9.688 MW or approximately 9.7 MW). The proposed project will be designed to be as energy efficient as possible to reduce electrical demand and include elements such as solar hot water heating, operable windows for natural ventilation, light and motion sensors in non-residential areas, energy efficient lighting, and Energy Star appliances. Onsite renewable energy such as solar photovoltaics (PV) will also be evaluated during the design process and coordinated with HECO if pursued. The PV panels could be installed on the upper parking decks as shade structures and on building rooftops. In terms of distribution or bringing electricity to the project site from HECO's electrical grid, HECO has indicated that they can serve the initial Phase 1 development with the existing distribution circuit on Pua Lane. HECO's will-serve letter is attached as Exhibit 22. However, new 25 kV infrastructure would be required to serve the Phase 2 development and beyond. The probable point of connection is the nearby Iwilei Transmission Substation located along Kuwili Street. As this proposed offsite 25-kV ductline would facilitate the overall TOD development of the larger Iwilei District envisioned by the City, there should also be negotiations between the State and the City for cost sharing of the duct system construction costs. The project will also create a sustainable new community of high-quality design. Hawai‘i is committed to renewable energy production. In 2016, 25.8 percent of energy produced by the Hawaiian Electric Companies was renewable. Hawai‘i has enacted a law that mandates that all of the State's electricity comes from renewable sources no later than 2045. The project is anticipated to be built in 2028. Project-related public utility energy demand would decline between 2028 and 2045 as the State moves toward a fully renewable supply of energy.

Environmental Assessment Factor	Impact Code	Impact Evaluation
SOCIO-ECONOMIC		
Employment and Income Patterns	1	A socio-economic impact study was completed for the proposed project and is attached as Exhibit 23. Within the Kalihi-Pālama region, over 85 percent of jobs fall within four categories: services, industrial, retail, and transportation/utilities (Keyser Marston Associates, Inc., 2011). As of 2013, there were approximately 452,610 jobs in the City and County of Honolulu and the Kalihi region provided a total of 27,950 jobs for Zip Code Tabulation Area 96817. For that same year, the most common businesses in Kalihi were in the health care industry (16%), which accounted for approximately 5,500 jobs, followed by retail (13%). About a quarter of these were employed in establishments with 25 to 49 employees; nearly the same number were in the next two larger classes (50 to 99 and 100 to 249 employees). Three establishments employed 250 or more persons in 2013. Over the ten-year period from 2004 to 2013, the total employment and average annual pay in the Zip Code Tabulation Area have declined. Approximately 39 percent of men and 38 percent of women in Kalihi work in service occupations. According to the 2014 Five-year ACS, median household income for the 96817 Zip Code Tabulation Area in Kalihi was $56,654, which is slightly below that of the City and County of Honolulu as a whole at $57,936. Unemployment in the Kalihi Zip Code Tabulation Area was also relatively low (5.6 percent), which is just below that of the City and County of Honolulu (5.9 percent). However, unemployment among MWH residents was significantly higher at 17.7 percent and MWH residents also experienced a higher incidence of poverty with 56.8 percent of MWH residents below the poverty level for the previous 12 months. The proposed project will generate jobs in three different categories: construction, facility management and maintenance, and commercial jobs. Construction jobs include jobs at offsite construction offices and yards since not all construction jobs are onsite. Construction jobs are estimated on the basis of construction spending. For management and maintenance jobs, estimates include the onsite workforce needed to operate MWH, including contractors who may be present either full-time or at intervals. Social service and commercial jobs onsite are estimated from the proposed 80,000 square feet of commercial space. These jobs will be with establishments and agencies that lease space within MWH. On-site operations employment will grow to approximately 380 new direct jobs by full buildout, more than ten times the number

Environmental Assessment Factor	Impact Code	Impact Evaluation
		currently employed at MWH. The increase in annual wages on-site will be approximately $11.7 million (in constant dollars, controlling for inflation). These jobs and wages are expected to continue for many years. Construction employment will vary from year to year, since the phases of redevelopment involve areas of different sizes. At its peak, construction jobs are estimated to reach 577 direct jobs per year. These jobs, however, are temporary and will end at full project buildout. Total construction wages are projected to range between $9.9 million and $38.9 million per year. Indirect and induced jobs are also expected from the redevelopment and ongoing operations at MWH. These are jobs created by local spending from the expenditure of funds for the redevelopment, such as the purchasing of materials for the project construction or jobs created when new employees spend their wages in the local economy. At project buildout, the induced and indirect number of jobs created by the ongoing operations of redevelopment is estimated at 189 with a total of $9.7 million in wages. During project construction, this estimate is projected to range between 191 to 751 induced and indirect jobs per year, with $9.9 million to $38.9 million in total wages. The project is anticipated to have a beneficial impact on employment and wages throughout the redevelopment process and for permanent operational jobs. Mitigation measures may include job training and encouraging contracting from local area companies and employing onsite and area residents. This will help support local economies and reduce commuting and traffic from other areas.
Demographic Character Changes, Displacement	1	Kalihi is a working-class, multi-ethnic neighborhood that has historically been a first home for many immigrants to Hawai‘i. Since the early twentieth century, it has remained a center for immigrant and labor organizations. According to the 2014 American Community Survey, just over a third (35.3 percent) of Kalihi residents are foreign-born and the ratio is slightly larger (46.6 percent) among the MWH residents. Most residents of MWH identify themselves as full or part Native Hawaiian and Other Pacific Islander (74.1 percent), and 26.0 percent identify themselves as full or part Asian. This differs from the majority of the population within Kalihi, which mostly identifies as Asian alone (64.8 percent), while only 18.4 percent of residents identify as full or part Native Hawaiian and Other Pacific Islander. The proposed project will increase the number and density of residents living at the site. However, all of the existing residents in good standing will have the first right to return to the

Environmental Assessment Factor	Impact Code	Impact Evaluation
		reconstructed MWH community. During the demolition, construction, and transition to the redeveloped MWH community, the primary goal is to minimize offsite relocation of existing MWH residents. The first phase of construction, which is preceded by tenant relocation, is anticipated to occur at the corner of North King and Liliha Streets. It will involve the demolition of the existing units; the number of impacted units which is still to be determined. If there are units available onsite at that time, residents may be given the option to move into those units. However, there will likely not be enough vacant units for all those who must be relocated. With the number of units to be constructed in the first phase, the goal is to return those relocated residents to the new units as soon as possible and to have the residents from the next area of demolition to be able to move directly from their existing units into the new units without having to relocate offsite. For those who must be relocated offsite during the first phase of construction, the development team will be responsible for coordinating placement into temporary or permanent housing. Those tenants will continue to pay the same or similar rents throughout the duration of the offsite relocation. The project is also not anticipated to have a significant impact on overall population of Oʻahu as it is intended to fill the existing housing need for existing residents and not expected to attract new residents to Oʻahu and Hawaiʻi. At the neighborhood level, it is estimated that many of the new MWH residents will come from the surrounding Kalihi-Pālama neighborhood where they are currently living with family and friends, or in less desirable housing. It is also possible that the new MWH residents will be moving from similar situations elsewhere on Oʻahu with the desire to move closer to the urban core of Honolulu to reduce their commute times and be able to walk or bike to work. This would have positive secondary impacts including reducing impacts to regional traffic, vehicle emissions, and fuel consumption, and increasing individual's economic efficiencies by reducing the amount of money spent on transportation and redistributing that spending to other purposes such as housing, childcare, and nutrition. The redistribution of many current Oʻahu residents to the new residences at MWH therefore may have an overall positive impact on the environment and social and financial wellbeing of new residents.

Environmental Assessment Factor	Impact Code	Impact Evaluation
COMMUNITY FACILITIES AND SERVICES		
Educational and Cultural Facilities	3	Students from MWH typically attend McKinley and its feeder schools — Central Middle School, Ka‘iulani Elementary School, Kauluwela Elementary School and Likelike Elementary School. There is only one public middle school and one public high school serving MWH students. However, MWH students of elementary school age are split among the three public elementary schools depending where they live on the property. Princess Victoria Ka‘iulani Elementary School is the closest school to the site, located less than half a mile ‘ewa of MWH on North King Street, and also has the largest percent of MWH students of the three elementary schools. Likelike Elementary School is located less than half a mile mauka of the site and approximately 75 percent of its students live in MWH as well as some staff members. The third elementary school, Kauluwela Elementary School, is located less than a mile mauka (towards the mountains) from MWH. The majority of the students at these public schools reflect the low-income, multi-ethnic character of Kalihi. Compared to the rest of the State, the families that make up these Kalihi area school communities have a higher percentage of Public Assistance Income, children below the poverty level, and children who are “at risk.” On-going discussions with the State Department of Education are being held to determine how the proposed project will support public education. As the project moves into design and construction, MWH Partners will continue discussions with the Hawai‘i Department of Education regarding impacts on student relocation and transition during the carious phases of this project. MWH Partners will coordinate with the Hawai‘i Department of Education to execute an educational contribution agreement to satisfy the State’s school impact fee requirements.
Commercial Facilities	1	Kalihi is located within the urban core of Honolulu, close to the state’s business, financial, government, and commercial center. While Kalihi has a diverse residential history, it also incorporates a truly mixed-use area of commercial activities, including retail, industrial, and manufacturing. Supported by its proximity to Honolulu Harbor and the Daniel K. Inouye International Airport, the mix of existing businesses in Kalihi range from shipping and sheet metal related industries to food production and distribution. Commercial uses makai of Dillingham Boulevard include big box commercial, industrial office space, warehouses, machine shops, and food industries, while the area mauka of Dillingham tends to be mostly residential with smaller commercial lots

Environmental Assessment Factor	Impact Code	Impact Evaluation
		including fast food restaurants, gas stations, banks, and automotive shops. The proposed project includes up to 80,000 SF of retail and commercial space, primarily on the lower floors of the mixed-use buildings. The specific uses are yet to be determined but they provide an opportunity to activate street frontages and encourage pedestrian access between residential and commercial uses. They will not only serve the new residents but complement the diverse commercial uses already in the area and provide additional retail, social services, and job opportunities to a growing and diverse neighborhood. Liliha and North King Streets are prime corridors for future retail and the corner of the two streets has been identified as a potential location for a retail anchor such as a grocer. The building and street frontages in this area will be designed as a major focal point and wayfinding element for the neighborhood. Other commercial uses may locate along Liliha Street and community services may locate along Pua Lane opposite the new Kalihi-Pālama Health Center and at the proposed community center. As the community is built, other locations may also become favorable as market opportunities arise. The MWH Redevelopment is easily accessible to existing employment centers, shopping, and services by public transportation, walking, and private vehicle.
Health Care and Social Services	1	As noted in the attached Human Capital Report (Exhibit 24), the Kalihi area is well-served by a variety of community and social service providers. Hawai‘i Literacy, Pālama Settlement, Salvation Army, YMCA, and the Hawai‘i Food Bank are among the active social service agencies supporting current residents and the Kalihi-Pālama Health Center is currently located across the street on Pua Lane. The proposed project also anticipates having onsite social services and community programs in addition to providing community gathering spaces, community gardens, and the central park and community center. The added support services and nearby existing or developing services are anticipated to improve public health and access to medical and social services for current and future residents. Community well-being and public mental health benefits could also arise from more community activities and social events held onsite, which contributes to more opportunities to meet people from diverse backgrounds and may also stimulate new social networks, build social resilience and understanding, improve community safety, and strengthen relationships between future residents, patrons and visitors, businesses, and social services to the site.
Solid Waste Disposal/Recycling	3	The MWH Redevelopment site is served by adequate and acceptable private trash collection and municipal solid waste

Environmental Assessment Factor	Impact Code	Impact Evaluation
		disposal. On Oʻahu, a waste-to-energy combustor, H-POWER (Honolulu Program of Waste Energy Recovery) located at the Campbell Industrial Park receives all residential and commercial packer truck wastes on the island and incinerates about 1,800 tons of combustible waste per day, or over 700,000 tons of waste annually, producing up to ten percent of Oahu's electricity. The electricity generated is bought by Hawaiian Electric Company. The Waimanalo Gulch Landfill is the City's primary solid waste disposal facility, located mauka of Farrington Highway near Kahe Point. The site accepts residential, commercial and nonhazardous industrial solid wastes, demolition debris and ash and residue from the H-POWER waste-to-energy facility. Wastewater treatment sludge, septic tank wastes and cesspool pumpings are accepted, provided such disposal is in accordance with the landfill's operating guidelines. The site also handles special wastes such as spent lime, contaminated foods and asbestos. PVT Land Company, Ltd. in Nānākuli is the only construction and demolition waste landfill on Oʻahu. They receive asbestos and other contaminated materials but also divert up to 80 percent of the construction and demolition waste it collects (PVT Land Company, Ltd., 2016). There are other companies on island who recycle deconstructed materials in order to divert them from the landfills and others who mitigate hazardous construction waste. Short-term impacts include additional solid waste generated at the site during construction. Waste is expected to consist of materials from demolition, construction, and grading activities. Because of the potential for lead-based paint and asbestos on the existing buildings, the development team will work with the State Department of Health Asbestos Abatement Office of the Noise, Radiation and Indoor Air Quality Branch and special contractors to manage the hazardous materials and to ensure exposure by residents remaining onsite is minimized as detailed above. Best management practices during construction will be implemented including every effort to divert materials that can be reused or recycled from landfills as well as minimizing the amount of waste generated. Solid waste will also be generated by households remaining on the site through the construction process as well as new households once construction is completed. There will also be solid waste generated by the proposed commercial uses and green waste from the landscape maintained onsite. The City estimates that Oahu generates more than 2.2 million tons of waste annually from residential, commercial and industrial sources. About 15 percent of residential trash is recyclable newspaper,

Environmental Assessment Factor	Impact Code	Impact Evaluation
		aluminum, glass and plastic; and 25–30 percent is compostable yard trimmings. Office wastes are estimated to be as much as 85 percent recyclable office paper. In retail operations, cardboard comprises a major proportion of solid wastes. The proposed project will support recycling as much as possible for both households and commercial uses as well as green wastes generated onsite. Detailed design will include but not limited to onsite facilities to support separating wastes into recyclable and non-recyclable materials and for central collection facilities within the buildings. MWH Partners, LLC will also work with the City and contracted collection services to ensure as much recyclable materials are diverted from the waste stream from the project as they will be managing ongoing operations of the site once construction is complete. All remaining non-hazardous waste generated by the project must be disposed of at a solid waste management facility that complies with applicable State regulations. No open burning of wastes either onsite or offsite will be permitted.
Waste Water/ Sanitary Sewers	2	The MWH Redevelopment site is anticipated to be served by adequate and acceptable municipal sanitary sewers, which are in the process of being upgraded by the City and County of Honolulu to meet the requirements of the global consent decree as amended (Civil No. 94-00765DAE-KSC) and entered between the City and County of Honolulu, U.S. Environmental Protection Agency (EPA), and the State of Hawai‘i Department of Health. The Kalihi area is serviced by the Sand Island Wastewater Treatment Plant, which processes approximately 60 percent of Oahu’s wastewater. The Sand Island Wastewater Treatment Plant is designed to process an average of 90 million gallons per day (mgd) and 200 mgd for peak flows during wet weather. It processed an average of approximately 65.26 mgd in 2016. The existing MWH generates an estimated average of 0.09 million gallons per day (mgd) with a maximum (max) design flow of 0.411 mgd and a peak flow of 0.43 mgd. The project's Preliminary Engineering Report conservatively analyzed up to 2,500 residential units and up to 80,000 square feet of retail and commercial space to study the potential maximum impact although the current project is estimated to be 2,448 units. The Preliminary Engineering Report is attached as Exhibit 25 and estimated a net increase in average daily wastewater contribution of approximately 0.52 million gallons per day (mgd), a maximum design contribution of 1.54 mgd and a peak design contribution of 1.54 mgd over existing conditions. The necessary on-site sewer system facilities will be installed to adequately service the development, including gravity sewers

Environmental Assessment Factor	Impact Code	Impact Evaluation
		and related appurtenances. No individual wastewater systems or treatment facilities are proposed as a part of this project. The sewer system will be designed in accordance with applicable Federal, State, and City and County of Honolulu standards. A sewer connection application was submitted to the City on March 6, 2017 for Phase I sewer demand for 650 residential units and up to 80,000 square feet of commercial space and received approval on December 18, 2017. A copy of the approved application is included in Exhibit 25. Based on initial correspondence with the City's Department of Environmental Services, upsizing of existing offsite ten-inch and twelve-inch sewer lines in North King Street is required for the full buildout but not for the initial Phase I increment so the City's existing wastewater system is adequate to serve Phase I of the proposed project. The global consent decree outlined improvements to be implemented by the City including deficiencies at the Awa Street wastewater pump station and School Street, College Walk and Iwilei area sewer lines. The City will be completing the improvements in two phases. Phase 1 of the Awa relief sewer project will be implemented to correct some of the identified deficiencies and must be completed by June 30, 2020 in order to comply with the global consent decree requirements. Phase 2 upgrades to the Awa Street wastewater pump station is not part of the consent decree requirement and has yet to be scheduled by the City. Depending on the timing of the MWH Redevelopment and other projects in the area, completion of both phases of the Awa relief sewer project may be required to serve the full buildout of the proposed project. Therefore, the project team will maintain ongoing coordination with the City in order ensure adequate wastewater service can be provided to the proposed MWH Redevelopment. The City Council also prioritized infrastructure improvements to support the increased density in the area. The recently adopted Downtown Neighborhood TOD Plan identifies the following action item to be completed in the three years following the adoption of the TOD Plan: *"Adopt a financing strategy for a Downtown, Chinatown, and Iwilei Infrastructure Facilities Financing Plan that augments the regional infrastructure planning underway for the Kalihi neighborhood TOD Plan (including strategies for State, City, or constitutional authorization), and establish a 2017-2020 timeline for planning, design, and construction of the first phase of infrastructure upgrades"* (Dyett and Bhatia, 2017).
Water Supply	2	The MWH Redevelopment site is served by adequate and acceptable municipal water supply. The Honolulu Board of

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Water Supply manages, controls, and operates the municipal water system on O‘ahu, which includes potable (drinking water) and fire protection water service to the MWH property. The Honolulu Board of Water Supply Metro 180 system provides water to the existing MWH and serves municipal water systems from Pearl City to East Honolulu. In the vicinity of the site, the Honolulu Board of Water Supply system includes 24-inch and 42-inch transmission mains along North King Street, North Vineyard Boulevard, and Pua Lane. Twelve-inch mains are located along Liliha Street and North Kukui Street. Based on a water availability request for up to 2,500 residential units and 75,000 sf of retail and commercial development, the Honolulu Board of Water Supply responded with a letter dated November 9, 2016 confirming that the existing water systems are adequate to accommodate the proposed demand. The letter is included at the back of Exhibit 25. Additional coordination with the Honolulu Board of Water Supply is required to confirm water availability for the increase in retail and commercial development from 75,000 SF to 80,000 SF if it is pursued. The final decision on the availability of water will be confirmed when the building permits are submitted for approval and Water System Facilities Charges are paid for by the applicant. The project team will submit construction plans for Honolulu Board of Water Supply review and approval and the construction schedule will be coordinated with the Honolulu Board of Water Supply to minimize impacts to the water system. Onsite fire protection requirements will be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department. In order to reduce the amount of drinking water required to serve the proposed project, all efforts will be made to include water reducing design elements into the proposed project such as WaterSense-labeled low flow and ultra-low flow fixtures and toilets, efficient automated irrigation systems such as drip systems and moisture sensors to prevent overwatering, and water catchment and reuse for nonpotable uses such as irrigation. Landscaping will incorporate xeriscaping and drought-tolerant or native and hardy climate-adapted plants that do not require significant amounts of water wherever possible. If dual water systems are installed at the proposed project, they will be designed and constructed to comply with all State Department of Health requirements.
Public Safety – Police, Fire and Emergency Medical	3	**Police.** While the proposed project will increase the population within the immediate project area, it is not anticipated to substantially increase the City and County of Honolulu's population as it is anticipated future residents will be relocating from the surrounding Kalihi-Pālama neighborhoods or elsewhere

Environmental Assessment Factor	Impact Code	Impact Evaluation
		on O'ahu. As a result, existing Honolulu Police Department services may need to shift manpower and resources closer to Iwilei as needed to serve the proposed project. MWH is currently located within the Honolulu Police Department's District 5 (Kalihi), Sector 5. The Honolulu Police Department maintains a Kalihi Substation that is open 24 hours a day on Kamehameha IV Road. See Figure 20. The approximate response time from the Kalihi Substation to MWH is nine minutes. There is also a police substation in Chinatown although in a different Honolulu Police Department District. **Fire.** The Site and surrounding area are within overlapping five-mile response zones of the Kalihi and Central (Downtown) Fire Stations (Figure 20). There may be an unavoidable and occasional need for emergency health care services. However, the MWH Redevelopment is not expected to have a long-term adverse impact on emergency medical services. However, similar to police protection, existing Honolulu Fire Department resources may need to be shifted closer to serve the proposed project. Municipal firefighting protection is provided by the Honolulu Fire Department's Central Fire Station on Beretania Street and Kalihi Fire Station located near the intersection of Kalihi Street and North King Street. The approximate response time from the Central Fire Station to the MWH is four minutes and from Kalihi Fire Station seven minutes. There are multiple fire hydrants along North Vineyard Boulevard, Liliha Street, North King Street, and Pua Lane, which border the project site. Fire hydrants are also located onsite along North Kukui Street and are in good condition. Onsite fire protection requirements will also be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department. The design of the future facilities will meet Honolulu Fire Department requirements. Project designers will continue to work closely with City Police, the Honolulu Fire Department, and other public service providers during the detailed design of the facilities to ensure the new structures at MWH will be easily accessible by emergency services to support favorable response times. **Emergency Medical Services.** The closest hospitals to the project site with emergency health care services are the Queen's Medical Center, St. Francis Hospital, and Kuakini Medical Center (Figure 20). The approximate response time from these emergency health care providers to the MWH is approximately five to six minutes by ambulance service. The Kalihi-Pālama

Environmental Assessment Factor	Impact Code	Impact Evaluation
		Health Center (KPHC) is located adjacent to the project site at the corner of Pua Lane and North King Street, which offers a range of medical and social services directed toward low-income ethnic minorities and the homeless. KPHC also provides a range of additional community services relevant to the current residents at MWH. While the proposed project will increase the population within the immediate project area, it is not anticipated to substantially increase regional population as it is anticipated future residents will be relocating from the surrounding Kalihi-Pālama neighborhoods or elsewhere on O‘ahu to the urban core of Honolulu. By providing housing closer to existing medical facilities, emergency response times are potentially reduced and access to medical care is improved.
Parks, Open Space and Recreation	2	The current MWH site contains a small playground in a fenced/secured yard, called the Keiki Pride Playground, located in an open area near the center of the site. New playground equipment and turf was recently installed for young children and toddlers. However, there is little for older children to play on or recreate. The main recreational center accessible for MWH residents is Pālama Settlement, located on North Vineyard Boulevard, less than half a mile northwest of the project site. Pālama Settlement is a non-profit, community-based agency that provides social programs and recreational facilities to serve low-income and public housing residents of the Kalihi neighborhood. Recreational facilities include a swimming pool, gymnasium, ball courts, and athletic fields. Pālama Settlement's Recreation Division also provides sports and fitness programs for all ages, in addition to many arts and crafts classes. A number of public parks and outdoor areas are also located in the Kalihi-Pālama neighborhood, many within walking distance of the MWH. The closest parks to the project site include Kauluwela Community Park, Beretania Community Park, Banyan Court, and A‘ala Park, which are all less than half a mile in the Diamond Head direction of the site. Beretania Community Park has the largest range of recreational features of these nearby parks, which include open grassy areas, a baseball field, tennis/basketball courts, and play structures. Just beyond those parks are the City and County of Honolulu's Foster Botanical Gardens and Liliuokalani Botanical Garden. At the heart of the proposed project is a new community park anchored by a multi-purpose hale where residents can gather for family parties and community celebrations. Smaller open spaces, community gardens, and recreational decks are dispersed throughout the site creating a hierarchy of outdoor open spaces

Environmental Assessment Factor	Impact Code	Impact Evaluation
		that bridge the interior and exterior elements and provide opportunities for future residents to enjoy the outdoors, grow their own food for better health and wellness, and recreate. Culturally significant plants and lei plants will also be considered in the landscape design of the project so the plantings can serve multiple purposes of being useful as well as providing shade, comfort, and aesthetics. Landscaping will incorporate xeriscaping and drought-tolerant or native and hardy climate-adapted plants that do not require significant amounts of water wherever possible. The selection of plants for landscaping will also consider whether water use, disease concerns, and planting and growing space requirements are appropriate for the particular location during detailed design. Street trees and shade trees will be planted throughout the project to increase the urban tree canopy and designed with adequate tree wells to minimize potential impacts to underground utilities and overhead lighting. The new landscaped areas can provide multiple benefits such as mitigating urban heat and cooling buildings reducing energy used for air conditioning, improving watershed health by installing rain gardens and bioswales within landscaped areas to help capture potential pollutants prior to entering the project's drainage system, decreasing erosion and pollution on our coral reefs, reducing stress and crime in neighborhoods which improves public health and safety, improving air quality by filtering non-point source pollution and sediments and increasing carbon sequestration, retaining stormwater and increasing groundwater recharge, providing urban wildlife habitat, and making our communities more livable. It is also recommended that all non-native plants selected and used in the detailed landscape design of the project be evaluated using the Hawai‘i Pacific Weed Risk Assessment tool. In addition, it is recommended that the landscaping plants used in the project should be from O‘ahu to avoid the importation of unwanted invasive species, pests, diseases, fungi, and other inadvertent introductions that could negatively impact Oahu’s native ecosystems and species.
Transportation and Accessibility	3	The conceptual site plan (Figure 3) brings back the historic block pattern of the area, which was smaller and more connected. It reintegrates the roughly 14.8-acre site back into the fabric of the surrounding community. Buildings are oriented toward the streets rather than turned inward as they are now, walled off from it. Off-street parking is proposed as structured parking to increase site efficiencies. The number of parking stalls are estimated at a minimum of 2,448 parking stalls based on City's TOD ordinance

Environmental Assessment Factor	Impact Code	Impact Evaluation
		and up to roughly 3,300 stalls depending on the needs of the commercial uses and residential demand for parking. This includes resident, guest, and ADA-accessible stalls. The parking may also be decoupled from non-public housing residential units in order to give future residents the option of having or not having a parking stall, given the easy access to public transportation and proximity to job centers. Sidewalks along the external streets directly adjacent to the proposed project will be activated with commercial storefronts and residential entries and landscaped with street trees to shelter pedestrians. The activated streets encourage walking and biking, which in turn support community safety and can contribute to improved individual health and community well-being and connectedness. The new internal streets will be designed as complete streets in accordance with State and City requirements to support multimodal circulation. They are purposely designed without direct connections through the property to discourage speeding and cut-through traffic but allow for convenient access throughout the site. Traffic calming provisions will also be considered in order to provide a safe and pleasant environment for pedestrians. The internal streets are also anticipated to remain private but will be publicly accessible. The existing signalized access at Kukui and Liliha Streets will remain, but the existing access at Pua Lane and Kukui Street are replaced by two new accesses on Pua Lane to eliminate the unobstructed path through the property. A new right-in/right-out only access is proposed on North Vineyard Boulevard as well as a fifth access on North King Street. In June 2018, Hawai‘i Department of Transportation Highways Division confirmed that Department of Transportation Administration was agreeable to the mid-block intersection on Vineyard. In addition, a letter dated October 3, 2018 from Chris M. Yamamoto, DOT Right-of Way Manager (Reference HWY-RM 3.94776) is included in this exhibit. The letter states there are no access restirctions along North Vineyard Boulevard in th area of the project and that no documentation of the access is therefore required by their office. See Exhibit 29 for a record of this correspondence. The North King Street access is shown as a potential vehicle, bicycle, and pedestrian access to provide easy access to the proposed retail at the corner of North King and Liliha Streets. It would also provide direct access for pedestrians and bicyclists to the planned Iwilei Transit Station, which is roughly a third-mile from the site. However, initial discussions with State and City transportation officials have indicated that it may need to be restricted to pedestrian and bicycle access only. This will continue to be explored with the State and City.

Environmental Assessment Factor	Impact Code	Impact Evaluation
		However, to be conservative, the multimodal transportation assessment prepared for the project by Fehr & Peers analyzed the potential traffic impacts based on the assumption that vehicle access would not be allowed at that location. The multimodal transportation assessment is attached as Exhibit 21. Supported by an existing population at MWH that already uses public transportation at higher rates than O'ahu as a whole to commute to work (38.5 percent compared with 8.7 percent[1]), the proposed project encourages the use of multi-modal transportation options as meaningful alternatives to driving that take advantage of the project's access to bicycle and pedestrian facilities as well as its close proximity to existing employment centers, public transit, and the future 'Iwilei rail station. These factors are incorporated into the multimodal transportation assessment and its analyses of potential impacts to vehicle traffic as well as transit, pedestrian, and bicycle transportation in the area. Of the fifteen intersections analyzed for traffic impacts (Figure 19), two intersections are currently operating at undesirable levels of service and will continue to operate at undesirable levels in the future even without the proposed project. These are the North King Street and Dillingham Boulevard/Liliha Street intersection and the North Vineyard Boulevard and Liliha Street intersection. A third intersection, North Vineyard Boulevard and A'ala Street, will operate at undesirable levels under future baseline conditions even without the project due to projected traffic growth and other developments anticipated to be completed during the study timeframe. With the proposed project, undesirable operations at the same three intersections continue to occur during both morning (AM) and afternoon (PM) peak hours of traffic at completion of the first phase of construction, the halfway point of project buildout, and at full buildout. The remaining twelve intersections are anticipated to operate at acceptable level of service even with full buildout of the proposed project. Potential traffic improvements were identified to mitigate the proposed project's cumulative impacts to the three intersections based on the impacts anticipated at full buildout. Consultation with the State of Hawai'i Department of Transportation and the City and County of Honolulu Department of Planning and Permitting was conducted throughout the planning process to

[1] American Community Survey, 2016. Accessed 2/27/2018: https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_15_5YR_S0802&prodType=table

Environmental Assessment Factor	Impact Code	Impact Evaluation
		address concerns and goals in balancing efficiency and safety for the operations of all travel modes in the vicinity of the project including pedestrian and bicycle. Mitigation measures are discussed below for each of the three potentially impacted intersections as well as their overall feasibility and recommendations for implementation. For the North King Street and Dillingham Boulevard/Liliha Street intersection, vehicle capacity enhancements are limited since the only possible mitigation would require acquiring substantial right-of-way on all approaches to widen all approaches to add additional through lanes and separate turn lanes. Even adding a separate right-turn lane ‘ewa-bound on the mauka side of North King Street would result in a minimal 0.5-second improvement in delay per vehicle over baseline conditions and the overall intersection would continue to operate at undesirable levels. Substantially reducing delay at this intersection would require all intersection approaches to be widened for additional lanes. However, this is not considered feasible as it would produce secondary adverse impacts to pedestrian and bicycle facilities and adjacent properties. Heavy congestion on these roadways is primarily due to regional traffic demand and is, therefore, beyond the scope of a single development project. Additional improvements including new street connections within the greater Kalihi area would help reduce demand at this intersection and would compensate for several of the prohibited turning movements at this location. For the North Vineyard Boulevard and Liliha Street intersection, potential improvements for vehicle operations include the construction of a second Diamond-Head-bound left-turn lane on North Vineyard Boulevard by: • Taking four feet from the existing median; • Reducing the existing Diamond-Head-bound lanes to ten feet for the left-turn lanes; • Reducing the through lanes to eleven feet; and • Reducing the right-turn lanes to thirteen feet to accommodate right-turn buses. This option would address additional vehicle demand from the project and allow for intersections to operate at better than baseline levels in both the AM and PM peak hours. The reduced median strip would still be able to accommodate an ADA-compliant pedestrian refuge area and no sidewalks or adjacent properties would be impacted. Measures to improve vehicle operations at the intersection of North Vineyard Boulevard and A‘ala Street include the restriping

Environmental Assessment Factor	Impact Code	Impact Evaluation
		of makai-bound lanes on A‘ala Street to provide a separate left-turn lane and a combined through/right-turn lane. This mitigation action is considered feasible since the roadway is a sufficient width to accommodate improvements without impact to bike or pedestrian facilities. The restriping would require the removal of five parking stalls on A‘ala Street, three on the ‘ewa side and two on the Diamond-Head side. These measures would allow the intersection to operate at a desirable level of service D in the PM peak period under Long-Term Full Buildout Conditions, which is assumed to balance out the reduction in on-street parking in the vicinity of the intersection. It should also be noted that the April 28, 2017 Recovery Plan presented by the Honolulu Authority for Rapid Transportation and the City and County of Honolulu proposes to defer construction of the Iwilei Station in order to save on initial construction costs. An additional sensitivity analysis was performed as part of the multimodal transportation assessment that analyzed the potential changes to traffic impacts should the Iwilei Station not be built. The results of the analysis concluded that trip estimates without the Iwilei station would increase daily trips by approximately nine percent and would only impact the same three study intersections at full buildout of the proposed MWH Redevelopment. The impact on the study intersections, however, would be minimal as the increases in traffic volume are anticipated to be distributed among streets and intersections throughout the entire study area. The current HART rail construction involves the relocation of utilities (also known as the City Center Utility Relocation) in the Dillingham Boulevard corridor and the closure of one lane in each direction on that roadway for an estimated period of two years. This construction configuration, also known as the Controlled Access scenario, is expected to divert traffic to other streets including N. King Street, Liliha Street, and N. Vineyard Boulevard adjacent to the Mayor Wright Housing project site. This diversion would primarily occur in the peak commute periods with lower levels of diversion expected outside the peak periods. Subsequent to utility relocation, the rail guideway will be constructed in the Dillingham Boulevard corridor. Because the Mayor Wright Housing project will be built in phases over an extended period of time, traffic conditions on the surrounding streets are expected to change due to HART construction activities and cannot be reasonably projected at this time. Due to the new driveway changes on Pua Lane, the following traffic calming enhancements and parking improvements are recommended for consideration:

Environmental Assessment Factor	Impact Code	Impact Evaluation
		• Consider installation of a neighborhood traffic circle at Pua Lane/Kanoa St/Project Makai Driveway - While there are already speed humps on Pua Lane to help moderate vehicle speeds, a neighborhood traffic circle at this intersection would further moderate vehicle speeds on the roadway and reduce the severity of potential collisions. The neighborhood traffic circle would also reduce stopping on Kanoa Street and the project's makai driveway. It should be noted that a neighborhood traffic circle would likely require elimination of several parking spaces on both sides of Pua Lane, mauka and makai of the neighborhood traffic circle. • Install Metered Parking on Pua Lane - This modification would promote frequent turnover of parked vehicles on Pua Lane and would have to be implemented by the City & County of Honolulu Department of Transportation Services. The metered parking could be enforced only during typical daytime hours (e.g. 8 AM to 6 PM), so that in the evening, area residents or guests could park on Pua Lane for longer periods of time. • Install bicycle sharrows on Pua Lane and Kanoa Street - this would highlight the presence of bicyclists on this street and inform motorists traveling on Pua Lane to share the roadway. This improvement would provide a visual connection to the planned bike facilities on North King Street that are being planned as part of the City & County's Complete Streets project. • Install curb extensions on the makai corners of the N. Vineyard Boulevard/Pua Lane intersection - this would increase pedestrian visibility through improved sight lines and also increase the pedestrian waiting space. Additionally, curb extensions would decrease the walking distance for pedestrians crossing Pua Lane. Given that this is improvement is on a State facility, coordination with the State of Hawai‘i Department of Transportation is required to implement this improvement. In addition to roadway improvements to accommodate additional vehicle demand, the proposed project could implement transportation demand management strategies to reduce overall site-generated traffic volumes. Application of transportation demand management strategies that could lead to vehicle trip reduction, use of alternative modes, and better traffic management at the site could include such provisions such as a transportation kiosk and/or on-line portal for information on ride-sharing, transit, bicycling, walking, and options for accessing the site without using a private automobile and unbundling parking from apartment units to reduce rental costs for some units and to incentivize use of non-auto travel modes. Prior to the

Environmental Assessment Factor	Impact Code	Impact Evaluation
		implementation of any transportation demand management measures, the project team will coordinate with the City and County of Honolulu and/or transit service providers. Short-term traffic impacts will result during construction for both onsite and offsite improvements. Traffic may be impacted when materials and equipment are transported to the site. Prior to construction being initiated on the Mayor Wright site, the project will prepare a construction traffic management plan (CTMP) to address how trucks and construction worker traffic will access and circulate around the project site. The current conditions on streets fronting the site at the time project construction is initiated will be used to make recommendations on construction traffic circulation, time periods to avoid, and other management strategies. The CTMP will be made available for review and comment by City and County Department of Planning and Permitting (DPP) and State of Hawai‘i Department of Transportation – Highways Division (HDOT-HWY) staff because both agencies will need to authorize encroachment and/or building-related permits. At that time, the project contractor will work with the affected agencies and coordinate with stakeholders to minimize construction traffic impacts, identify any potential circulation issues, and implement strategies to reduce or eliminate impacts. The CTMP will detail any road or lane closures and potential impacts to any of the bus stops should they be required, and the construction team will work closely with the State and City on appropriate solutions to mitigate those impacts. If there is a need to temporarily relocate any bus stops, the area should be at least 150 feet in length to accommodate two 60-foot buses and will be coordinated with the Department of Transportation Services Public Transit Division. The Department of Transportation Services also recommends that construction materials and equipment be transferred to and from the project site during off-peak traffic hours (8:30 a.m. to 3:30 p.m.) as well as other best practice traffic management plans to minimize any possible disruption to pedestrians and traffic on the local streets and project driveways. The project team will collaborate with the Honolulu Police Department and Department of Transportation Services to determine the optimum locations for entering and exiting the site during construction activities. The Honolulu Police Department and Department of Transportation Services will be provided traffic plans prior to the start of construction once finalized with their input. Traffic plans will indicate the use of traffic controls (signage, coning, etc.), flag persons and off-duty officers as required. Prior to the commencement of construction, a pre-construction conference with subcontractors

Environmental Assessment Factor	Impact Code	Impact Evaluation
		and suppliers will be held to communicate the traffic plan to all traveling and delivering material to the site. Safety orientations for all personnel working onsite will be held to educate them on the proper procedures for entering and exiting the site. Construction schedules should also be coordinated with other nearby properties that may have planned improvements to minimize potential impacts on adjacent streets wherever feasible. In addition, updates regarding potential traffic impacts during construction will be given to the public via media outreach and the project website. Direct updates can also be sent via email or other electronic methods as preferred to area residents, businesses, schools, City and State officials, emergency personnel, Oʻahu Transit Services, and others. Regular updates will also be shared at the monthly Kalihi-Pālama Neighborhood Board meetings. Also, once construction commences, approved best management practices including controlling dirt and debris on area roadways must be installed along Pua Lane and North King Street as well as other areas roadways. A National Pollutant Discharge Elimination System permit will also be submitted to the State Department of Health for approval, which will include a discussion of the best management practices proposed at the time of construction. Also, during and once construction is completed, any damages or deficiencies to Pua Lane and North King Street and other area rights-of-way caused by the project must be corrected to City and State standards and accepted by the City and State. These requirements will be incorporated into the construction documents. For public transit, the project is expected to increase ridership in the area over the long-term. The site is well-serviced by both bus and future rail transit and is generally not expected to substantially increase the transit demand to a level where it could not be accommodated by existing or planned facilities. In addition, the new internal street network will support and encourage access through the site directly to area bus stops and the future rail station. The project is also expected to not conflict with any existing facilities and planned improvements. Recommendations have also been made to improve lighting at area bus stops to improve safety and will be included throughout the internal street network as well. The project will support the use of existing transit systems through integration of multimodal facilities such as bicycle parking and sidewalk enhancements in the site design to improve accessibility to public transit systems. The project team will coordinate with the City's Department of Transportation Services Public Transit Division to ensure the project does not adversely affect public transit services including

Environmental Assessment Factor	Impact Code	Impact Evaluation
		bus operations, bus routes, bus stops, and paratransit operations. Project plans will be submitted to the Department of Transportation Services Public Transit Division for review and approval. Thus, the project's impacts to transit facilities and services are intended to support ridership. Short-term impacts to the bus stops directly adjacent to the site may occur during construction should there be any road or lane closures. Bus stops may have to be temporarily relocated away from construction activities impacting the fronting the property and the development team will work closely with City transit officials to provide safe alternatives for the bus stops. This will include safe pedestrian and ADA-accessible access to the temporarily relocated bus stops and full replacement of the bus stop once construction is complete. For pedestrian and bicycle circulation, the proposed project follows new urbanist design principles that include an emphasis on walkability and connectivity through the pedestrian and bicycle networks within the project site, on adjacent streets, and via connections to the surrounding community. The project proposes to develop complete streets within the site and enhancement of the external streets with activated streetscapes including sidewalks that are shaded by street trees and awnings along commercial frontages and residential buildings that face the streets rather than turned inward as they currently are at MWH. Street trees and landscaping strips will be designed with adequate tree wells and planter areas to minimize potential impacts to underground utilities and overhead lighting. Short-term temporary impacts to pedestrian and bicycle facilities may occur during construction such as sidewalk closures and rerouting of pedestrians and bicycles away from any potentially unsafe conditions. The development team will work closely with State and City roadway officials to develop safe alternate routes and include appropriate signage during construction to direct pedestrians and bicyclists to appropriate detours. Generally, the proposed project is not expected to substantially increase the walking, biking, or transit demand to a level where it could not be accommodated by existing or planned facilities. In addition, the project is expected to enhance multi-modal facilities and services, especially with the promotion of the use of passive and active spaces and non-motorized modes.

Environmental Assessment Factor	Impact Code	Impact Evaluation
NATURAL FEATURES		
Unique Natural Features, Water Resources	2	Due to previous urban development, there are no unique natural features or water resources existing on the site.
Vegetation, Wildlife	3	Native vegetation and wildlife have been altered by previous development. No Federally listed Threatened or Endangered plant or fauna species were found on the property during the biological survey performed for the existing site, nor were any found that are candidates for such status (see Exhibit 7). There are no critical habitats for federally or State-listed Endangered or Threatened species onsite (Figure 17). U.S. Fish & Wildlife Service data indicates that the following federally listed species may occur or transit through the vicinity of the proposed project area: endangered Hawaiian hoary bat (*Lasiurus cinereus semotus*); endangered Hawaiian petrel (*Pterodroma sandwichensis*), threatened Newell's shearwater (*Puffinus auricularis newelli*), and endangered Hawai‘i Distinct Population Segment (DPS) of the band-rumped storm-petrel (*Oceanodroma castro*). In addition, no wetlands, streams, or estuaries are present on the MWH property. In addition, although no endangered manu o kū or white tern (*Gygis alba rothschildi*) were seen during the survey, their range and nesting area in urban Honolulu is growing according to the State Department of Land and Natural Resources Division of Forestry and Wildlife. The project is also proposing to install more trees along the streets and within the project site, which may encourage the area's use by the manu o kū. The following protocols for surveying trees for the manu o kū and their eggs should be followed prior to tree trimming or removal. If there are no known manu o kū nests in the project area when work on any trees commences, then a quick survey of the trees should still be done before proceeding with any tree trimming or removal. The DOFAW O‘ahu Branch Wildlife Program will be contacted if there are any manu o kū or eggs seen onsite prior to the commencement of work. If there are known manu o kū nests in the project area at the time when project work commences, a qualified individual (e.g., wildlife biologist) should make a more in-depth assessment and provide a timeframe in which tree trimming or removal can be done. The work should only proceed outside the nesting period, which can occur year-round, so site-specific monitoring should be done prior to any work on impacted trees.

Field Inspections (Date and completed by)**:**

- May 2016 – Robert Hobdy (Flora and Fauna Survey)
- July 2016 – Weston Solutions (Phase I Environmental Site Assessment)
- August 2016 – Fehr & Peers (Multimodal Transportation Assessment)
- September 2016 – TCP Hawai‘i, LLC (Archaeological Inventory Survey, Cultural Impact Assessment)
- March, April, May 2017 – Fung Associates, Inc. (Reconnaissance Level Survey, Historic Architecture)
- April 2017 – Terry A. Hayes Associates, Inc. (Noise and Vibration Study)
- May 2016 – June 2017 – MWH Partners, PBR Hawaii & Associates, Inc., Torti Gallas + Partners, Concordia, RM Towill Corporation (Various Site Visits, Community and Resident Meetings)
- April and May 2018 – Weston Solutions (Phase II Environmental Site Assessment)
- October through November 2018 – Geolabs, Inc. (Geotechnical Soil Testing)

ATTACHMENT 8

Cumulative Impact Analysis [24 CFR 58.32]**:** To determine whether the proposed action may have a significant impact on the environment, expected consequences, both primary and secondary, and the cumulative as well as short- and long-term effects have been evaluated. Based on the studies performed and research evaluated, it is anticipated that the proposed project will have an overall net cumulative beneficial impact, particularly with regards to socio-economic impacts, public health, and efficient land development, which is consistent with the City and County of Honolulu's vision for this new TOD neighborhood. The proposed project helps address the critical affordable housing shortage with the provision of much needed affordable rental housing close to Downtown Honolulu and other employment centers and will be easily accessible from the future rail transit.

Although there will be cumulative impacts to the Kalihi-Pālama-Iwilei area's infrastructure, roadways and traffic, transit ridership, density, medical services, and public services such as police, fire, emergency, and schools, they are all consistent with the City's long-range vision to intensify development in a new mixed-use district in Iwilei. Included in the City's implementation actions for the Downtown Neighborhood TOD Plan is the prioritization of upgrades to the area's infrastructure to support the desired growth and the desired action of revitalizing MWH and other Hawai‘i Public Housing Authority TOD properties through a partnership between the City, the Hawai‘i Public Housing Authority, and other State agencies to “increase development of affordable mixed-income housing on State and City lands. A desired minimum of 2,000 units is established as a development target for the affordable and permanent supportive housing on these lands.” (Dyett and Bhatiam, 2017).

The cumulative intensification of development in the area will also change the regional cityscape and viewplanes, which is consistent with the Downtown Neighborhood TOD Plan's vision for a “transformative,” “high-intensity mixed-use Iwilei district.” However, the proposed development will be designed to mitigate visual impacts by locating the taller towers in the interior to the site and orienting them with their longer sides running mauka-makai and lining the streets with the lower- and mid-rise buildings to preserve distant mauka views.

The project will also include landscaping using native and/or drought-tolerant plants and xeriscaping, a community park, and complete streets to support community activities and pedestrian, bicycle, and transit use to reduce impacts to vehicular traffic and encourage healthier, active lifestyles. Street trees and shade trees will be planted throughout the project to increase the urban tree canopy. The new landscaped areas can provide multiple benefits such as mitigating urban heat and cooling buildings reducing energy used for air conditioning, improving watershed health by installing rain gardens and bioswales within landscaped areas to help capture potential pollutants prior to entering the project's drainage system, decreasing erosion and pollution on our coral reefs, reducing stress and crime in neighborhoods which improves public health and safety, improving air quality by filtering non-point source pollution and sediments and increasing carbon sequestration, retaining stormwater and increasing groundwater recharge, providing urban wildlife habitat, and making our communities more livable. Street trees and landscaping strips will be designed with adequate tree wells and planter areas to minimize potential impacts to underground utilities and overhead lighting.

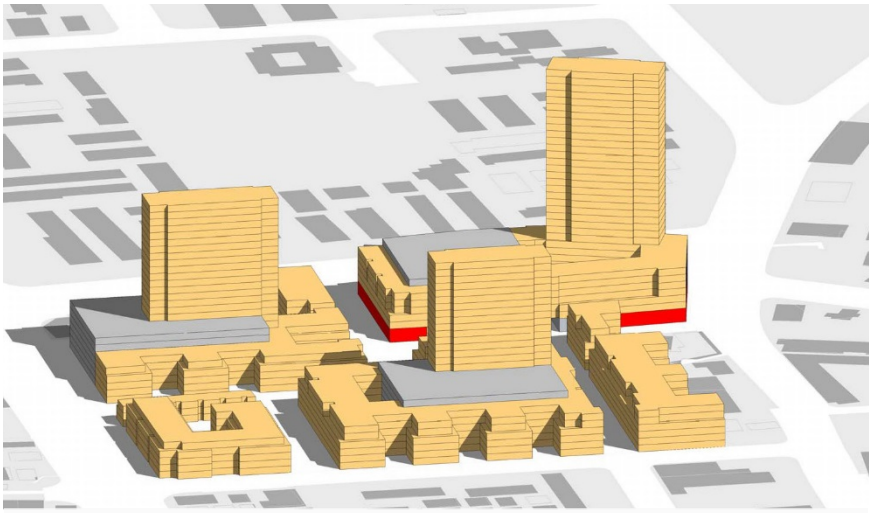
Cumulative impacts may also occur to the economy as the mix of uses in the area diversifies and is able to support additional businesses and services. The surrounding land values may also increase due to the increased activity and densities. All of this new activity and density will increase tax revenues for both the State and the City in general excise tax, income tax, and property tax collections. However, because the proposed MWH Redevelopment project site is State-owned, it will not contribute to increased property tax revenues except for the onsite commercial uses. Smaller property owners in the area may be impacted disproportionately as increasing land values will also increase the amount of property tax, they will pay which may impact the ability for smaller businesses and homeowners to remain in the area.

Cumulative impacts may also change the demographics of the area, impacting social networks and increasing the interactions between different income and ethnic groups. However, the overall cumulative impact of increased rental housing options, especially affordable rental housing, commercial activity, and increased social diversity are anticipated to improve the overall social-economic conditions of the area as well as improve safety as natural surveillance will increase with the increase in residents and human activity in the area. Individual health and community well-being are also anticipated to improve as people of all ages and abilities will be able to circulate easily within this new mixed-use community and access needed services and businesses, which will be in close proximity to residences, jobs, schools, and recreational amenities. Although the cumulative impact to vehicle traffic will worsen at two of the busiest intersections during the peak hours of traffic, this has a positive effect of encouraging more people walk, bike, or take transit as they will become more convenient and efficient modes of transportation, thereby encouraging healthier activities and lifestyles. This in turn has an overall positive cumulative impact on public health.

ATTACHMENT 9

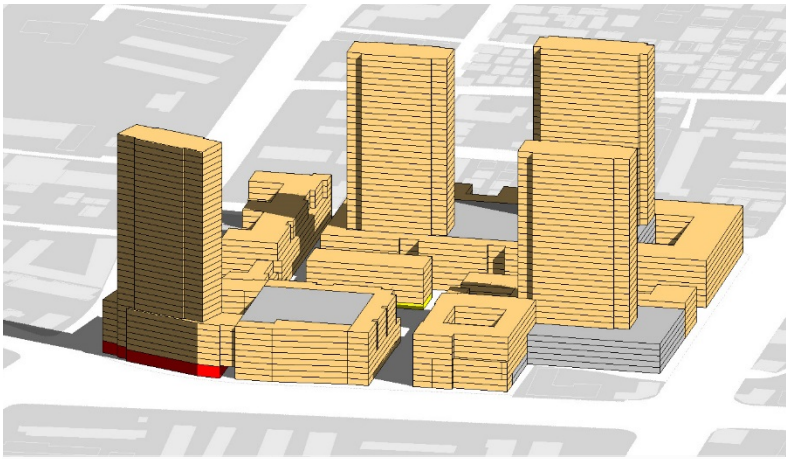
Alternatives [24 CFR 58.40(e); 40 CFR 1508.9]:
This section describes alternatives to the MWH Redevelopment design, along with reasons why each alternative was rejected.

2,000-Unit and 3,000-Unit Scenarios. In addition to the proposed scenario for the redevelopment project, a 2,000-residential unit scenario and a 3,000-residential unit scenario were studied. In both scenarios, as well as the preferred scenario, up to 80,000 SF of commercial was included and all of the stated objectives could be obtained. While fewer towers and lower perimeter buildings would be needed, the 2,000-unit scenario was rejected as feedback from area legislators recommended that the project provide as many residential units as possible in order to fill the dire need for rental housing, and especially affordable rental housing, in the urban core of Honolulu.



Conceptual massing study model for the 2,000-unit scenario (View looking east)

In response, a 3,000-unit scenario was prepared. The 3,000-unit scenario was rejected over concerns for the massing and scale of the buildings and its visual impacts to the surrounding streets and properties. In order to accommodate the 3,000 units and the required parking relative to that density, the towers would all need to be built to the maximum height limit of 400' with all of the podium buildings fronting the streets being taller at nine to ten to stories. In addition, the second street connection through the site to Pua Lane is lost, which reduces connectivity of the site, and a full-level of underground parking would be needed to keep the parking structures at nine to ten stories above grade. However, the costs associated with the excavation given the shallow water table and lithified coral reef bedrock along the Pua Lane side of the property and the installation and ongoing maintenance of mechanical equipment required to ventilate and fire sprinkler the underground parking will add significant costs and electricity usage. It will also increase the potential of disturbing subsurface archaeological and historic remains, impacting neighboring properties, and a longer construction duration. It will also increase noise, vibration, and dust impacts during construction.



Conceptual massing study model for the 3,000-unit scenario (View looking west)

Downtown Neighborhood Transit Oriented Development (TOD) Plan Density. During the State EISPN comment period, a request was received to analyze the TOD density proposed in the then draft Downtown Neighborhood TOD Plan (2015 Draft Final version). In rough estimates, the above 2,000-unit scenario has an overall FAR of 3.9 with just over 2,000,000 SF in total building area (when roughly 125,000 SF is deducted from the total site area for the new internal streets). The 2015 draft of the Downtown Neighborhood TOD Plan previously allowed up to 1.9 FAR for the project site which if holding for the resulting site area (522,000 SF), would equate to an estimated 991,800 SF of permitted building area. This would translate into approximately 1,000 residential units if up to 80,000 SF of commercial space was maintained as part of the mix. The scenario is not preferred as it only increases the amount of rental housing units by 636 units as opposed to the preferred plan, which adds 2,084-additional units over the existing 364 public housing units.

Alternative Street Alignments and Site Plan Layouts. Throughout the master plan process, the design team tested various site plan layouts that accommodated the targeted number of residential and commercial uses, while providing the desired connectivity to the surrounding community and breaking up of the block sizes. These included multiple accesses off North Vineyard Boulevard, multiple accesses off Liliha Street, and an additional access at Desha Lane. Due to the higher speed traffic on North Vineyard Boulevard and complex intersection approaches and heavy traffic on Liliha Street, the preferred conceptual site plan only has one access off both those streets as the existing Liliha and Kukui Street intersection is already signalized and operating well and the higher speeds on North Vineyard Boulevard are not conducive to safe ingress and egress. Also, some of the street patterns created direct connections between Liliha Street and Pua Lane, and North Vineyard Boulevard and North King Street. These alignments were not favored by residents as it encouraged drivers to speed and cut through the site, causing potentially unsafe conditions. The preferred site plan balances increased and improved accessibility and connectivity through the site, with safety and traffic calming measures.

Study Sketches of Alternative Street Alignments and Site Plan Layouts

Alternative Phasing Plans. The proposed phasing plan estimates that the site will be redeveloped in five phases, each taking roughly two years to complete for a total of 10+ years. Other phasing plans were considered including redeveloping the entire site at once or in fewer increments. These may shorten the overall time period and simplify demolition and construction operations. However, they may increase traffic, noise, vibration, and air quality impacts related to demolition and construction during that time and would require more households to be relocated offsite in the initial phase and more disruption to more people. Given the shortage of affordable housing and rental units, this may require relocation to more distant locations or to undesirable locations. The proposed phasing attempts to minimize the number of households who need to be relocated offsite to ease the transition for current residents into their new units. A shorter construction timeline would also hasten the potential impacts to public services such as fire, police, and public schools giving the City and State agencies a shorter time period to adjust to the new community at MWH.

Net-Zero Energy Alternative. Another comment received during the State EISPN public comment period asked that a net-zero energy alternative be studied. In order for the project to be net-zero energy, it would have to generate 100 percent of the projected 9.7 MW of electricity demand created by the proposed project with renewable energy resources. Based on the renewable energy resources available at the site, and the density of the proposed uses within the site and the surrounding properties, the most feasible renewable energy source would be solar energy via photovoltaic (PV) electricity production. Based on current PV technologies, 1 MW or 1,000 kilowatts of power generated from photovoltaic panels would require roughly 4 acres of PV panels. For the full build-out of a 9.7 MW PV facility, approximately 39 acres of land would be needed to entirely offset the projected electricity load. The entire parcel is only 14.8 acres and would not be large enough to house the required number of panels.

Another possible means of achieving a net-zero energy project would be to acquire or lease roughly 40 acres of land and develop the facility and infrastructure to connect to HECO's grid. Rough estimates provided by the electrical engineer at $2.25 per Watt for a 10 MW facility would cost $25,000,000 not including the lease or cost of the land. If battery storage onsite is required, a 5 MW battery storage system would cost roughly $62,000,000 for a Lithium-Ion system and $10,000,000 for a lead-acid system. They also would require a large amount of space that would otherwise be used for residential, commercial, or community space and would be a potential fire hazard, which would need to be appropriately designed and located to minimize potential impacts. Also, if pursued by a third party provider, the connection of a 10 MW alternate energy facility to HECO's grid would require that: a competitive bidding process be conducted to establish the baseline price at which the electricity from the PV facility might be purchased; a Power Purchase Agreement (PPA) be negotiated between the PV facility developer and HECO; and Public Utilities Commission approval for the PPA be obtained. While a highly sustainable goal would be achieved and ongoing electricity costs would be eliminated to the benefit of future residents and site managers with a net-zero energy alternative, the site constraints, upfront costs, and complexity and timing of additional permitting and approvals to achieve implementation make this alternative infeasible at this time.

No Action Alternative [24 CFR 58.40(e)]:
The No Action alternative does not accomplish the stated project purpose and the State's goal of increasing the development of at least 22,500 affordable rental housing units available for occupancy by December 2026 as it leaves the existing site in its current condition. The existing 364 public housing units would remain, and no additional affordable rental housing units would be provided. It also leaves current residents in functionally obsolete units that require substantial maintenance and repair and have outlasted their useful life. Although the project was recently upgraded in 1984, the units will not be of high-quality sustainable design as the existing site was built in the early 1950s and does not meet current standards for ADA accessibility, contains lead-based paints and asbestos, and would require significant capital improvements to retrofit and upgrade. The current layout isolates it from the surrounding community by having the

residential units face inward and is completely surrounded by fencing, making it inaccessible except at the two vehicle access points on North Kukui Street and the five pedestrian gates which are locked at 10 PM nightly. The site will not be consistent with the Downtown Neighborhood TOD Plan for a higher intensity mixed-use community. It would continue to leverage federal sources of support as it currently does. However, it would not leverage private funding to maximize the efficiency and effectiveness of public resources.

ATTACHMENT 10

Mitigation Measures and Conditions [40 CFR 1505.2(c)]

Summarize below all mitigation measures adopted by the Responsible Entity to reduce, avoid, or eliminate adverse environmental impacts and to avoid non-compliance or non-conformance with the above-listed authorities and factors. These measures/conditions must be incorporated into project contracts, development agreements, and other relevant documents. The staff responsible for implementing and monitoring mitigation measures should be clearly identified in the mitigation plan.

Law, Authority, or Factor	Mitigation Measure
Historic Preservation	No further work is recommended for the four newly identified sites found during the Archaeological Inventory Survey. The evidence gathered during TCP's fieldwork indicate the presence of a project-area wide grading/bulldozing event that appears to have leveled the entire property of any previous structural remains. Also, no basalt boulders typically related to potential traditional, Hawaiian rock-structural remains were found in the excavated trenches other than late historic/early modern pit fills. There were also no naturally-occurring deposits of clean beach or dune sand that typically contain traditional Hawaiian burials in the test trenches, and historical evidence shows that almost the entire project site was a network of loʻi (pond-field kalo gardens) including loʻi iloko (kalo pond-field also used as a fishpond) and related house sites in the mid-1800s. However, archaeological monitoring will be done throughout construction of the project. In addition, the existing buildings within the MWH site were previously identified as being eligible for listing in the Hawaiʻi or National Registers of Historic Places under Criterion "A" for its association with significant historic events in the reconnaissance level survey. Therefore, Section 106 consultation was conducted and an MOA was executed by the Responsible Entity (Governor of the State of Hawaiʻi), the Hawaiʻi Public Housing Authority, the State Historic Preservation Division, MWH Partners, LLC, and the consulting party, the Historic Hawaii Foundation, on November 13, 2019 stipulating the actions required to mitigate the adverse effect of the proposed undertaking. In summary, the agreed upon mitigation includes: • Documentation of the Mayor Wright Homes Complex in compliance with National Park Service standards prior to demolition and submittal of National Park Services-approved documentation to the State Historic Preservation Division. Once approved by the State Historic Preservation Division, recordation is required at the Hawaiʻi State Archives, University of Hawaiʻi at Mānoa, and other local repositories; • Project design review by the State Historic Preservation Division and the Historic Hawaii Foundation at the schematic design and design development stages of the project to minimize or mitigate potential adverse effect to directly adjacent eligible historic properties;

Law, Authority, or Factor	Mitigation Measure
	• Documentary film production for educational purposes of the redevelopment effort and exploration and celebration of the unique history of MWH including a minimum of two oral histories of current or former residents; • Community education including interpretive materials on the Liliha/Pālama neighborhood, Native Hawaiian history of the area, summary of the historic aspects of MWH and its significance as public housing, identification of other eligible historic sites in the Liliha/Pālama neighborhood, and installation of at least five interpretive signs/displays by the time of occupancy of Phase 1 of the project; • Project construction mitigation including historic architectural pre-construction inspection surveys and noise and vibration controls including proper construction machinery use and maintenance; • Archaeological monitoring in accordance with a State Historic Preservation Division-approved archaeological monitoring plan; • Procedures requiring work to cease should additional archaeological or human remains be found during construction and proper notification and documentation occur per State and federal requirements; and • Annual summary written report submitted to all parties of the MOA detailing the work undertaken, scheduling changes that may materially affect the project timeline, and any problems encountered. Meetings will be held as necessary to resolve any issues. Although not specifically stipulated in the MOA, all building permits will also be routed to the State Department of Land and Natural Resources Historic Preservation Division for review. The MOA is attached as Exhibit14. According to the information provided by former and current residents of MWH, a potential cultural impact from the project may result from the inability of different ethnic groups to participate in culturally important activities, which they are currently restricted from as well. These impacts include, but are not limited to, the ability for groups to hold and participate in culturally significant gatherings and festivals, growing traditional crops and other foods for their own use, and engaging in any customary outdoor activities that require access to open space. The Cultural Impact Assessment concluded that the extensive cultural information gathered for the MWH warrants recommendations for cultural and community elements of the redevelopment project. The following recommendations for the redevelopment of MWH are based on information from formal interviews

Law, Authority, or Factor	Mitigation Measure
	conducted for the Cultural Impact Assessment as well as previous oral-history projects: • Include places where the tenants can plant small gardens in order to live in the Hawaiian lifestyle they grew up with, and to be allowed to grow culturally significant plants such as ti leaf and others (e.g., bananas, papaya, ginger, plumeria, etc.). • Include a funding stream whereby community programs, events and activities are designed and implemented that bring people of different ethnic/cultural groups together, and that provide safe and healthy activities for kids and teens. These programs, events and activities could include traditional and customary (cultural) practices that highlight the different groups that call MWH their home. The idea here is to help build community. • Develop a community-based garden program at the redeveloped MWH property so that residents can benefit from the raising and eating of fresh food. Well into the 20th century, major portions of the MWH property were still being used to grow food, including taro and other crops. Historic maps from as late as the 1920s show this continuing pattern of land use. Therefore, this recommendation about starting a community garden project or program would be consistent with the history of this place. The proposed MWH master plan includes a mix of community spaces where people can gather, recreate, and celebrate. At the heart of the plan is a community park flanked by the community center and a multipurpose hale where community activities can be held as well as informal gatherings for family and friends. In addition, the initial landscape concept incorporates several community gardens and raised food gardens throughout the site where future residents can grow their own food. Culturally significant plants and lei plants will also be considered in the landscape design of the project so the plantings can serve multiple purposes of being useful as well as providing shade, comfort, and aesthetics. MWH Partners, LLC are also committed to providing onsite community and social services to support future residents as well as partner with neighboring service providers to complement the services already available in the larger community. These may include and are not limited to childcare and afterschool activities, education and job training, elder care and support, food distribution and summer meals, and resident associations. Also, community festivals and celebrations may be held to commemorate the holidays and provide opportunities where the different ethnic groups can share their cultural traditions with other residents in the community. The MWH Partners, LLC is preparing a Human Capital Plan to guide them in creating a community that enhances the quality of life for its residents, which will continually be updated in their ongoing management of the site.

Law, Authority, or Factor	Mitigation Measure
Contamination and Toxic Substances	Given the age of the existing MWH facilities and the initial finding of lead-based and lead-containing paint and asbestos in one of the existing buildings, the Hawai‘i Public Housing Authority and MWH Partners, LLC will coordinate with the State Department of Health Asbestos Abatement Office of the Noise, Radiation and Indoor Air Quality Branch prior to demolition and work with contractors who are specifically trained in lead-based paint and asbestos containing materials abatement to safely remove these hazardous materials and limit any potential exposure to residents who may be onsite during demolition. Demolition activities associated with the proposed project would be subject to the requirements of Title 11 Hawai‘i Administrative Rules (HAR), DOH, Chapter 501, “Asbestos Requirements.” The proposed project would complete an Asbestos Renovation/Demolition Survey to determine the potential for the presence of asbestos-containing materials. Additionally, all demolition and construction activities would adhere to the provisions of the State Department of Health Construction and Demolition Waste Disposal General Guidance to ensure proper handling of potentially contaminated materials. Full inspections by certified inspectors will be carried out prior to demolition and a lead-based paint and asbestos-containing materials abatement plan developed with all required federal, State, and City agencies prior to demolition. All abatement work will be performed per all applicable State and federal requirements and guidelines. Upon completion of the work, all required clearances will be provided for the abated areas of work and lead based paint chips will be HEPA-vacuumed from the surrounding ground and placed in DOT-approved disposal containers. All material disposal manifests will be provided from certified disposal sites upon final disposition of the hazardous materials. A Phase II ESA was also performed and completed in July 2018 by Weston Solutions to determine if any of the identified RECs from the Phase I ESA require mitigation. They found no soil samples collected from soil borings were above the State Department of Health Unrestricted Environmental Action Levels (EAL). However, two out of three decision units (DU-06 and DU-35) tested above the State Department of Health Unrestricted EAL for lead. In addition, one groundwater sample result (GW-01) initially tested above the State Department of Health Unrestricted EAL for bromomethane and therefore was retested. Upon resampling GW-01, the bromomethane result was found to be below the Unrestricted EAL, making all groundwater results below the State Department of Health Unrestricted EALs for all analyzed contaminants. Based on the results and conclusions of the Phase II ESA, lead has been identified in soil at the subject property at concentrations above the Unrestricted Use EAL that may require additional activities to be performed. WESTON recommended the following:

Law, Authority, or Factor	Mitigation Measure
	• Additional multi-incremental sampling should be performed around all buildings in order to evaluate the lead contamination throughout the Site. • All contaminated soil above the Unrestricted Use EAL should be excavated and disposed of. Waste characterization soil samples should be collected and analyzed by toxicity characteristic leaching procedure to ensure proper disposal at an appropriate landfill. MWH Partners will comply and follow-up with the above recommended mitigation.
Hazards and Nuisances including Site Safety and Site Generated Noise - Noise	Short term construction activities for the redevelopment are expected to have temporary increases in ambient noise levels in the project area on an intermittent basis. Noise levels would fluctuate depending on the construction phase and type of construction activity (e.g. demolition, site preparation, pile driving, if necessary, etc.), equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers and require mitigation. Construction noise levels in the vicinity of the project site would exceed the allowable noise levels listed by the State Department of Health Noise Reference Manual Oʻahu Edition for local levels as well as the allowable noise levels listed by the HAR for state-wide levels and will require a Noise Permit from the State Department of Health. Construction activity would typically occur from 7:00 a.m. to 6:00 p.m., Monday through Friday and 9:00 a.m. to 6:00 p.m. on Saturdays, Sundays, and holidays, which would help to minimize potential adverse effects to residents and neighboring properties from construction noise and vibration. In addition, to minimize the potential adverse effects related to construction noise, the following is recommended for the development and construction team: • The project applicant shall obtain a noise permit associated with exceeding a noise level of 78 dBA Leq as discussed in the Noise Reference Manual Oʻahu Edition. • The project applicant shall obtain a noise permit associated with exceeding the maximum permissible noise levels discussed in the Hawaiʻi Administrative Rules. • The construction contractor shall use specialty equipment with enclosed engines and/or high-performance mufflers. • The construction contractor shall locate equipment and staging areas as far from noise-sensitive receivers as practicable. • The construction contractor shall limit unnecessary idling of equipment. • The construction contractor shall install temporary noise barriers to enclose stationary noise sources, such as compressors, generators, laydown and staging areas, and other noisy equipment.

Law, Authority, or Factor	Mitigation Measure
	• Prior to the commencement of construction activities, notification shall be provided to the on-site residential uses that discloses the construction schedule, including the various types of activities and equipment that would be occurring throughout the duration of the construction period. • A "noise disturbance coordinator" shall be established. The noise disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The noise disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable measures such that the complaint is resolved. All notices that are posted at the construction site shall list the telephone number for the noise disturbance coordinator. Stationary noise generated at the site would primarily be generated from the operation of ventilation and air conditioning systems. Although the precise locations of these systems are unknown until detailed site plans are created, the described stationary noise sources may potentially exceed the maximum permissible sound levels as detailed in the HAR. Therefore, mitigation will project designers to include enclosures for mechanical equipment, such that noise levels do not exceed the maximum permissible noise levels listed in the HAR.
Hazards and Nuisances including Site Safety and Site Generated Noise - Vibration	Temporary vibration impacts will occur during construction. Construction activity can result in varying degrees of ground vibration based on the equipment and methods used for construction. Several buildings about the project site and several potentially sensitive buildings near the site were identified. Site visits performed by Terry A. Hayes Associates suggest that the majority of these buildings were constructed using engineered concrete and masonry. Federal guidance indicates that such buildings can withstand up to 0.3 inches per second without experiencing damage. In order to mitigate construction-related vibration impacts, construction activity should typically only occur from 7:00 a.m. to 6:00 p.m., Monday through Friday and 9:00 a.m. to 6:00 p.m. on Saturdays, Sundays, and holidays. In addition, to help minimize potential adverse effects associated with damage to adjacent buildings, contractors should implement the following mitigation measures for construction vibration for the sensitive structures such as the neighboring Fujii Store and Tenement Houses located close to proposed construction activities: • Prior to issuance of a grading/shoring permit, a qualified structural engineer shall survey the existing foundation and structural integrity of off-site buildings that will be located within 11 feet of large bulldozers and similar vibration-generating equipment and at the Fujii Store and Tenement Houses. The survey shall be submitted to the appropriate mitigation monitor. At the conclusion of vibration causing activities, the qualified structural engineer

Law, Authority, or Factor	Mitigation Measure
	shall issue a follow-on letter describing damage, if any, to the adjacent buildings. The letter shall identify recommendations for any repair and certify the completion of any repairs as necessary to confirm the integrity of the foundation and structure of the adjacent buildings. • If the construction plans call for high-vibration construction activities being performed close to structures, the contractor may be required to use alternative procedures that produce lower vibration levels. Examples of high-vibration construction activities include the use of pavement breakers, vibratory compaction, and hoe rams next to sensitive buildings. Alternative procedures shall include the use of non-vibratory compaction in limited areas and concrete saws in place of jackhammers or pavement breakers for demolition. • If piles are required to support new structures, pile driving shall be prohibited in places of cast-in-drilled-hole (CIDH) piles or caissons.
Hazards and Nuisances including Site Safety and Site Generated Noise - Air Quality	All demolition and construction activities will adhere to the provisions of the State Department of Health Construction and Demolition Waste Disposal General Guidance to ensure proper handling of potentially contaminated materials and will be mitigated as noted in the "Contamination" section above. Demolition and construction activity may also result in temporary emissions from vehicle exhaust and fugitive dust emissions from ground disturbance. All activities will comply with the relevant provisions of Section 11-60.1-33, HAR, on fugitive dust. Therefore, the following control measures are recommended to reduce fugitive dust emissions: • The construction contractor shall use water or suitable chemicals to control fugitive dust in the demolition of any existing buildings or structures, construction operations, the grading of roads, or the clearing of land. • The construction contractor shall apply asphalt, water, or suitable chemicals on roads, material stockpiles, and other surfaces which may result in fugitive dust. Ensure an adequate water source exists at the site prior to start-up of construction activities. • The construction contractor shall cover all moving, open-bodied trucks transporting materials which may result in fugitive dust. • The construction contractor shall maintain roadways in a clean manner. • The construction contractor shall promptly remove earth or other materials from paved streets which have been transported there by trucking, earth-moving equipment, erosion, or other means. The following control measures are recommended to reduce pollutant exposure to residences during the construction activities:

Law, Authority, or Factor	Mitigation Measure
	• Staging areas shall be located away from on-site residential land uses to create a buffer and alleviate potential nuisance problems. • On-site electricity shall be obtained from the electrical grid rather than temporary diesel or gasoline generators. • Equipment and vehicle engines shall be maintained in good condition and in proper tune per manufacturers' specifications. • All construction equipment and delivery vehicles shall be turned off when not in use or prohibit idling in excess of five minutes. Haul trucks in particular that stage waiting to be called to remove dirt from the site shall not be allowed to idle while queuing. • Additional care should be taken by contractors to minimize fugitive dust from materials being hauled to or away from the project site and mud and debris tracked onto adjacent roadways. • Contractors should also develop a dust control management plan for the different phases of construction, focusing on minimizing the amount of dust-generating materials and activities, centralizing on-site vehicular traffic routes, and locating potential dust-generating equipment in areas of the least impact. • Provide adequate dust control measures during weekends, after hours, and prior to daily start-up of construction activities.
Educational and Cultural Facilities	On-going discussions with the State Department of Education are being held to determine how the proposed project will support public education. As the project moves into design and construction, MWH Partners will continue discussions with the Hawai‘i Department of Education regarding impacts on student relocation and transition during the carious phases of this project. MWH Partners will coordinate with the Hawai‘i Department of Education to execute an educational contribution agreement to satisfy the State's school impact fee requirements.
Solid Waste Disposal and Recycling	The proposed project will support recycling as much as possible for both households and commercial uses as well as green wastes generated onsite. Detailed design will include but not be limited to onsite facilities to support separating wastes into recyclable and non-recyclable materials and for central collection facilities within the buildings. MWH Partners, LLC will also work with the City and contracted collection services to ensure as much recyclable materials are diverted from the waste stream from the project as they will be managing ongoing operations of the site once construction is complete. All remaining non-hazardous waste generated by the project must be disposed of at a solid waste management facility that complies with applicable State regulations of HAR, Chapter 11-58.1. No open burning of wastes either onsite or offsite will be permitted.
Public Safety – Police, Fire and Emergency Medical	Project designers will continue to work closely with City Police, the Honolulu Fire Department, and other public service providers during the detailed design of the facilities to ensure the new structures at MWH will

Law, Authority, or Factor	Mitigation Measure
	be easily accessible by emergency services to support favorable response times.
Transportation and Accessibility	**Vehicle Traffic.** Potential traffic improvements were identified to mitigate the project's cumulative impacts to the 3 intersections operating at undesirable levels of service even under baseline conditions. The emphasis was to identify physical and/or operational improvements that could be implemented within the existing or planned roadway rights-of-way and determine if improvements would be ultimately feasible. Each of the initially identified impacts would be reduced such that future plus project operations would be better than baseline conditions. Mitigation measures are discussed in detail below for each of the 3 intersections as well as their overall feasibility and recommendations for implementation. For the North Vineyard Boulevard and Liliha Street intersection, potential improvements for vehicle operations include the construction of a second Diamond-Head-bound left-turn lane on North Vineyard Boulevard by: • Taking four feet from the existing median; • Reducing the existing Diamond-Head-bound lanes to ten feet for the left-turn lanes; • Reducing the through lanes to eleven feet; and • Reducing the right-turn lanes to thirteen feet to accommodate right-turn buses. This option would address additional vehicle demand from the project and allow for intersections to operate at better than baseline levels in both the AM and PM peak hours. The reduced median strip would still be able to accommodate an ADA-compliant pedestrian refuge area and no sidewalks or adjacent properties would be impacted. Measures to improve vehicle operations at the intersection of North Vineyard Boulevard and A‘ala Street include the restriping of makai-bound lanes on A‘ala Street to provide a separate left-turn lane and a combined through/right-turn lane. This mitigation action is considered feasible since the roadway is a sufficient width to accommodate improvements without impact to bike or pedestrian facilities. The restriping would require the removal of five parking stalls on A‘ala Street, three on the ‘ewa side and two on the Diamond-Head side. These measures would allow the intersection to operate at a desirable level of service D in the PM peak period under Long-Term (2028) Full Buildout Conditions, which is assumed to balance out the reduction in on-street parking in the vicinity of the intersection. Due to the new driveway changes on Pua Lane, the following traffic calming enhancements and parking improvements are recommended for consideration:

Law, Authority, or Factor	Mitigation Measure
	• Consider installation of a neighborhood traffic circle at Pua Lane/Kanoa St/Project Makai Driveway - While there are already speed humps on Pua Lane to help moderate vehicle speeds, a neighborhood traffic circle at this intersection would further moderate vehicle speeds on the roadway and reduce the severity of potential collisions. The neighborhood traffic circle would also reduce stopping on Kanoa Street and the project's makai driveway. It should be noted that a neighborhood traffic circle would likely require elimination of several parking spaces on both sides of Pua Lane, mauka and makai of the neighborhood traffic circle. Install Metered Parking on Pua Lane - This modification would promote frequent turnover of parked vehicles on Pua Lane and would have to be implemented by the City & County of Honolulu Department of Transportation Services. The metered parking could be enforced only during typical daytime hours (e.g. 8 AM to 6 PM), so that in the evening, area residents or guests could park on Pua Lane for longer periods of time. • Install bicycle sharrows on Pua Lane and Kanoa Street - this would highlight the presence of bicyclists on this street and inform motorists traveling on Pua Lane to share the roadway. This improvement would provide a visual connection to the planned bike facilities on North King Street that are being planned as part of the City & County's Complete Streets project. • Install curb extensions on the makai corners of the N Vineyard Boulevard/Pua Lane intersection - this would increase pedestrian visibility through improved sight lines and also increase the pedestrian waiting space. Additionally, curb extensions would decrease the walking distance for pedestrians crossing Pua Lane. Given that this is improvement is on a State facility, coordination with DOT is required to implement this improvement. All roadway improvements to mitigate impacts will be the responsibility of the project and any improvements to State rights-of-ways must be approved by Hawai‘i Department of Transportation – Highways Division. Mitigation for direct impacts to State roadways are the responsibility of the project while regional improvements will be provided on a pro-rata basis. These improvements shall be constructed on a schedule acceptable to the Hawai‘i Department of Transportation – Highways Division. In addition to roadway improvements to accommodate additional vehicle demand, the proposed project could implement transportation demand management strategies to reduce overall site-generated traffic volumes. Application of transportation demand strategies that could lead to vehicle trip reduction, use of alternative modes, and better traffic management at the site could include, but are not limited to:

Law, Authority, or Factor	Mitigation Measure
	• Implementation of a detailed transportation demand program for residents and retail employees, which would be managed by a transportation demand coordinator who would organize and coordinate monitoring efforts, parking and traffic management plans, and the implementation of transportation demand and recommendations and modifications. • Provision of a transportation kiosk and on-line portal for information on ride-sharing, transit, bicycling, walking, and options for accessing the site without using a private automobile. • Partial- or fully-subsidized transit passes for on-site employees and/or residents. • Bike share, carpooling, and ride sharing programs. • Provision of secure and convenient bicycle racks adjacent to retail development, at communal open space, and residential buildings within the project site. • Unbundling parking from apartment units to reduce rental costs for some units and to incentivize use of non-auto travel modes. Prior to the implementation of any transportation demand measures, the project team will coordinate with the City and/or transit service providers. Short-term traffic impacts will result during construction for both onsite and offsite improvements. Traffic may be impacted when materials and equipment are transported to the site. Prior to construction being initiated on the Mayor Wright site, the project will prepare a construction traffic management plan (CTMP) to address how trucks and construction worker traffic will access and circulate around the project site. The current conditions on streets fronting the site at the time project construction is initiated will be used to make recommendations on construction traffic circulation, time periods to avoid, and other management strategies. The CTMP will be made available for review and comment by City and County Department of Planning and Permitting (DPP) and State of Hawai‘i Department of Transportation – Highways Division (HDOT-HWY) staff because both agencies will need to authorize encroachment and/or building-related permits. At that time, the project contractor will work with the affected agencies and coordinate with stakeholders to minimize construction traffic impacts, identify any potential circulation issues, and implement strategies to reduce or eliminate impacts. The conceptual master plan will continue to be refined and a construction traffic management plan based on the updated plan will be developed. Ingress and egress from the site will be based upon minimizing impacts to public traffic and the surrounding areas. It will detail any road or lane closures and potential impacts to any of the bus stops should they be required, and the construction team will work closely with the State and City on appropriate solutions to mitigate those impacts. If there is a need to temporarily relocate any bus stops, the area should be at least 150 feet in

Law, Authority, or Factor	Mitigation Measure
	length to accommodate two 60-foot buses and will be coordinated with the Department of Transportation Services Public Transit Division. The Department of Transportation Services also recommends that construction materials and equipment be transferred to and from the project site during off-peak traffic hours (8:30 a.m. to 3:30 p.m.) as well as other best practice traffic management plans to minimize any possible disruption to pedestrians and traffic on the local streets and project driveways. Proposed improvements affecting the surrounding city and state road rights-of-way include new private driveway and sidewalk connections and underground and overhead utility infrastructure. The proposed underground utility infrastructure includes gravity sewer and water service improvements within Pua Lane, N. King Street and Liliha Street. Underground electrical primary distribution facilities are proposed within N. King Street as well as Liliha Street and Dillingham Boulevard. Permit requests to work within State and City rights-of-way will be sumbitted as required. Construction plans will be prepared by engineers licensed in the State of Hawai‘i and submitted to the HDOT Highways Division and to DPP for approval. HDOT Use and Occupancy Permits will be obtained for the improvements within state rights-of-way. The project team will collaborate with the Honolulu Police Department, the Department of Transportation Services to determine the optimum locations for entering and exiting the site during construction activities. The Honolulu Police Department and the Department of Transportation Services will be provided traffic plans prior to the start of construction once finalized with their input. Traffic plans will indicate the use of traffic controls (signage, coning, etc.), flag persons and off-duty officers as required. Per Honolulu Police Department’s recommendation, all necessary signs, lights, barricades, and other safety equipment will be installed and maintained by the contractor during the construction phase of the project. Prior to the commencement of construction, a pre-construction conference with subcontractors and suppliers will be held to communicate the traffic plan to all traveling and delivering material to the site. Safety orientations for all personnel working onsite will be held to educate them on the proper procedures for entering and exiting the site. Construction schedules should also be coordinated with other nearby properties that may have planned improvements to minimize potential impacts on adjacent streets wherever feasible. In addition, updates regarding potential traffic impacts during construction will be given to the public via media outreach and the project website. Direct updates can also be sent via email or other electronic methods as preferred to area residents, businesses, schools, City and State officials, emergency personnel, O‘ahu Transit Services, and others. Regular updates will also be shared at the monthly Kalihi-Pālama Neighborhood Board meetings.

Law, Authority, or Factor	Mitigation Measure
	Once construction commences, approved best management practices to control the release of sediment and other pollutants on area roadways must be installed to the satisfaction of the authority having jurisdiction. A National Pollutant Discharge Elimination System permit will also be submitted to the State Department of Health for approval, which will include a discussion of the best management practices proposed at the time of construction. Also, prior to completion of the project, any damages or deficiencies to the affected rights-of-ways caused by the project must be corrected to City and State standards and accepted by the City and State. These requirements will be incorporated into the construction documents. **Public Transportation.** The project team will coordinate with the Department of Transportation Services Public Transit Division to ensureire the project does not adversely affect public transit services including bus operations, bus routes, bus stops, and paratransit operations. Project plans will be submitted to the Department of Transportation Services Public Transit Division for review and approval. Short-term impacts to the bus stops directly adjacent to the site may occur during construction should there be any road or lane closures. Bus stops may have to be temporarily relocated away from construction activities impacting the fronting the property and the development team will work closely with City transit officials to provide safe alternatives for the bus stops. This will include safe pedestrian and ADA-accessible access to the temporarily relocated bus stops and full replacement of the bus stop once construction is complete. If there is a need to temporarily relocate any bus stops, the area should be at least 150 feet in length to accommodate two 60-foot buses and will be coordinated with the Department of Transportation Services Public Transit Division. **Pedestrian Facilities.** The multimodal transportation assessment also recommends pedestrian safety enhancements to the surrounding streets as part of the proposed project's mitigation measures that are currently required even without the proposed project at two intersections: • North King Street/Dillingham Boulevard/Liliha Street: Install Leading Pedestrian Intervals at all crosswalks. Leading Pedestrian Intervals give pedestrians a few seconds head start (typically three to seven seconds) when entering an intersection with the corresponding green signal. Relocate the existing signal box and signal pole on the mauka-‘ewa corner of North King Street/Liliha Street to behind (i.e. ‘ewa side) of the crosswalk. Straighten the makai crosswalk across Dillingham Boulevard and move the vehicle stop bar approximately fifteen feet back to straighten the skewed crosswalk and shorten the crossing distance for pedestrians by ten feet.

Law, Authority, or Factor	Mitigation Measure
	• North Vineyard Boulevard/Liliha Street: Install Leading Pedestrian Intervals at all crosswalks. Relocate all pedestrian push buttons so that they are within ten feet from the curb ramp.
Vegetation, Wildlife	Although no Federal or State of Hawai‘i listed Threatened, Endangered, or Candidate plant or wildlife species or their habitats were found on the site, U.S. Fish & Wildlife Service data indicates that the following federally listed species may occur or transit through the vicinity of the proposed project area: endangered Hawaiian hoary bat (*Lasiurus cinereus semotus*); endangered Hawaiian petrel (*Pterodroma sandwichensis*), threatened Newell's shearwater (*Puffinus auricularis newelli*), and endangered Hawai‘i Distinct Population Segment (DPS) of the band-rumped storm-petrel (*Oceanodroma castro*). The proposed project will minimize potential threats to native endangered and threatened seabirds and endangered Hawaiian hoary bats that may fly over the project by applying the following measures: <u>*Hawaiian hoary bat*</u> The Hawaiian hoary bat roosts in both exotic and native woody vegetation across all islands and will leave young unattended in trees and shrubs when they forage. If trees or shrubs 15 feet or taller are cleared during the pupping season, there is a risk that young bats could inadvertently be harmed or killed since they are too young to fly or may not move away. To avoid and minimize impacts to the endangered Hawaiian hoary bat we recommend you consider incorporating the following applicable measures into your project description: • Do not disturb, remove, or trim woody plants greater than 15 feet tall during the bat birthing and pup rearing season (June 1 through September 15). • Do not use barbed wire for fencing. <u>*Hawaiian seabirds*</u> Hawaiian seabirds may traverse the project area at night during the breeding, nesting and fledging seasons (March 1 to December 15). Outdoor lighting could result in seabird disorientation, fallout, and injury or mortality. Seabirds are attracted to lights and after circling the lights they may become exhausted and collide with nearby wires, buildings, or other structures or they may land on the ground. Downed seabirds are subject to increased mortality due to collision with automobiles, starvation, and predation by dogs, cats, and other predators. Young birds (fledglings) traversing the project area between September 15 and December 15, in their first flights from their mountain nests to the sea, are particularly vulnerable. To avoid and minimize potential project impacts to seabirds we recommend you incorporate the following applicable measures into your project description:

Law, Authority, or Factor	Mitigation Measure
	• Fully shield all outdoor lights so the bulb can only be seen from below bulb height and only use when necessary. • Install automatic motion sensor switches and controls on all outdoor lights or turn off lights when human activity is not occurring in the lighted area. • Avoid nighttime construction during the seabird fledging period, September 15 through December 15. In addition, measures will be taken to minimize any potential impacts to the endangered manu o kū or white tern (*Gygis alba rothschildi*) as their range and nesting area in urban Honolulu is growing according to the State Department of Land and Natural Resources, Department of Forestry and Wildlife. The project is also proposing to install more trees along the streets and within the project site, which may encourage the area's use by the manu o kū. The following protocols for surveying trees for the manu o kū and their eggs will be followed prior to tree trimming or removal by the proposed project's development and management team: • If there are no known manu o kū nests in the project area when work on any trees commences, then a quick survey of the trees should still be done before proceeding with any tree trimming or removal. The Department of Forestry and Wildlife O‘ahu Branch Wildlife Program should be contacted if there are any manu o kū or eggs seen onsite prior to the commencement of work. • If there are known manu o kū nests in the project area at the time when project work commences, a qualified individual (e.g., wildlife biologist) should make a more in-depth assessment and provide a timeframe in which tree trimming or removal can be done. Any tree trimming or tree removal work should proceed outside the nesting period, which can occur year-round. Therefore, site-specific monitoring should be done prior to any work on impacted trees.

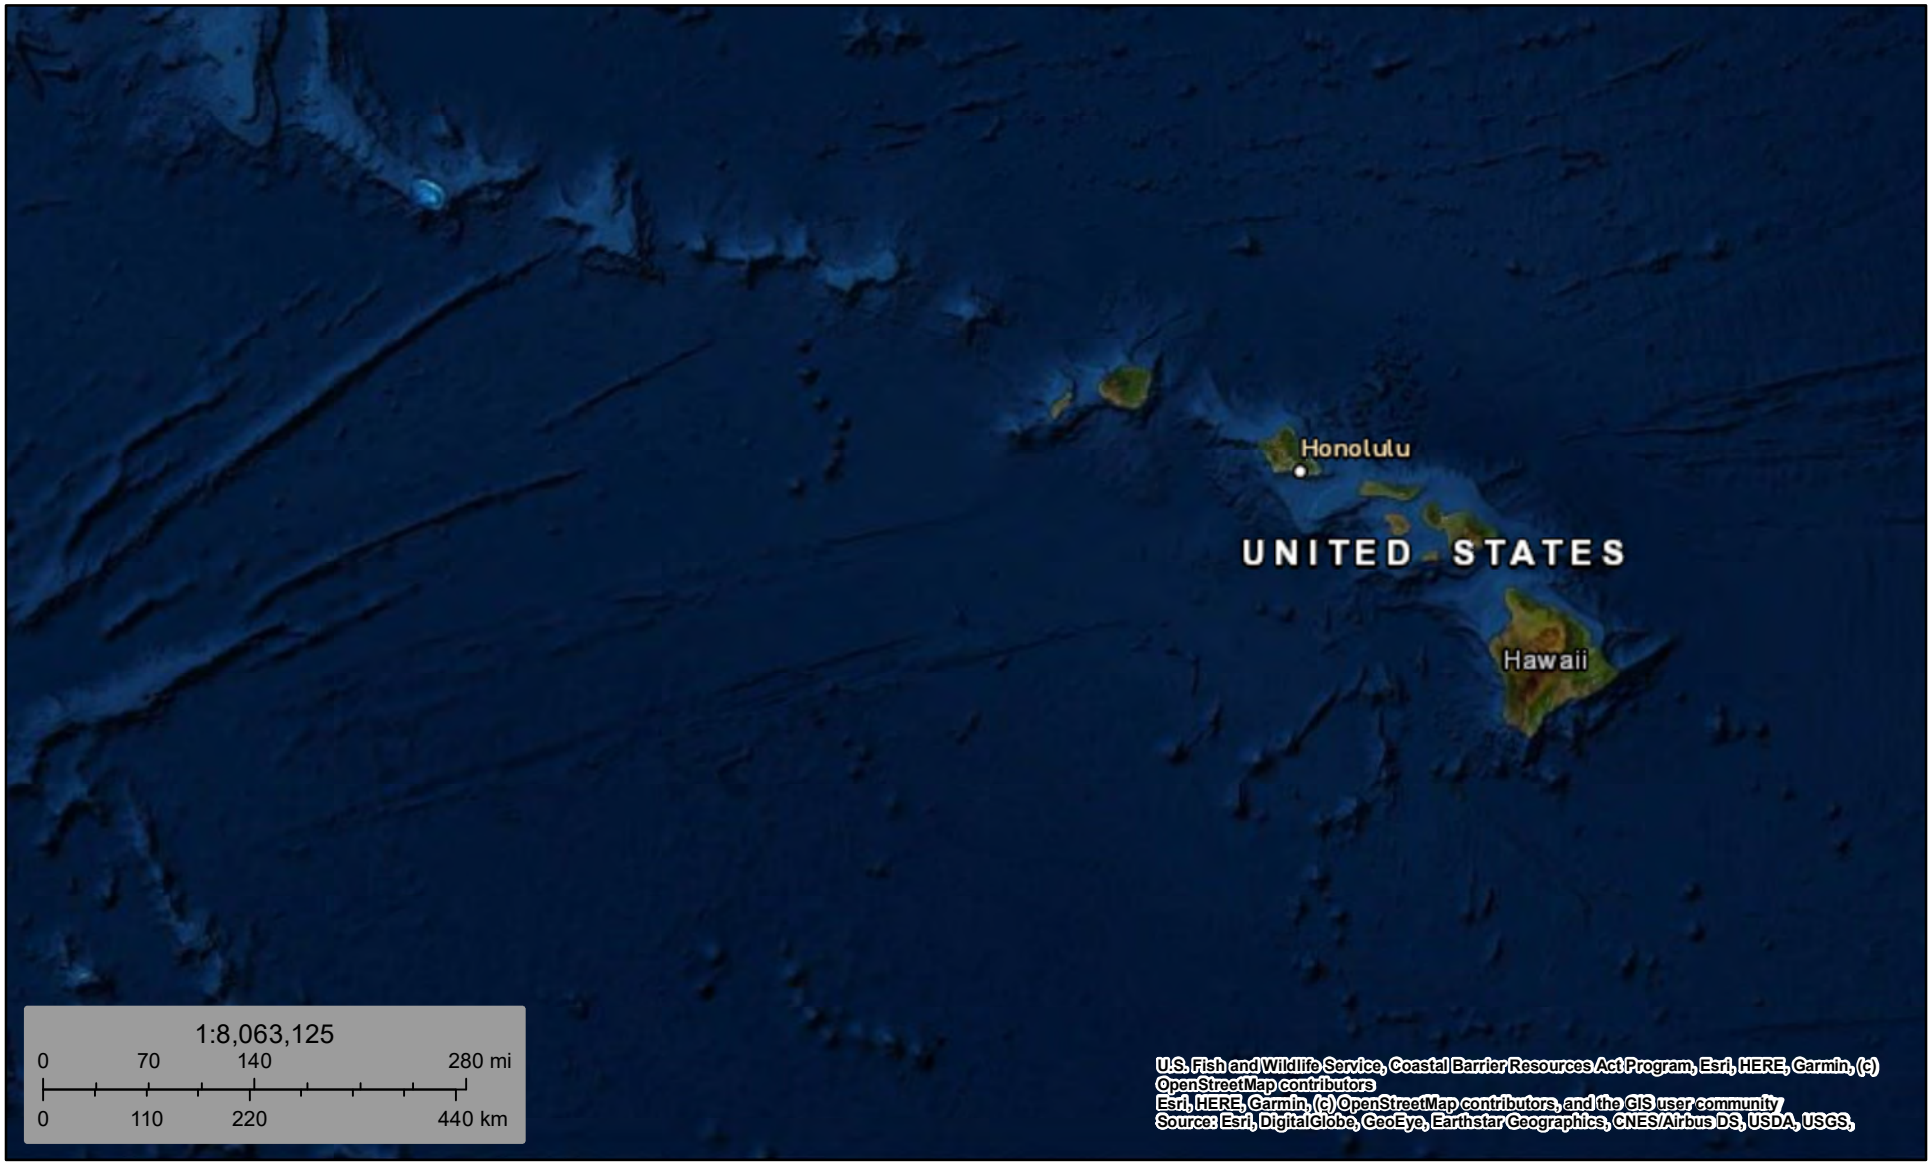
EXHIBIT 1

U.S. Fish and Wildlife Service

Coastal Barrier Resources System

CBRS Hawai‘i



December 4, 2019

CBRS Units

This map is for general reference only. The Coastal Barrier Resources System (CBRS) boundaries depicted on this map are representations of the controlling CBRS boundaries, which are shown on the official maps, accessible at https://www.fws.gov/cbra/maps/index.html. All CBRS related data should be used in accordance with the layer metadata found on the CBRS Mapper website.

The CBRS Buffer Zone represents the area immediately adjacent to the CBRS boundary where users are advised to contact the Service for an official determination (http://www.fws.gov/cbra/Determinations.html) as to whether the property or project site is located "in" or "out" of the CBRS.

CBRS Units normally extend seaward out to the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward extent of the units is not shown in the CBRS mapper.

Flood Legend

ZONE AE — SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD
Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

ZONE X — OTHER FLOOD AREAS
Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

ZONE X
ZONE D — OTHER AREAS
Areas determined to be outside the 0.2% annual chance floodplain.
Areas in which flood hazards are undetermined, but possible.

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

1% annual chance floodplain boundary

0.2% annual chance floodplain boundary

Viewers/Users are responsible for verifying the accuracy of the information and agree to indemnify the DLNR, its officers, and employees from any liability which may arise from its use of its data or information.

If this map has been identified as 'PRELIMINARY', please note that it is being provided for informational purposes and is not to be used for flood insurance rating. Contact your county floodplain manager for flood zone determinations to be used for compliance with local floodplain management regulations.

FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND
(*Note: legend does not correspond with NFHL)*

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100-year), also know as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHAs include Zone A, AE, AH, AO, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.
	Zone AE: BFE determined.
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.
	Zone AO: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.
	Zone V: Coastal flood zone with velocity hazard (wave action); no BFE determined.
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.
	Zone AEF: Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

	Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
	Zone X: Areas determined to be outside the 0.2% annual chance floodplain.

OTHER FLOOD AREAS

	Zone D: Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase apply, but coverage is available in participating communities.

Federal Emergency Management Agency

Washington, D.C. 20472

November 4, 2014

IN REPLY REFER TO:
LOMC-VALID

The Honorable Kirk Caldwell
Mayor, City and County of Honolulu
530 South King Street, Room 306
Honolulu, Hawaii 96813

Case Number: 11-09-0878V
Community: City and County of Honolulu, HI
Community No.: 150001
Effective Date: November 6, 2014

CORRECTED COPY

Dear Mayor Caldwell:

On November 5, 2014, the Department of Homeland Security's Federal Emergency Management Agency (FEMA) issued new or revised Flood Insurance Rate Map (FIRM) panels within your community. This letter identifies the Letter of Map Change (LOMC) actions [i.e., Letters of Map Revision-based on Fill (LOMR-Fs) and Letters of Map Amendment (LOMAs)] for properties and/or structures located in your community that are still valid as of the effective date shown above. These LOMCs will remain in effect until superseded by a subsequent LOMC or by a revision to the FIRM panel on which the property and/or structure is located. The enclosed table lists the FEMA case number, issue date, project identifier, and amended FIRM panel number for the LOMCs revalidated by this letter.

All effective LOMCs within your community have been reviewed, including LOMCs located on panels not revised during this FIRM update. Any revalidation letters previously issued for your community have been superseded as of the effective date listed above. LOMAs and LOMR-Fs for which the original determination has not been superseded by new or revised information, and are able to be administratively revalidated, are included in the enclosed table. Please refer to the original determination document to obtain the details of the outcome for the properties and/or structures included in the determination (such as flood zone, base flood elevations, property elevations, etc).

LOMRs cannot be administratively revalidated. LOMRs previously issued for FIRM panels that were revised by the recent map update for your community have either been incorporated into the revised FIRM or have been superseded by the revised FIRM. LOMRs issued for FIRM panels that were not revised by the recent map update for your community are not included on the enclosed table and will remain in effect until superseded by a revision to that FIRM panel.

If there is a LOMC not on the enclosed list that you feel should have been revalidated, we encourage you to submit the LOMC for re-determination. When requesting a re-determination, we ask that a cover letter be sent along with a copy of the original determination letter to: LOMC Clearinghouse, 847 South Pickett Street, Alexandria, Virginia 22304-4605.

Because these revalidated LOMCs will not be reprinted or distributed to primary map users, such as local insurance agents and mortgage lenders, your community will serve as a repository for this information. We encourage you to disseminate the information reflected by this LOMC-VALID letter throughout your community so that interested persons, such as property owners, local insurance agents, and mortgage lenders, may benefit from the information.

This LOMC-VALID letter is considered legally binding, in the same manner as the original LOMC, as long as a copy of the original LOMC determination accompanies the LOMC-VALID letter. Copies of previously issued LOMCs, if needed, may be obtained from your community's map repository, FEMA's Map Service Center website located at https://msc.fema.gov, or by contacting the FEMA Map Information eXchange (FMIX), toll free, at 1-877-FEMA-MAP (1-877-336-2627).

For additional information or questions relating to LOMCs not listed on the enclosed table, or mapping in general, please contact the FMIX at the number provided above.

Sincerely,

Luis Rodriguez, P.E., Chief
Engineering Management Branch
Federal Insurance and Mitigation Administration

List of Exceedances of the National Ambient Air Quality Standards

The Hawai'i State Department of Health is required to notify the public whenever the National Ambient Air Quality Standards (NAAQS) are exceeded. The list below shows the most recent exceedances due to an exceptional or natural event. For a listing of previous exceedances through 2013, please see the Department of Health, Clean Air Branch web page.

DATE	MONITORING STATION LOCATION & ISLAND	AIR POLLUTANT	STANDARD TYPE	STANDARD LIMIT	ACTUAL	CAUSE
Dec. 31, 2014	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.111 ppm (2-3 a.m.)	volcanic emissions
Dec. 31, 2014	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.107 ppm (9-10 a.m.)	volcanic emissions
Dec. 31, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.169 ppm (7-8 a.m.)	volcanic emissions
Dec. 30, 2014	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.331 ppm (6-7 a.m.)	volcanic emissions
Dec. 30, 2014	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.362 ppm (5-6 a.m.)	volcanic emissions
Dec. 29, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.150 ppm (11 a.m.-noon)	volcanic emissions
Dec. 27, 2014	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.094 ppm (4-5 a.m.)	volcanic emissions
Dec. 27, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.078 ppm (3-4 a.m.)	volcanic emissions
Dec. 26, 2014	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.155 ppm (6-7 a.m.)	volcanic emissions
Dec. 26, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.241 ppm (2-3 a.m.)	volcanic emissions
Dec. 23, 2014	Puna, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.106 ppm (4-5 p.m.)	volcanic emissions
Dec. 22, 2014	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.119 ppm (9-10 a.m.)	volcanic emissions
Dec. 22, 2014	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.111 ppm (7-8 a.m.)	volcanic emissions
Dec. 22, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.089 ppm (9-10 a.m.)	volcanic emissions
Dec. 21, 2014	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.136 ppm (7-8 a.m.)	volcanic emissions
Dec. 21, 2014	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.082 ppm (midnight-1 a.m.)	volcanic emissions
Dec. 21, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.239 ppm (3-4 a.m.)	volcanic emissions
Dec. 20, 2014	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.124 ppm (6-7 a.m.)	volcanic emissions
Dec. 20, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.318 ppm (2-3 a.m.)	volcanic emissions

Jan. 3, 2014	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.108 ppm (5-6 p.m.)	volcanic emissions
Jan. 3, 2014	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.451 ppm (9-10 a.m.)	volcanic emissions

ppm = unit of the standard is in parts per million
$\mu g/m^3$ = unit of the standard is in micrograms per cubic meter of air

List of Exceedances of the National Ambient Air Quality Standards

The Hawai'i State Department of Health is required to notify the public whenever the National Ambient Air Quality Standards (NAAQS) are exceeded. The list below shows the most recent exceedances due to an exceptional or natural event. For a listing of previous exceedances through 2014, please see the Department of Health, Clean Air Branch web page at http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/.

DATE	MONITORING STATION LOCATION & ISLAND	AIR POLLUTANT	STANDARD TYPE	STANDARD LIMIT	ACTUAL	CAUSE
Dec. 31, 2015	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.112 ppm (7-8 a.m.)	volcanic emissions
Dec. 31, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.223 ppm (7-8 a.m.)	volcanic emissions
Dec. 30, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.110 ppm (noon-1 p.m.)	volcanic emissions
Dec. 29, 2015	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.269 ppm 8-9 a.m.)	volcanic emissions
Dec. 29, 2015	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.180 ppm (5-6 a.m.)	volcanic emissions
Dec. 29, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.246 ppm (5-6 a.m.)	volcanic emissions

Jan. 15, 2015	Hilo, Hawaii	SO_2	24-hour avg. 1-hour avg.	0.14 ppm 0.075 ppm	0.16 ppm 0.640 ppm (1-2 a.m.)	volcanic emissions
Jan. 15, 2015	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.329 ppm (6-7 a.m.)	volcanic emissions
Jan. 14, 2015	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.087 ppm (9-10 a.m.)	volcanic emissions
Jan. 14, 2015	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.150 ppm (8-9 a.m.)	volcanic emissions
Jan. 13, 2015	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.347 ppm (9-10 a.m.)	volcanic emissions
Jan. 13, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.252 ppm (8-9 a.m.)	volcanic emissions
Jan. 12, 2015	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.500 ppm (5-6 a.m.)	volcanic emissions
Jan. 12, 2015	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.310 ppm (5-6 a.m.)	volcanic emissions
Jan. 11, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.487 ppm (9-10 a.m.)	volcanic emissions
Jan. 10, 2015	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.121 ppm (11 a.m.-noon)	volcanic emissions
Jan. 10, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.315 ppm (4-5 a.m.)	volcanic emissions
Jan. 9, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.369 ppm (8-9 a.m.)	volcanic emissions
Jan. 8, 2015	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.118 ppm (8-9 a.m.)	volcanic emissions
Jan. 8, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.313 ppm (8-9 a.m.)	volcanic emissions
Jan. 7, 2015	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.099 ppm (10-11 a.m.)	volcanic emissions
Jan. 6, 2015	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.236 ppm (8-9 a.m.)	volcanic emissions
Jan. 6, 2015	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.133 ppm (8-9 a.m.)	volcanic emissions
Jan. 3, 2015	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.076 ppm (1-2 a.m.)	volcanic emissions

ppm = unit of the standard is in parts per million
$\mu g/m^3$ = unit of the standard is in micrograms per cubic meter of air

List of Exceedances of the National Ambient Air Quality Standards

The Hawai'i State Department of Health is required to notify the public whenever the National Ambient Air Quality Standards (NAAQS) are exceeded. The list below shows the most recent exceedances due to an exceptional or natural event. For a listing of previous exceedances through 2015, please see the Department of Health, Clean Air Branch web page at http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/.

DATE	MONITORING STATION LOCATION & ISLAND	AIR POLLUTANT	STANDARD TYPE	STANDARD LIMIT	ACTUAL	CAUSE
Dec. 31, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.118 ppm (9-10 p.m.)	volcanic emissions
Dec. 30, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.135 ppm (9-10 a.m.)	volcanic emissions
Dec. 30, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.107 ppm (1-2 a.m.)	volcanic emissions
Dec. 29, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.112 ppm (7-8 a.m.)	volcanic emissions
Dec. 28, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.079 ppm (1-2 p.m.)	volcanic emissions
Dec. 28, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.076 ppm (2-3 a.m.)	volcanic emissions
Dec. 27, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.446 ppm (8-9 a.m.)	volcanic emissions
Dec. 25, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.154 ppm (9-10 a.m.)	volcanic emissions
Dec. 25, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.219 ppm (10-11 p.m.)	volcanic emissions
Dec. 24, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.077 ppm (midnight-1 a.m.)	volcanic emissions
Dec. 23, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.214 ppm (5-6 a.m.)	volcanic emissions
Dec. 20, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.287 ppm (8-9 a.m.)	volcanic emissions
Dec. 19, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.107 ppm (7-8 p.m.)	volcanic emissions
Dec. 19, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.172 ppm (1-2 a.m.)	volcanic emissions
Dec. 18, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.203 ppm (11 p.m.-midnight)	volcanic emissions
Dec. 15, 2016	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.103 ppm (9-10 a.m.)	volcanic emissions
Dec. 14, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.228 ppm (1-2 a.m.)	volcanic emissions
Dec. 14, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.154 ppm (noon-1 p.m.)	volcanic emissions
Dec. 9, 2016	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.164 ppm (11 a.m.-noon)	volcanic emissions
Dec. 3, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.084 ppm (1-2 a.m.)	volcanic emissions
Dec. 3, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.120 ppm (2-3 a.m.)	volcanic emissions
Dec. 2, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.408 ppm (8-9 p.m.)	volcanic emissions
Dec. 2, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.284 ppm (8-9 p.m.)	volcanic emissions
Dec. 1, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.240 ppm (1-2 p.m.)	volcanic emissions
Nov. 30, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.101 ppm (2-3 p.m.)	volcanic emissions
Nov. 30, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.297 ppm (2-3 p.m.)	volcanic emissions
Nov. 29, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.203 ppm (11 a.m.-noon)	volcanic emissions

Nov. 29, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.406 ppm (10-11 a.m.)	volcanic emissions
Nov. 28, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.195 ppm (10-11 a.m.)	volcanic emissions
Nov. 28, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.282 ppm (1-2 a.m.)	volcanic emissions
Nov. 27, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.190 ppm (5-6 p.m.)	volcanic emissions
Nov. 27, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.360 ppm (11 p.m.-midnight)	volcanic emissions
Nov. 26, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.099 ppm (midnight-1 a.m.)	volcanic emissions
Nov. 26, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.748 ppm (8-9 a.m.)	volcanic emissions
Nov. 25, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.103 ppm (10-11 a.m.)	volcanic emissions
Nov. 25, 2016	Pahala, Hawaii	SO_2	24-hour avg. 1-hour avg.	0.14 ppm 0.075 ppm	0.17 ppm 0.460 ppm (10-11 a.m.)	volcanic emissions
Nov. 24, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.116 ppm (noon-1 p.m.)	volcanic emissions
Nov. 24, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.347 ppm (noon-1 p.m.)	volcanic emissions
Nov. 23, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.216 ppm (1-2 a.m.)	volcanic emissions
Nov. 22, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.159 ppm (11 a.m.-noon)	volcanic emissions
Nov. 22, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.287 ppm (1-2 a.m.)	volcanic emissions
Nov. 21, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.210 ppm (7-8 p.m.)	volcanic emissions
Nov. 20, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.105 ppm (4-5 a.m.)	volcanic emissions
Nov. 20, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.285 ppm (6-7 p.m.)	volcanic emissions
Nov. 19, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.101 ppm (7-8 p.m.)	volcanic emissions
Nov. 19, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.464 ppm (1-2 a.m.)	volcanic emissions
Nov. 18, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.167 ppm (8-9 a.m.)	volcanic emissions
Nov. 18, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.199 ppm (2-3 a.m.)	volcanic emissions
Nov. 17, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.532 ppm (5-6 a.m.)	volcanic emissions
Nov. 17, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.411 ppm (9-10 a.m.)	volcanic emissions

Jan. 9, 2016	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.175 ppm (6-7 a.m.)	volcanic emissions
Jan. 8, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.240 ppm (2-3 a.m.)	volcanic emissions
Jan. 8, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.090 ppm (3-4 a.m.)	volcanic emissions
Jan. 7, 2016	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.145 ppm (midnight-1 a.m.)	volcanic emissions
Jan. 7, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.078 ppm (10-11 p.m.)	volcanic emissions
Jan. 7, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.076 ppm (midnight-1 a.m.)	volcanic emissions
Jan. 6, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.080 ppm (7-8 a.m.)	volcanic emissions
Jan. 5, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.337 ppm (3-4 a.m.)	volcanic emissions
Jan. 4, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.337 ppm (9-10 a.m.)	volcanic emissions
Jan. 3, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.126 ppm (3-4 a.m.)	volcanic emissions
Jan. 3, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.381 ppm (10-11 a.m.)	volcanic emissions
Jan. 2, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.299 ppm (1-2 a.m.)	volcanic emissions
Jan. 1, 2016	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.117 ppm (9-10 a.m.)	volcanic emissions
Jan. 1, 2016	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.143 ppm (9-10 a.m.)	volcanic emissions

ppm = unit of the standard is in parts per million
$\mu g/m^3$ = unit of the standard is in micrograms per cubic meter of air

List of Exceedances of the National Ambient Air Quality Standards

The Hawai'i State Department of Health is required to notify the public whenever the National Ambient Air Quality Standards (NAAQS) are exceeded. The list below shows the most recent exceedances due to an exceptional or natural event. For a listing of previous exceedances through 2016, please see the Department of Health, Clean Air Branch web page at http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/.

DATE	MONITORING STATION LOCATION & ISLAND	AIR POLLUTANT	STANDARD TYPE	STANDARD LIMIT	ACTUAL	CAUSE
Dec. 31, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.116 ppm (8-9 a.m.)	volcanic emissions
Dec. 31, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.339 ppm (9-10 a.m.)	volcanic emissions
Dec. 29, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.114 ppm (9-10 a.m.)	volcanic emissions
Dec. 29, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.125 ppm (7-8 a.m.)	volcanic emissions
Dec. 28, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.176 ppm (9-10 a.m.)	volcanic emissions
Dec. 26, 2017	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.103 ppm (10-11 a.m.)	volcanic emissions
Dec. 25, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.316 ppm (6-7 a.m.)	volcanic emissions
Dec. 25, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.264 ppm (7-8 a.m.)	volcanic emissions
Dec. 24, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.121 ppm (10-11 a.m.)	volcanic emissions
Dec. 24, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.183 ppm (7-8 a.m.)	volcanic emissions
Dec. 23, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.161 ppm (10-11 a.m.)	volcanic emissions
Dec. 22, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.081 ppm (8-9 a.m.)	volcanic emissions
Dec. 21, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.139 ppm (10-11 a.m.)	volcanic emissions
Dec. 21, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.102 ppm (10-11 a.m.)	volcanic emissions
Dec. 19, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.120 ppm (noon-1 a.m.)	volcanic emissions
Dec. 14, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.207 ppm (1-2 p.m.)	volcanic emissions
Dec. 12, 2017	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.114 ppm (8-9 a.m.)	volcanic emissions
Dec. 11, 2017	Hilo, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.131 ppm (9-10 a.m.)	volcanic emissions
Dec. 11, 2017	Mountain View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.126 ppm (7-8 a.m.)	volcanic emissions
Dec. 11, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.106 ppm (2-3 a.m.)	volcanic emissions
Dec. 10, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.175 ppm (10-11 a.m.)	volcanic emissions
Dec. 10, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.218 ppm (6-7 a.m.)	volcanic emissions
Dec. 9, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.125 ppm (11 p.m.-midnight)	volcanic emissions
Dec. 8, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.251 ppm (5-6 a.m.)	volcanic emissions
Dec. 8, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.182 ppm (9-10 a.m.)	volcanic emissions
Dec. 7, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.175 ppm (9-10 a.m.)	volcanic emissions

Dec. 6, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.158 ppm (10-11 a.m.)	volcanic emissions
Dec. 5, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.100 ppm (midnight-1 a.m.)	volcanic emissions
Dec. 4, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.121 ppm (11 a.m.-noon)	volcanic emissions
Dec. 4, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.321 ppm (10-11 a.m.)	volcanic emissions
Dec. 3, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.115 ppm (3-4 p.m.)	volcanic emissions
Dec. 2, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.109 ppm (2-3 p.m.)	volcanic emissions
Dec. 1, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.193 ppm (3-4 a.m.)	volcanic emissions
Dec. 1, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.079 ppm (1-2 a.m.)	volcanic emissions
Nov. 30, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.138 ppm (7-8 p.m.)	volcanic emissions
Nov. 29, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.095 ppm (8-9 a.m.)	volcanic emissions
Nov. 29, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.086 ppm (3-4 p.m.)	volcanic emissions
Nov. 27, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.181 ppm (4-5 a.m.)	volcanic emissions
Nov. 26, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.674 ppm (4-5 p.m.)	volcanic emissions
Nov. 25, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.215 ppm (5-6 p.m.)	volcanic emissions
Nov. 24, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.085 ppm (5-6 p.m.)	volcanic emissions
Nov. 23, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.088 ppm (9-10 a.m.)	volcanic emissions
Nov. 23, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.094 ppm (9-10 a.m.)	volcanic emissions
Nov. 22, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.151 ppm (8-9 a.m.)	volcanic emissions
Nov. 17, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.101 ppm (9-10 a.m.)	volcanic emissions
Nov. 16, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.648 ppm (6-7 p.m.)	volcanic emissions
Nov. 15, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.155 ppm (2-3 p.m.)	volcanic emissions
Nov. 14, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.079 ppm (11 a.m.-noon)	volcanic emissions
Nov. 14, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.101 ppm (10-11 a.m.)	volcanic emissions
Nov. 12, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.126 ppm (8-9 a.m.)	volcanic emissions
Nov. 10, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.222 ppm (midnight-1 a.m.)	volcanic emissions
Nov. 9, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.142 ppm (9-10 a.m.)	volcanic emissions
Nov. 9, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.514 ppm (10-11 p.m.)	volcanic emissions
Nov. 7, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.170 ppm (1-2 a.m.)	volcanic emissions
Nov. 5, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.113 ppm (5-6 p.m.)	volcanic emissions
Nov. 5, 2017	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.103 ppm (8-9 p.m.)	volcanic emissions
Nov. 4, 2017	Ocean View, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.145 ppm (8-9 a.m.)	volcanic emissions

ppm = unit of the standard is in parts per million
$\mu g/m^3$ = unit of the standard is in micrograms per cubic meter of air

List of Exceedances of the National Ambient Air Quality Standards

The Hawai'i State Department of Health is required to notify the public whenever the National Ambient Air Quality Standards (NAAQS) are exceeded. The list below shows the most recent exceedances due to an exceptional or natural event. For a listing of previous exceedances through 2017, please see the Department of Health, Clean Air Branch web page at http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/.

DATE	MONITORING STATION LOCATION & ISLAND	AIR POLLUTANT	STANDARD TYPE	STANDARD LIMIT	ACTUAL	CAUSE
Aug. 4, 2018	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.106 ppm (3-4 a.m.)	volcanic emissions

Jan. 3, 2018	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.278 ppm (5-6 a.m.)	volcanic emissions
Jan. 2, 2018	Pahala, Hawaii	SO_2	1-hour avg.	0.075 ppm	0.240 ppm (11 p.m.-midnight)	volcanic emissions

ppm = unit of the standard is in parts per million
$\mu g/m^3$ = unit of the standard is in micrograms per cubic meter of air

List of Exceedances of the National Ambient Air Quality Standards

The Hawai'i State Department of Health is required to notify the public whenever the National Ambient Air Quality Standards (NAAQS) are exceeded. The list below shows the most recent exceedances due to an exceptional or natural event. For a listing of previous exceedances through 2018, please see the Department of Health, Clean Air Branch web page at http://health.hawaii.gov/cab/notification-of-exceedance-of-a-national-ambient-air-quality-standard/.

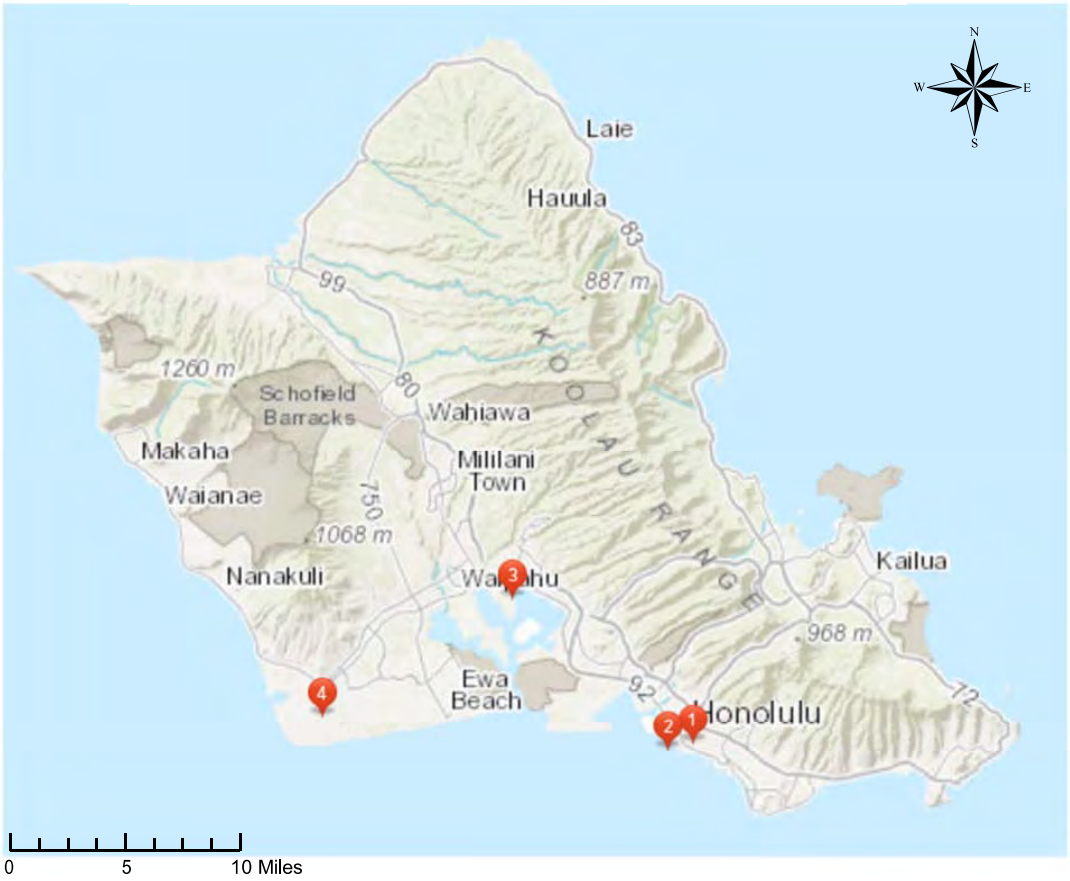
DATE	MONITORING STATION LOCATION & ISLAND	AIR POLLUTANT	STANDARD TYPE	STANDARD LIMIT	ACTUAL	CAUSE
Aug. 1, 2019	Kihei, Hawaii	$PM_{2.5}$	24-hour avg.	35 $\mu g/m^3$	40.5 $\mu g/m^3$	Wild fire

ppm = unit of the standard is in parts per million

$\mu g/m^3$ = unit of the standard is in micrograms per cubic meter of air

Section 3
SITE LOCATIONS AND DESCRIPTIONS

Figure 3-1: Island of Oahu – Air Monitoring Stations



Station	Name	Location	Pollutants/Parameters Monitored
1	Honolulu	1250 Punchbowl St.	CO, SO_2, $PM_{2.5}$, PM_{10}
2	Sand Island	1039 Sand Island Pkwy.	O_3, $PM_{2.5}$
3	Pearl City	860 4th St.	$PM_{2.5}$, PM_{10}
4	Kapolei	2052 Lauwiliwili St.	CO, SO_2, NO_2
	Kapolei NCore	2052 Lauwiliwili St.	CO $_{trace}$, $SO_{2\ trace}$, NO/NO_y , Pb, O_3, $PM_{2.5}$, $PM_{2.5}$ speciation, PM_{10}, $PM_{10-2.5}$, WS/WD

The following station descriptions include latitude and longitude in decimal degrees and altitude in meters above mean sea level.

Section 4
2016 AIR QUALITY DATA

To protect the state's air quality from degradation, the Department of Health's Clean Air Branch is responsible for regulating and monitoring pollution sources to ensure that the levels of criteria pollutants remain well below the state and federal ambient air quality standards. Data collected from the ambient air network is validated by the Air Surveillance and Analysis Section to ensure that the reported data is of good quality and meets all quality control and assurance requirements.

The monitoring stations in communities near the volcano record higher levels of SO_2 and $PM_{2.5}$, with regular exceedances of the NAAQS for SO_2 and occasional exceedances of the NAAQS for $PM_{2.5}$. The EPA considers the volcano a natural, uncontrollable event and therefore the state is requesting exclusion of these NAAQS exceedances from attainment/non-attainment determination.

Excluding the exceedances due to the volcano, in 2016 the State of Hawaii was in attainment of all NAAQS.

Explanation of Summary Tables 4-1 through 4-18:

- Summaries are by pollutant and averaging period, with the number of occurrences exceeding the NAAQS or, in Table 4-17, the number of exceedances of the state H_2S standard (there is no federal H_2S standard);
- The "Maximum" is the highest and second highest valid values recorded in the year for the averaging period. For $PM_{2.5}$, the maximum and 98^{th} percentile concentrations are provided and for O_3, the 4^{th} highest daily maximum value is also displayed;
- The "Annual Mean" is the arithmetic mean of all valid values recorded in the year;
- "Possible Periods" is the total number of possible sampling periods in the year for the averaging period;
- "Valid Periods" is the total number of acceptable sampling periods after data validation;
- "Percent Recovery" represents the amount of quality data reported;
- Attainment with the NAAQS is determined according to 40 CFR 50.

Explanation of Tables 4-19 through 4-29:

- For each pollutant and averaging period, the highest concentration for each month is presented;
- The month with the highest value recorded in the year for each site is highlighted.

Table 4-1. 2016 Summary of the 24-Hour PM_{10} Averages

	Maximum		Annual Mean	No. of 24-hour Averages Greater than 150 µg/m^3													
	1st High	2nd High	All Hours	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Possible Periods	Valid Periods	Percent Recovery
OAHU																		
Honolulu	33	29	13.8	0	0	0	0	0	0	0	0	0	0	0	0	366	335	91.5
Kapolei	35	32	14.0	0	0	0	0	0	0	0	0	0	0	0	0	366	331	95.3
Pearl City	41	39	19.9	0	0	0	0	0	0	0	0	0	0	0	0	366	361	98.6

Table 4-2. Attainment Determination of the 24-Hour PM_{10} NAAQS

Station	Exceedances in 2014	Exceedances in 2015	Exceedances in 2016	Sites in violation of the NAAQS
Honolulu	0	0	0	0
Kapolei	0	0	0	0
Pearl City	0	0	0	0
Attainment: The standard not to be exceeded more than once per year on average over 3 years. **In 2016, Hawaii was in attainment with the 24-hour PM_{10} NAAQS.**				

Table 4-3. 2016 Summary of the 24-Hour $PM_{2.5}$ Averages: SLAMS Stations

	Maximum		Annual Mean	No. of 24-hour Averages Greater than 35 µg/m³														
	1st High	98th %	All Hours	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Possible Periods	Valid Periods	Percent Recovery
OAHU																		
Honolulu	16.2	10.5	2.1	0	0	0	0	0	0	0	0	0	0	0	0	366	335	91.5
Kapolei[1]	15.6	11.0	4.0	0	0	0	0	0	0	0	0	0	0	0	0	366	287	78.4
Pearl City	15.1	11.7	2.6	0	0	0	0	0	0	0	0	0	0	0	0	366	365	99.7
Sand Island	14.7	12.7	4.0	0	0	0	0	0	0	0	0	0	0	0	0	366	358	97.8
MAUI																		
Kihei	47.2	12.1	3.7	0	0	1	0	0	0	0	0	0	0	0	0	366	356	97.3

[1] Does not meet summary criteria, <75% data recovery in one or more quarters

Table 4-4. Attainment Determination of the 24-Hour $PM_{2.5}$ NAAQS: SLAMS Stations

Station	2014 98th value	2015 98th value	2016 98th value	3-Year Average	Sites in violation of the NAAQS
Honolulu	10	10	11	10	0
Kapolei	11	14	11[1]	12	0
Pearl City	10	11	12	11	0
Sand Island	10	12	13	12	0
Kihei	10	13	12	12	0

Attainment: The 3-year average of the 98th percentile values must be less than or equal to 35 µg/m³.
In 2016, Hawaii was in attainment with the 24-hour $PM_{2.5}$ NAAQS.

[1] Does not meet summary criteria, <75% data recovery in one or more quarters.

Table 4-5. Attainment Determination of the Annual $PM_{2.5}$ NAAQS: SLAMS Stations

Station	2014 Ann. Avg.	2015 Ann. Avg.	2016 Ann. Avg.	3-Year Average	Sites in violation of the NAAQS
Honolulu	4.4	3.7	2.1	3.4	0
Kapolei	3.9	4.1	4.0[1]	4.0	0
Pearl City	3.9	5.2	2.6	3.9	0
Sand Island	4.5	5.4	4.0	4.7	0
Kihei	3.9	4.7	3.7	4.1	0

Attainment: The 3-year average of annual mean values must be less than 15 µg/m³.
In 2016, Hawaii was in attainment with the annual $PM_{2.5}$ NAAQS.

[1] Does not meet summary criteria, <75% data recovery in one or more quarters.

Section 6
AMBIENT AIR QUALITY TRENDS

The following graphs illustrate 5-year trends for PM_{10}, $PM_{2.5}$, SO_2, NO_2, O_3, and CO from 2012 to 2016 at all SLAMS stations monitoring for those pollutants.

Figures 6-1 and 6-2 are graphs of the PM_{10} annual and maximum 24-hour averages.

Figure 6-3 is the graph of the $PM_{2.5}$ annual averages. Attainment of the $PM_{2.5}$ 24-hour standard is based on the 98^{th} percentile value at each station, which is depicted in Figure 6-4.

Figures 6-5 and 6-6 are graphs of the SO_2 annual and maximum 24-hour averages.

Figure 6-7 and 6-8 shows the annual and maximum 1-hour averages of NO_2 compared to the federal NAAQS.

Attainment of the 8-hour ozone standard is achieved by averaging 3 years of the fourth highest daily maximum 8-hour average concentrations, which must not exceed 0.070 ppm (standard effective October 1, 2016). Figure 6-9 is a graph of the fourth highest daily maximum values recorded at the Sand Island and Kapolei (since 2011) ozone monitoring stations in the past five years.

The graphs for 1-hour and 8-hour carbon monoxide (figures 6-10 and 6-11, respectively) represent the maximum 1-hour or 8-hour values recorded in the year.

Criteria pollutant levels remain below state and federal ambient air quality standards at all SLAMS stations in the state.

3.0 Detailed Site Descriptions

Following are descriptions and photos of each station in the state's current ambient air monitoring network. The descriptions include area location, traffic, probe siting, monitor information and adherence to quality assurance.

DOH Air Quality Monitoring Section of the State Laboratories Division (AQMS) is the collecting and reporting agency for all stations and monitors operating in the state.

Table 3-1. State of Hawaii Ambient Air Monitoring Network

ID	AQS No.	Site Name	Basic Monitoring Objective(s)[1]	Parameters

1) Public information
2) NAAQS compliance
3) Support research

(DH) HONOLULU			
AQS: 150031001	Type: SLAMS	County: Honolulu	MSA: Honolulu
Address: 1250 Punchbowl St., Honolulu, HI 96813			
Latitude: 21.30758 Longitude: -157.85542			Elevation: 20 m MSL
Location Description: This station is located on the roof of the state Department of Health building in downtown Honolulu. The surrounding streets are busy thoroughfares serving the downtown area. The area includes a major hospital (Queen's Medical Center), the state capitol, other state, county, commercial and business buildings as well as residential condominiums. This station has been operating since 1972.			

DH TRAFFIC DESCRIPTION			
Type of Roadway	Punchbowl	S. Beretania	Vineyard
Freeway			
Major Street or Highway	X	X	X
Distance from air intake (m)	30	122	610
Direction from air inlet	E	S	N
Composition of roadway	asphalt	asphalt	asphalt
Number of traffic lanes	5	6	6
Average daily traffic	35,844[1]	53,046[1]	48,445[1]
Average vehicle speed (est. mph)	20	25	25
Traffic one way or two	2	1	2
Street parking?	No	No	No
[1] Source: State of Hawaii Department of Transportation 2006 count			

For "Site Representativeness" in the following table:

[1]Site Types:
1) located to determine the highest concentrations;
2) located to measure typical concentrations in areas of high population density;
3) located to determine the impact of significant sources or source categories on air quality;
4) located to determine general background concentration levels;
5) located to determine extent of regional pollutant transport among populated areas and in support of secondary standards;
6) located to measure air pollution impacts on visibility, vegetation damage, or other welfare-based impacts

[2] Purposes:
1) Provide air pollution data to the general public in a timely manner;
2) Support compliance with ambient air quality standards;
3) Support emissions strategy development and track trends in air pollution abatement control measures;
4) Support for air pollution research

DATE: February 5, 2019

WITH: John Nakagawa /Hawai'i State Office of Planning, Coastal Zone Management Program

WHEN: February 5, 2019

DISTRIBUTION: File

BY: Jeff Seastrom / PBR HAWAII

SUBJECT: Federal Consistency Review of HUD-Funded Projects

1. The purpose of the phone call was to confirm the Hawai'i Coastal Zone Management Program does not review HUD-Funded Projects for Federal Consistency, as described in the attached letter from the Office of Planning dated June 24, 2004.

2. I confirmed with John Nakagawa, CZM staff that the policy stands. He also referred me to the National Oceanic and Atmospheric Administration (NOAA) website to review State Federal Consistency Lists for the types of federal funding the CZM staff does review at the link below:
https://coast.noaa.gov/czm/consistency/states/

This is our understanding of the topics discussed and the conclusions reached. Please give PBR HAWAII written notification of any errors or omissions within seven calendar days. Otherwise, this report will be deemed an accurate record and directive.

Mr. Gordan Y. Furutani, Field Office Director
U.S. Department of Housing and Urban Development
Hawaii State Field Office
500 Ala Moana Boulevard, Suite 3A
Honolulu, Hawaii 96813

Dear Mr. Furutani:

Subject: Hawaii Coastal Zone Management (CZM) Program Federal Consistency Requirements for U.S. Department of Housing and Urban Development (HUD) Grant Programs

We have recently revised the Hawaii CZM Program list of federal assistance programs that require CZM federal consistency review by our office. We no longer review any HUD assistance programs, including Community Development Block Grants, and housing programs such as the Public Housing Capital Fund. Applicants for HUD assistance are no longer required to obtain CZM federal consistency approval for HUD assisted activities. Other CZM regulations such as the Special Management Area and Shoreline Setback provisions which are administered by the Counties, are still valid and may apply to HUD assisted projects. Each County Planning Department should be consulted for the applicability of Special Management Area and Shoreline Setback Area requirements. We suggest that the environmental checklist that applicants for HUD assistance must complete be modified to reflect the change in CZM requirements.

Thank you for your cooperation in ensuring compliance with Hawaii's CZM Program. If you have any questions, please contact John Nakagawa at 587-2878 or Debra Tom at 587-2840, of our CZM Program.

Sincerely,

Mary Lou Kobayashi

SUMMARY

Weston Solutions, Inc. (WESTON®) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 1020 Liliha Street Honolulu, Hawaii. The ESA was conducted in general accordance with the approved proposal dated 23 May 2016, *40 Code of Federal Regulations (CFR) Part 312 – Standards and Practices for All Appropriate Inquiries (AAI)*, and American Society for Testing and Materials (ASTM) International – *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E1527-13* (ASTM, 2013). Any exceptions to, or deletions from, this practice are described in **Section 5** of this report.

The Phase I ESA site visit was performed on 15 June 2016, by Lisa Waskom and Stacey Gray (WESTON). The subject property is located at 1020 Liliha Street and measures approximately 14.8 acres in size. The owner of the property is Hawaii Public Housing Authority (HPHA).

The property is developed with 35 multi-story buildings containing multi-family housing. The current housing units have been located the subject property since the early 1950s. A review of the Sanborn maps indicates the subject property has been developed since at least 1914. On the 1914 Sanborn map, the property was primarily developed with residential and tenement housing. Other notable historical uses for portions of the property include:

- 1914 - Auto painting, Hawaiian Soy Company, candy factory, mattress factory
- 1927, 1950 - Auto storage
- 1950 - Auto repair

No records were available to identify when the property was first developed.

FINDINGS AND OPINIONS

- An auto painting facility is identified on-site on the 1914 Sanborn Map in the southwest corner. A soy manufacturing facility is also present along the northern boundary of the subject property. Due to a lack of information regarding the auto painting operations, this is considered a recognized environmental condition (REC).
- An auto repair facility is identified on-site on the 1950 Sanborn Map along the eastern boundary of the subject property. Due to a lack of operational regarding the auto repair operations, this is considered a REC.

- Aim King Street Shell, a gas station, is located at 666 North King Street, directly adjacent to the west of the subject property. This is located downgradient of the subject property. The site is listed Environmental Data Resources, Inc. (EDR) *The Radius Report* on the Underground Storage Tank (UST), Leaking UST, and Conditionally Exempt Small Quantity Generator (CESQG) databases. This property is also labeled as an auto service and oil and gas storage from 1963 to 1993 on the Sanborn maps. Due to the close proximity and identification as a LUST site, there is a potential for contamination. Therefore, this is considered a REC.
- Auto storage is identified in the central portion of the subject property on the 1927 Sanborn Map and along the northern boundary on the 1927 and 1950 Sanborn Map. Due to a lack of information regarding the auto storage operations, this is considered a REC.
- A dry cleaner, auto repair facility, and oil and gas storage facilities are identified to the west and south of the subject property from 1950 to 1993. This is located down gradient of the subject property. Based on the topographic gradient, this is not considered a REC.
- A large garden was identified on the 1914 Sanborn Map on the eastern portion of the subject property. No information was available about the historic use of pesticide usage for this garden or any other landscaping that has occurred since development in 1914. This is not considered a REC but should be noted as a de minimis condition.
- Staining was identified throughout the parking lots on-site. This is not considered a REC but should be noted as a de minimis condition.

CONCLUSIONS

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- Historical property usage including auto painting, auto repair, and auto storage identified on-site. Lack of information about the above listed operations are considered RECs.
- A gas station is currently located on the western adjacent property. Historically, the property was also used as an auto service facility and had oil and gas storage on-site. This property is identified as a LUST site because of this the property is considered a REC.

The following *de minimis* conditions were noted based on current property use and/or surrounding property uses:

- Potential current and historic pesticide usage on the property since development in 1914.
- Staining identified throughout the parking lots on-site.

This Summary is intended to be a general description of the RECs identified as a result of the Phase I ESA of the subject property conducted by WESTON. However, this section is not

intended to be a "stand alone" document or to include the basis of all conclusions presented. The report should be read and used in its entirety. Information included in this section is subject to the scope of services and limitations noted in the original proposal and the complete report.

1 INTRODUCTION

1.1 SCOPE OF WORK AND PURPOSE

Weston Solutions, Inc. (WESTON®) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 1020 Liliha Street Honolulu, Hawaii. The ESA was conducted in general accordance with the approved proposal dated 23 May 2016, *40 Code of Federal Regulations (CFR) Part 312 – Standards and Practices for All Appropriate Inquiries (AAI)*, and American Society for Testing and Materials (ASTM) International – *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E1527-13*. The purpose of an ESA is to identify recognized environmental conditions (RECs). *ASTM E1527-13* defines RECs as follows:

> *[…] the presence or likely presence of any hazardous substances or petroleum products in, on or at a property:(1) due to release to the environment (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.*

A Phase I ESA consists of four general components: (1) a records review, (2) a site reconnaissance, (3) interviews, and (4) a report. The first three are conducted to identify environmental conditions related to the subject property. This Phase I ESA report provides the results of the first three components and fulfills the fourth.

This assessment report contains the results of reconnaissance of the subject property and surrounding properties (dates provided in each section) and a review of property, government, and historical records. Information used to complete this ESA was reasonably ascertainable, and visually and physically observable. This ESA did not include any testing or sampling of materials (e.g., soil, water, sediment, building materials, etc.).

1.2 SPECIAL TERMS AND CONDITIONS

This document has been prepared by WESTON solely for the use and benefit of Hunt Companies and is subject to WESTON Site Assessment Terms and Conditions, which were attached to the proposal dated 23 May 2016. Any use of this document or information herein by persons or entities

other than Hunt Companies, without the express written consent of WESTON, will be at the sole risk and liability of said person or entity, and WESTON will not be liable to Hunt Companies, or such persons or entities, for any damages resulting therefrom. It is understood that this document may not include all information pertaining to the described site.

1.3 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

ASTM E1527-13 (Section 4.5.1) acknowledges that "No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property." The ESA " [...] is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost." Furthermore, the *ASTM E1527-13* (Section 4.5.2) states that "There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions."

1.4 PERSONNEL PERFORMING ESAS AND QUALIFICATIONS

This ESA was completed by the following team of WESTON personnel, whose qualifications are provided at the end of the report:

- Pamela B. Marshall – Senior Technical Reviewer and Environmental Professional.
- Lisa Waskom, P.G –Project Manager and site reconnaissance.
- Vanessa Trevino. –Research and Report Preparation,

Ms. Marshall, is considered an Environmental Professional as defined by 40 CFR Part 312.10, has undertaken the inquiry as defined in 40 CFR part 312.21 (b), and has supervised the others above during the inquiry. The following is the Environmental Professional certification:

> *I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR Part 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR part 312.*

1.5 USER RESPONSIBILITIES

Section 6 of *ASTM E1527-13* outlines the following responsibilities of the user of a Phase I ESA to assist in the identification of potential RECs:

- Communication to the environmental professional, by the user, of information relative to any environmental cleanup liens filed or recorded under federal, tribal, state or local law of which the user is aware. (Section 6.1 and 6.4) *As part of this ESA, WESTON has not been notified of any such liens. WESTON's scope of work did not include a complete review of title information and no chain-of-title information was provided for review.*

- Communication to the environmental professional, by the user, of information relative to any activity and land use limitations (AULs) such as engineering controls, land use restrictions or deed restrictions, etc., that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law of which the user is aware. (Section 6.2) *As part of this ESA, WESTON has not been notified of any such restrictions. WESTON's scope of work did not include a complete review of title information, and no chain-of-title information was provided for review.*

- Communication to the environmental professional, by the user, of any specialized knowledge or experience, or other information that might be material to the identification of RECs. (Section 6.3) *No specialized knowledge or experience was communicated to WESTON with respect to these ESAs.*

- Communication to the environmental professional, by the user, if the user believes the purchase price of the property is lower than the fair market due to contamination. (Section 6.5) *No information regarding the purchase price or fair market value was provided to WESTON.*

- Communication to the environmental professional, by the user, of any commonly known or reasonably ascertainable information within the local community about the property, that is

material to the identification of RECs. (Section 6.6) *No information was communicated to WESTON with respect to these ESAs.*

- Communication to the environmental professional, by the user, of the obviousness of the presence or likely presence or threatened releases at the property of which the user is aware, that might be material to the identification of RECs. (Section 6.7) *No information was communicated to WESTON with respect to these ESAs.*

1.6 DISCLAIMERS

WESTON has performed this Phase I ESA in general conformance with the scope and limitations of the ASTM Standard and subject to the conditions and limitations noted herein and in WESTON's Site Assessment Terms and Conditions, which were included with WESTON'S proposal dated 23 May 2016. The information from the site reconnaissance is based on the conditions existing on the date of WESTON's visit to the property. The findings and conclusions presented herein are professional opinions based solely on visual observations of the facility and vicinity, and interpretation of information provided or reasonably available to WESTON. Past conditions were considered on the basis of observations, readily available records, interviews, and recollections.

WESTON does not warrant or guarantee the correctness, completeness, and/or currentness of the information obtained from third parties contained in the environmental record sources and recollections used for this assessment. Such information is the product of independent investigation by parties other than WESTON and/or information maintained by government agencies.

WESTON did not collect samples or perform any testing during the property visit. It is possible that past contamination remains undiscovered or that property conditions will change in the future. WESTON does not warrant or guarantee the property suitable for any particular purpose or certify the property as "clean."

Detailed asbestos, indoor air quality, lead-based paint, vapor intrusion, occupational health and safety, radon, and wetland surveys were not requested, nor included, as part of this project.

Information, limitations, and disclaimers provided in this general section apply to all of the sections included in the remaining report.

2 PROPERTY DESCRIPTION

2.1 PROPERTY DESCRIPTION, LOCATION, AND PROPERTY HISTORY

Facility Name	Mayor Wright Homes
Address	1020 Liliha Street Honolulu HI
Size of property (acres)	14.845
Latitude/Longitude	21.3200880° 157.8639560°
Site and Vicinity General Characteristics	The subject property is located in a well-developed area.(See **Figure 1**, Property Location Map
Property Description	Site photographs are provided in **Appendix A**.
Size of building(s) (sq ft)	There are 35 buildings present on-site. Specific sizes of the buildings were not provided.
Construction date of building(s)	The buildings were constructed in early 1950.
Renovation dates and description (if applicable)	None provided.
Building(s) description	The multi-story buildings are constructed of concrete and wood siding.
No. of employees	20 full time
Owned or leased	Owned by the HPHA (EDR, 2016f)
Current property operations	The property is a multi-family residential property. (See **Figure 3**, Property Layout Map)
Date current operations commenced at facility	In early 1950s
Legal description	Unavailable

Summary of current and previous property uses, and dates of operation		
Based on a review of available records including Sanborn Maps, topographic maps, aerial photos, the current and previous uses and owners (if known) of the subject property are as follows:		
Start	**End**	**Description**
1952 - present		The subject property is identified as Mayor Wright Homes which is multi-family residential housing.
1914 – 1950		The subject property is developed with mostly residential properties. Some commercial stores are identified along the southern boundary (N King St.).

2.2 SURROUNDING PROPERTIES

Surrounding properties are shown on **Figure 2**. Site photographs are provided in **Appendix A**. A summary of the surrounding properties as observed during the 15 June 2016 site reconnaissance is provided in the table below.

Direction	Description
North	Pualane St. borders the property on the north with residential properties beyond.
East	Aldersgate Methodist Church and Agamata Building (retail businesses) at the corner of Wineyard Blvd and Lilha St Mechanic Shop, Restaurant, and Apartments Waena Housing is located east and south across Liliha St.
South	Residential
West	Along N. King Street are gas stations, Apartments, a used car lot, and Jiffy Lube

3 RECORDS REVIEW

3.1 PREVIOUSLY PREPARED ENVIRONMENTAL REPORTS

No previously prepared environmental reports for the subject property were provided for review.

3.2 STANDARD ENVIRONMENTAL RECORD SOURCES

For the subject property, WESTON relied on the following reports provided by Environmental Data Resources, Inc. (EDR) for information:

- *The EDR Radius Map™ Report with GeoCheck® (The Radius Report)* – An electronic search of the standard environmental record sources. This report contains certain information obtained from a variety of public and other sources reasonable available to EDR. The Orphan Summary contains a those sites that could not be mapped due to insufficient addresses. The *GeoCheck* portion of *The Radius Report* provides general soil, groundwater and geology information for the subject property and surrounding properties. A copy of the report is provided as **Appendix B**.
- *The EDR Aerial Photo Decade Package* – Aerial photographs are provided for the subject property and are included in **Appendix C**.
- *EDR Historical Topo Map Report* – Topographic maps are provided for the subject property and are included in **Appendix D**.
- *The EDR-City Directory Image Report* – The report is generally a summary of information from city directories reviewed at approximately 5-year intervals. A copy of the city directory report is provided as **Appendix E**.
- *Certified Sanborn® Map Report* – Sanborn maps were provided for the subject property and are provided as **Appendix F**.
- *Chain of Ownership Report* – A chain of ownership report was not obtained as part of the scope of work for this ESA.
- *EDR Environmental Lien and AUL Search* – As part of the records search, EDR provides a search for environmental liens. A copy of the lien search report is provided as **Appendix G**.
- *The EDR Property Tax Map Report* – As part of the records search, EDR provides a search for property taxes. A copy of the property tax map report is provided in **Appendix H**.
- *EDR Building Permit Report* – As part of the records search, EDR provides a search for building permits. A copy of the building permit report is provided in **Appendix H.**

3.2.1 The Radius Report

The Radius Report did not identify the subject property on the databases searched.

The Radius Report identified the following sites near the subject property:

- Four Superfund Enterprise Management System (SEMS) sites within 1/2-mile radius.
- Two SEMS-Archive sites within 1/2-mile radius.
- One Corrective Action Report (CORRACTS) site within 1-mile radius.
- Seven Resource Conservation and Recovery Act (RCRA) Conditionally Exempt Small Quantity Generator (CESQG) within 1/4-mile radius.
- Seventy four Hawaii (HI) SHWS sites within 1-mile radius.
- Thirty eight HI Leaking Underground Storage Tank (LUST) sites within 1/2-mile radius.
- Twenty four HI Underground Storage Tank (UST) sites withing 1/4-mile radius.
- Twelve HI Engineering (ENG) Controls sites within 1/2-mile radius.
- Four HI Voluntary Cleanup Program (VCP) sites within 1/2-mile radius.
- Six RCRA NonGen/NLR sites within 1/4-mile radius.
- One Formerly Used Defense Sites (FUDS) within 1-mile radius.
- One Department of Defense (DOD) site within 1/2-mile radius.
- One Fuels Program site within 1/4-mile radius.
- Two EDR Manufactured Gas Plants (MGP) sites within 1-mile radius.
- Eight EDR Hist Auto sites within 1/8-mile radius.
- One EDR Hist Cleaner site within 1/8-mile radius.

Included below are details for the nearby sites that WESTON believes could have potential environmental impacts to the subject property. A figure showing the locations of the sites is provided in **Appendix B**.

3.2.2 Orphan Sites Summary

The Orphan Sites summary included in *The Radius Report* is a listing of sites that could not be mapped by EDR due to insufficient addresses. WESTON attempted to locate the orphan sites using internet-based mapping programs. WESTON has not identified any sites that appear to be located within an approximately 1/2-mile radius of the subject property.

3.2.3 Water and Oil/Gas Well Summary

Information regarding area water wells, which includes water supply wells, groundwater monitoring wells, as well as oil and natural gas wells, is provided in *The Radius Report* and shown on the Physical Setting Source Map, included as **Appendix B**. No wells were identified on the subject property. The wells reported within 1/4-mile of the subject property were listed as irrigation wells or abandoned wells.

3.2.4 Physical Setting

Setting	Description
Topography	The subject property is generally flat. According to *The Radius Report*, the elevation of the subject property is approximately 10 feet above mean sea level, and the general topographic gradient is to the general west-southwest direction (EDR 2016a).
Soil	According to *The Radius Report*, the dominant surficial soil component in the vicinity of the subject property is Ewa. Ewa soil is characterized by a silty clay loam texture with moderate infiltration rates. The soils are moderately well to well drained with a moderately coarse texture.

Setting	Description
Geology	The Honolulu Harbor complex is located within the narrow coastal plain of Oahu's south central coast, geologically referred to as the Honolulu Plain. The Honolulu Plain and much of the rest of the southern edge of Oahu is underlain by a broad elevated coral reef, covered by alluvium carried out from the mountains. The coral reef rocks were deposited during prehistoric time when the sea level was higher.
Groundwater and Vapor Migration Potential	No site specific groundwater data was available.
Wetlands	No potential wetland areas were observed on the subject property during the site reconnaissance. *The Radius Report* identified wetland areas within approximately 1/2-mile south of the subject property.
Surface Water	According to *The Radius Report*, the subject property is not located within a floodplain. A 100-year floodplain is identified approximately 1/2-mile east of the subject property (EDR, 2016a). No surface water bodies are present on the subject property.

3.2.5 Aerial Photograph Review

Aerial photographs were provided by EDR (EDR, 2016b). Copies of the aerial photographs are included in **Appendix C**. The review is summarized below:

Year	Source	Description
1952	USGS	Subject Property: The subject property is developed with numerous buildings. The development appears to be a multi-family development. Surrounding Properties: The area surrounding the property is densely developed. The buildings appear to be mostly residential with some commercial/industrial buildings. Streets are present to the west, east, and south of the subject property. A canal is present a few blocks to the north.
1968	USGS	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: The property to the south that was previously developed is now cleared. A large roadway now present a block to the east. Commercial/industrial type buildings are visible west and southwest.

Year	Source	Description
1976	USGS	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: The property to the south is now developed with what appears to be a multi-family development.
1978	USGS	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: No significant changes have occurred since the previous aerial photograph.
1985	USGS	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: The areas southwest and west (west of N. King St.) are densely developed with industrial buildings.
2004	USGS	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: No significant changes have occurred since the previous aerial photograph.
2008	USGS	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: No significant changes have occurred since the previous aerial photograph.

3.2.6 Topographic Map Review

Topographic maps were provided by EDR (EDR, 2016c). Copies of the topographic maps are included in **Appendix D**. The topographic maps were reviewed to evaluate development on the subject property and adjacent properties. The review is summarized below:

Year	Description
1953	Subject Property: A road runs northwest to southeast through the center of the subject property. Two additional short roads or driveways are shown on the property also. The shading of the property and surrounding properties on the map indicate that the area is densely developed. No specific structure are identified on the subject property. Surrounding Properties: The surrounding areas are densely developed. A number of churches and schools are identified surrounding the property.
1959	Subject Property: No significant changes have occurred since the previous

Year	Description
	topographic map. Surrounding Properties: No significant changes have occurred since the previous topographic map.
1969	Subject Property: No significant changes have occurred since the previous topographic map. Surrounding Properties: The property to the south is no longer colored as being developed.
1983	Subject Property: No significant changes have occurred since the previous aerial photograph. Surrounding Properties: No significant changes have occurred since the previous aerial photograph.
1998	Subject Property: Additional roads are present on the subject property. Surrounding Properties: No significant changes have occurred since the previous aerial photograph.
2013	Subject Property: Additional roads are present on the subject property. The area is now identified as Mayor Wright Homes. Surrounding Properties: No significant changes have occurred since the previous aerial photograph.

3.2.7 City Directory

The EDR-City Directory Image Report (EDR, 2016d) was reviewed for 1020 Liliha Street, as well as surrounding properties for which listed names indicate a potential source of environmental impacts. Business directories including city cross reference and telephone directories were reviewed, if available, at approximately 5-year intervals for the years spanning 1992 through 2013. Based on a review of the Sanborn maps and development of the property since at least 1914, numerous historical addresses have been associated with the subject property. The majority of the historical property addresses listed are residential or businesses that have been determined to not be of significance with the exception of the below service station. A copy of the full *The EDR-City Directory Image Report* is included in **Appendix E**.

Surrounding Properties – N. Vineyard Blvd

3.2.8 Sanborn Map Review

Sanborn Maps provided by EDR (EDR, 2016e) were reviewed in order to help identify potential environmental conditions on the subject property due to historic property use and adjacent and surrounding properties. Copies of the Sanborn Maps are included in **Appendix F**.

Year	Description
1914	Subject Property: De Sha Lane and Dwight Lane are present running west to east on the western portion of the subject property. Kauhaukoi Lane is present running north to south. The majority of the subject property is identified as dwellings/tenements. A hotel and candy factory are identified along the southern border along with an auto painting facility. Hawaiian Soy Company Ltd. Facility is identified on the north side of the property. A large part of the eastern portion is labeled as a vegetable garden. Adjacent Properties: Pua borders the property on the northwest. Liliha borders the property on the south. The majority of the surrounding properties are identified as dwellings.
1927	Subject Property: The auto painting facility is no longer present. The property is still occupied by dwellings for the majority of the developments. Stores are identified along the southern border. Auto storage facilities are identified on the northern side in the location of the soy company facility shown on the 1914 map and also in the center of the property. Adjacent Properties: A church is present to the southeast and a Chinese laundry facility is identified to the west.
1950	Subject Property: An auto repair facility is identified along the eastern boundary. The auto storage facility on the northern side of the property is still present. A large portion of the property is depicted as being vacant. Adjacent Properties: Two auto repair facilities are identified to the south of the subject property. Two areas are labeled gas & oil one to the south and one to the west. A laundry facility is identified to the east.

Year	Description
1955	Subject Property: The subject property is now identified as Mayor Wright Homes. De Sha Lane, Dwight Lane, and Kauhaukoi Lane are no longer present. North Kukui is now present running north to south through the center of the property. Adjacent Properties: The laundry facility is no longer present to the east. There are no significant changes in the remaining surrounding properties
1963	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: The gas and oil storage to the south is no longer identified. A dry cleaning facility is identified to the west. An additional gas and oil storage area is identified on the adjacent property near the northwest corner of the subject property.
1974	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: The property to the south is no longer developed with an auto repair facility or gas and oil storage. The area is developed with what is potentially a multi-family complex. The area to the north across Pua Lane is now cleared/vacant.
1975	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: The gas and oil storage area is now also identified as an auto service area.
1976	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: No significant changes have occurred since the previous Sanborn Map.
1978	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: No significant changes have occurred since the previous Sanborn Map.
1985	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: No significant changes have occurred since the previous Sanborn Map.
1991	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: The gas and oil storage are to the west is no longer present.

Year	Description
1993	Subject Property: No significant changes have occurred since the previous Sanborn Map. Adjacent Properties: No significant changes have occurred since the previous Sanborn Map.

3.2.9 Chain-Of-Title

A chain-of-title report was not included in the scope of work for this ESA, and no chain-of-title information was reviewed.

3.2.10 Environmental Liens and Activity and Use Limitations

A search for environmental liens and activity and use limitations (AULs) was conducted by EDR. No environmental liens or AULs were identified for the parcel searched. A copy of *The EDR Environmental LienSearch™ Report* (EDR, 2016f) is included in **Appendix H**.

3.2.11 Tax Map Report and/or Building Permit Report

Tax map reports reported no coverage and building permit reports reported no permits for the target property. A copy of *The EDR Property Tax Map Report* and/or *EDR Building Permit Report* is included in **Appendix I**.

3.3 REGULATORY AGENCY FILES AND RECORDS REVIEW

Based on the listings in *The Radius Report*, a review of pertinent regulatory files and or records associated with the listing should be conducted. Information regarding the subject property was requested from the following agencies:

3.3.1 Federal

- EPA Envirofacts Online Search – No records for the subject property were identified. However, King Street Shell was identified at 666 N. King Street which is the adjacent western property.
- EPA Enforcement & Compliance History Online (ECHO) Searchable Database – No facilities were identified.

3.3.2 **State**

- Hawaii Department of Health – WESTON contacted the Department of Health on 8 June 2016 electronically. WESTON received notice that no records were available for review.

4 SITE RECONNAISSANCE AND INTERVIEWS

4.1 SITE VISIT

Site Assessor	Lisa Waskom and Stacey Gray
Date of Reconnaissance	15 June 2016
Methodology Used	Visual inspection/walk-through of the subject property and adjacent properties from publicly accessible areas.
Limiting Conditions	Per Hunt's instruction, the interiors of residential buildings were not inspected. Asbestos and lead based paint surveys were previously completed by Hunt in 2015 from building interiors.

4.2 INTERVIEWS RECORDS

Name	Cynthia Yoshida
Employer	HPHA
Position	Public Housing Supervisor
Time with Company	15 years
Time at this Facility	12 Years
Date & Method of Interview	An on-site Interview was conducted with the Public Housing Supervisor to obtain information about the property and current and past uses. No interior inspections were conducted for any of the housing units. Asbestos and lead based paint surveys were previously completed by Hunt in 2015 from building interiors.

4.3 WASTE GENERATION, PERMITTING AND UTILITIES

Water Supply	City of Honolulu
Electricity	Hawaiian Electric Company (HECO)
Natural Gas	Hawaii Gas
Wastewater	No industrial wastewater is generated at the facility. Sanitary wastewater discharges to the city sewer system. No evidence of septic systems was observed during the site inspection of the facility.
Stormwater	Stormwater drains via sheet flow to storm drains located around the property before discharging to the City sewer system.
Air	No potential sources of air emissions were observed. No air emissions are generated at the site, and the facility does not have an air permit.
Cooling Towers	No cooling towers were noted during the site reconnaissance.

Solid Wastes	No industrial solid waste is generated at the facility. Household trash is disposed of in dumpsters at various locations throughout the subject property.
Hazardous Wastes	No hazardous waste is currently generated on-site.
Waste Disposal Areas	There are no waste disposal areas on the subject property with the exception of the municipal dumpsters.

4.4 HAZARDOUS/DANGEROUS MATERIALS

Products and Chemicals Used / Managed / Stored	Two flammable lockers are located in the southwest portion of the site behind the main office which are used to store gasoline for lawn maintenance equipment. A number of paint buckets and other materials were stored under a staircase on-site. No other chemical were reported used on-site or observed during the site walk.
Products and Chemicals Storage Location	Flammable storage lockers are located outside the maintenance shop located behind the Main Office.
Storage Tanks	No USTs are present on-site. Water tanks are located on the roofs of some of the buildings on-site. These tanks were reportedly used for water storage to distribute to each apartment unit, but are no longer in use.
Chlorinated Solvents Used	According to the site contact, no chlorinated solvents are currently used on-site.

4.5 ADDITIONAL OBSERVATIONS AND INFORMATION

Vapor Migration	Due to the close proximity of operational and historical gas stations and dry cleaners, potential for vapor migration cannot be ruled out.
PCB-Containing Equipment	Transformers are located throughout the property. The transformers are located on power poles. Non-PCB stickers could not be located on the transformers.
Radon	No known testing has been performed at subject property. An EPA map of radon zones indicates Honolulu County, Hawaii is considered a Zone 3 area. Average radon levels for Zone 3 are less than (<) 2 picocuries per liter (pCi/L) (EDR, 2016a). Air sampling was not performed at the subject property to evaluate actual radon levels.
Asbestos-Containing Materials (ACM)	The buildings on-site were not entered. A separate asbestos and lead based paint/hazardous materials survey will being conducted under separate contract outside of WESTON's scope of work.
Lead-Based Paint (LBP)	No testing for LBP. Given age of building, LBP may be present.
Lead and Drinking Water	No known water testing has been completed.
Fluorescent Lights	The buildings were not entered.
Sumps, Oil/Water Separators	None observed during site reconnaissance.

Monitoring Wells, Vent Pipes, Manhole Covers, etc.	None observed during site reconnaissance.
Staining	Oil staining was observed in the parking lots at various locations from cars.
Stressed Vegetation	None observed during site reconnaissance.
Ponds, Pits, Lagoons, and Debris Piles	One covered area was observed but was not opened. Upon further questioning of the Maintenance Foreman, Wade Kau, it was determined this area is a partially covered storm water drain.
Water Staining or Mold Within Building	The buildings on-site were not entered.
Indoor Air Quality Issues (complaints and/or testing)	No issues were observed or reported during site reconnaissance. No testing was conducted.
Odors	No strong, pungent, or noxious odors were detected during the property visit.
Pools of Liquid	None observed during site reconnaissance.
Unidentified Substance Containers	None observed during site reconnaissance.

5 EXCEPTIONS, DELETIONS, AND DATA GAPS

WESTON has performed this Phase I ESA in general conformance with the scope and limitations of *ASTM E1527-13* for the property located in Honolulu, Hawaii. Exceptions to, or deletions from, this practice or data gaps include the following:

- The interiors of the residential buildings were not inspected at the direction of Hunt, as asbestos and lead based paint surveys were previously completed in 2015 from building interiors.
- A chain-of-title report was not obtained, and no chain-of-title information was reviewed.

These exceptions are not thought to have a material impact on the findings and conclusions of the ESA.

6 FINDINGS, OPINIONS AND CONCLUSIONS

WESTON has performed a Phase I ESA in conformance with the scope and limitations of *ASTM Practice E1527-13* of 1020 Liliha Street, the property. Any exceptions to, or deletions from, this practice are described in **Section 5** of this report.

- An auto painting facility is identified on-site on the 1914 Sanborn Map in the southwest corner. A soy manufacturing facility is also present along the northern boundary of the subject property. Due to a lack of information regarding the auto painting operations, this is considered a REC.
- An auto repair facility is identified on-site on the 1950 Sanborn Map along the eastern boundary of the subject property. Due to a lack of operational regarding the auto repair operations, this is considered a REC.
- Aim King Street Shell, a gas station, is located at 666 North King Street, directly adjacent to the west of the subject property. This is located downgradient of the subject property. The site is listed EDR *The Radius Report* on the UST, LUST, and CESQG databases. This property is also labeled as an auto service and oil and gas storage from 1963 to 1993 on the Sanborn maps. Due to the close proximity and identification as a LUST site, there is a potential for contamination. Therefore, this is considered a REC.
- Auto storage is identified in the central portion of the subject property on the 1927 Sanborn Map and along the northern boundary on the 1927 and 1950 Sanborn Map. Due to a lack of information regarding the auto storage operations, this is considered a REC.
- A dry cleaner, auto repair facility, and oil and gas storage facilities are identified to the west and south of the subject property from 1950 to 1993. This is located down gradient of the subject property. Based on the topographic gradient, this is not considered a REC.
- A large garden was identified on the 1914 Sanborn Map on the eastern portion of the subject property. No information was available about the historic use of pesticide usage for this garden or any other landscaping that has occurred since development in 1914. This is not considered a REC but should be noted as a de minimis condition.
- Staining was identified throughout the parking lots on-site. This is not considered a REC but should be noted as a de minimis condition.

6.1 CONCLUSIONS

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- Historical property usage including auto painting, auto repair, and auto storage identified on-site. Lack of information about the above listed operations are considered RECs.

- A gas station is currently located on the western adjacent property. Historically, the property was also used as an auto service facility and had oil and gas storage on-site. This property is identified as a LUST site because of this the property is considered a REC.

The following *de minimis* conditions were noted based on current property use and/or surrounding property uses:

- Potential current and historic pesticide usage on the property since development in 1914.

- Staining identified throughout the parking lots on-site.

Yoshida, Cynthia. Interview with Mr. Cynthia Yoshida, conducted by Lisa Waskom and Stacey Gray of Weston Solutions, Inc., 15 June 2016.

8 QUALIFICATIONS

WESTON utilized qualified professional staff trained in performing the scope of work required for this Phase I ESA. This team included a senior technical reviewer, project manager, and technical support team. Their roles are described in more detail as follows:

- Technical Manager and Environmental Professional – Pamela Marshall has more than 17 years of experience performing environmental consulting on projects, with most of that experience on Phase I and II ESAs. As technical manager, Ms. Marshall is responsible for implementing the technical work for any ESAs assigned to WESTON and utilizing other staff, as required, to assist her in completing the work on schedule
- Project Manager and Site Assessor - Lisa Waskom is a Senior Project Manager/Environmental Professional with over 19 years of environmental site assessment experience, including Phase 1 and Phase 2 assessment work. Ms. Waskom coordinated all site activities including inspection, reporting, and helped conduct the site interview.
- Senior Project Scientist and Site Assessor - Stacey Gray is an Environmental Professional with more than seven years of environmental site assessment experience, including Phase I and Phase II ESAs. Ms. Gray conducted the site inspection and assisted with the report preparation and records review.
- Report Preparation and Records Review – Vanessa Trevino is a Project Scientist with more than eight years of experience in preparing Phase I ESAs. Ms. Trevino completed the ASTM Training on Phase I and Phase II Environmental Site Assessments for Commercial Real Estate in May of 2010.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

HI RGA LUST - Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there are 4 SEMS sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

KAPALAMA INCINERATOR	757 KOKEA STREET	WNW 1/4 - 1/2 (0.389 mi.)	U81	115

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
HAWAIIAN ELECTRIC -	***170 ALA MOANA BOULEV***	***S 1/2 - 1 (0.888 mi.)***	***142***	***223***

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are

7 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

HI SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Health.

A review of the HI SHWS list, as provided by EDR, and dated 01/22/2016 has revealed that there are 74 HI SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

HI LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Health's Active Leaking Underground Storage Tank Log Listing.

A review of the HI LUST list, as provided by EDR, and dated 01/13/2016 has revealed that there are 38 HI LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

HI UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Health's Listing of Underground Storage Tanks.

A review of the HI UST list, as provided by EDR, and dated 01/13/2016 has revealed that there are 24 HI UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
HAWAIIAN GAS PRODUCT	516-520 KUWILI ST	SW 1/8 - 1/4 (0.200 mi.)	J40	58
BHP GASCO	432 PACIFIC STREET	WSW 1/2 - 1 (0.503 mi.)	Z102	148

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110005724065

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Land type: Federal
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No

USNAVY SUBASE PEARL HARBOR (Continued) **1015730964**

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

Registry ID: 110000495848

Environmental Interest/Information System
GASOLINE AND DIESEL PRODUCERS

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits

HONOLULU TERMINAL TANK 4284 (Continued) **1000167494**

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

HAZARDOUS WASTE BIENNIAL REPORTER

AIR MAJOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: State
Owner/Operator Type: Owner
Owner/Op start date: 01/01/1950
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No

MOANA PAA KAI (Continued) **1000146699**

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 04/07/2008
Site name: MOANA PAA KAI
Classification: Conditionally Exempt Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Date form received by agency: 02/07/1989
Site name: HAWAIIAN TUG & BARGE CORP
Classification: Not a generator, verified

Date form received by agency: 03/25/1988
Site name: HAWAIIAN TUG & BARGE CORP
Classification: Small Quantity Generator

Corrective Action Summary:
Event date: 01/01/1990
Event: CA029ST

Event date: 04/30/1990
Event: CA029EP

Event date: 04/30/1990
Event: CA049PA

Event date: 04/30/1990
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 03/16/1992
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 03/16/1992
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/01/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 12/11/2012
Event: CA550RC

Event date: 12/11/2012
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been

HAWAIIAN ELECTRIC - HONOLULU GENERATING STATION (Continued) **1000146691**

determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

MAYOR WRIGHT HONOLULU
1020 LILIHA STREET
HONOLULU, HI 96817

TARGET PROPERTY COORDINATES

Latitude (North):	21.320088 - 21° 19' 12.32''
Longitude (West):	157.863956 - 157° 51' 50.24''
Universal Tranverse Mercator:	Zone 4
UTM X (Meters):	617821.8
UTM Y (Meters):	2357859.2
Elevation:	10 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5941635 HONOLULU, HI
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

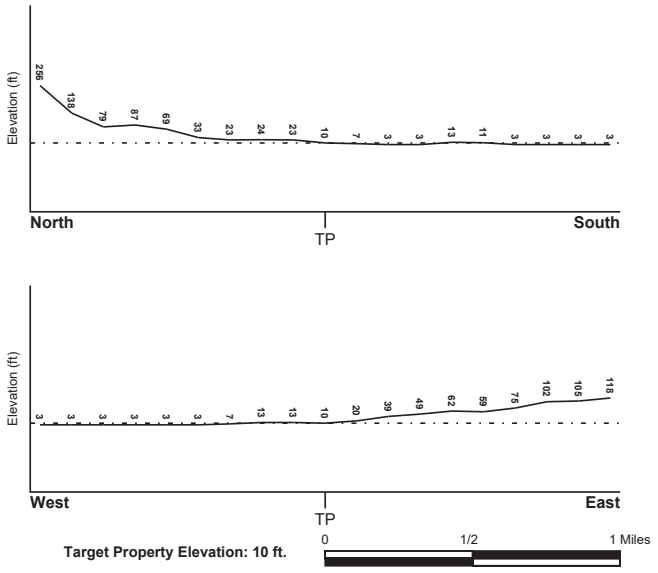
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
HONOLULU, HI	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 15003C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HONOLULU	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Ewa

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	ML-K (proposed)	Max: 14 Min: 4.23	Max: 7.3 Min: 6.6
2	7 inches	29 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	ML-K (proposed)	Max: 14 Min: 4.23	Max: 7.3 Min: 6.6
3	29 inches	38 inches	bedrock	Not reported	Not reported	Max: 42 Min: 1	Max: Min:

Soil Map ID: 2

Soil Component Name: Kaena

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 107 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 4.23 Min: 0.42	Max: 7.3 Min: 6.6
2	9 inches	37 inches	stony clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.41 Min: 0.01	Max: 7.3 Min: 6.6
3	37 inches	53 inches	stony clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.41 Min: 0.01	Max: 7.3 Min: 6.6

Soil Map ID: 3

Soil Component Name: Fill land, mixed

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 152 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 1.41	Max: 7.3 Min: 6.1
2	5 inches	59 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 1.41	Max: 7.3 Min: 6.1
3	59 inches	70 inches	bedrock	Not reported	Not reported	Max: 0.42 Min: 0.02	Max: Min:

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Telephone: 808-587-2895

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Well Index Database
Source: Commission on Water Resource Management
Telephone: 808-587-0214
CWRM maintains a Well Index Database to track specific information pertaining to the construction and installation of production wells in Hawaii

OTHER STATE DATABASE INFORMATION

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Site Name:

Mayor Wright Honolulu
1020 Liliha Street
Honolulu, HI 96817
EDR Inquiry # 4632621.3

Client Name:

Weston Solutions, Inc.
5599 San Felipe
Houston, TX 77056
Contact: Lisa Waskom

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Weston Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.ednet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Sanborn® Library search results

Certification #: 1DCB-4DC6-9784

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✔ Library of Congress
- ✔ University Publications of America
- ✔ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Weston Solutions, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

(14) By QUITCLAIM DEED of the STATE OF HAWAII dated July 10, 1986, recorded in Liber 19657 at Page 159 (L.O.D. S-27576) and filed as Land Court Document No. 1384263.

2. Pursuant to Act 196, Session Laws of Hawaii 2005 and Act 180, Session Laws of Hawaii 2006, the Housing and Community Development Corporation of Hawaii was separated into two state agencies, now known as the Hawaii Housing Finance and Development Corporation and the Hawaii Public Housing Authority.

3. Said Act 180, Session Laws of Hawaii 2006 ("Act 180") further provides that:

a. the respective jurisdiction, functions, powers, duties and authority theretofore exercised by the Housing and Community Development Corporation of Hawaii relating to appropriate housing functions and public housing shall be transferred and conferred upon

the HPHA; and

b. the HPHA shall succeed to all of the rights and powers previously exercised, and all of the duties and obligations incurred by the Housing and Community Development Corporation of Hawaii in the exercise of the functions, powers, duties, and authority transferred, relating to appropriate housing functions and public housing.

4. In connection with such transfer of the functions, powers, duties, and authority, all deeds, leases, contracts, loans, agreements, permits, or other documents executed or entered into by or on behalf of the Housing and Community Development Corporation of Hawaii, relating to appropriate housing functions and public housing, were transferred to the HPHA as of the effective date of Act 180.

[SIGNATURE PAGE FOLLOWS]

[THE REMAINDER OF THIS PAGE IS LEFT INTENTIONALLY BLANK]

CONFIRMATION OF OWNERSHIP

NOW, THEREFORE, the undersigned HPHA, fee simple owner, hereby confirms that as of the effective date of Act 180, it has by operation of law and legislative act succeeded to, and currently holds all of the estate, right, title, and interest of the Housing and Community Development Corporation of Hawaii in and to the parcel, and the improvements, tenements, rents, profits, rights, easements, privileges, hereditaments, and appurtenances thereunto belonging, or in anywise appertaining thereto, at law or in equity.

IN WITNESS WHEREOF, the undersigned executed these presents as of the day and year first above written.

DATE OF THIS NOTICE: 6/16/16

GOVERNMENT RECORDS YOU REQUESTED (attach copy of request or provide brief description below):
1.
2.
3.
4.

THIS NOTICE IS TO INFORM YOU THAT YOUR RECORD REQUEST: There are no UST records

☐ **Will be granted in its entirety.**

☐ **Cannot be granted. Agency is unable to disclose the requested records for the following reason:**

- ☒ Agency does not maintain the records. (HRS § 92F-3)
  Other agency that is believed to maintain records: _____
- ☐ Agency needs further clarification or description of the records requested. Please contact the agency and provide the following information: _____
- ☐ Request requires agency to create a summary or compilation from records, but requested information is not readily retrievable. (HRS § 92F-11(c))

☐ **Will be granted in part and denied in part,** OR ☐ **Is denied in its entirety**
Although the agency maintains the requested records, it is not disclosing all or part of them based on the exemptions provided in HRS § 92F-13 and/or § 92F-22 or other laws cited below.
(Describe the portions of records that the agency will not disclose.)

RECORDS OR INFORMATION WITHHELD	APPLICABLE STATUTES	AGENCY JUSTIFICATION

REQUESTER'S RESPONSIBILITIES:

You are required to (1) pay any lawful fees and costs assessed; (2) make any necessary arrangements with the agency to inspect, copy or receive copies as instructed below; and (3) provide the agency any additional information requested. If you do not comply with the requirements set forth in this notice within 20 business days after the postmark date of this notice or the date the agency makes the records available, you will be presumed to have abandoned your request and the agency shall have no further duty to process your request. Once the agency begins to process your request, you may be liable for any fees and costs incurred. If you wish to cancel or modify your request, you must advise the agency upon receipt of this notice.

OIP (rev. 12/1/2015)

METHOD & TIMING OF DISCLOSURE:

Records available for public access in their entireties must be disclosed within a reasonable time, not to exceed 10 business days from the date the request was received, or after receipt of any prepayment required. Records not available in their entireties must be disclosed within 5 business days after this notice or after receipt of any prepayment required. HAR § 2-71-13(c). If incremental disclosure is authorized by HAR § 2-71-15, the first increment must be disclosed within 5 business days of this notice or after receipt of any prepayment required.

Method of Disclosure:

☐ Inspection at the following location: _____

☐ As requested, a copy of the record(s) will be provided in the following manner:

- ☐ Available for pick-up at the following location: _____
- ☐ Will be mailed to you.
- ☐ Will be transmitted to you by other means requested: _____

Timing of Disclosure: All records, or the first increment if applicable, will be made available or provided to you:

☐ On _____, 20___.

☐ **After prepayment** of 50% of fees and 100% of costs, as estimated below.

For incremental disclosures, each subsequent increment will be disclosed within 20 business days after:

- ☐ The prior increment (if one prepayment of fees is required and received), or
- ☐ Receipt of each incremental prepayment, if prepayment for each increment is required.

Records will be disclosed in increments because the records are voluminous and the following extenuating circumstances exist:

- ☐ Agency must consult with another person to determine whether the record is exempt from disclosure under HRS chapter 92F.
- ☐ Request requires extensive agency efforts to search, review, or segregate the records or otherwise prepare the records for inspection or copying.
- ☐ Agency requires additional time to respond to the request in order to avoid an unreasonable interference with its other statutory duties and functions.
- ☐ A natural disaster or other situation beyond agency's control prevents agency from responding to the request within 10 business days.

ESTIMATED FEES & COSTS AND PAYMENT:

FEES: For personal record requests under Part III of chapter 92F, HRS, the agency may charge you for its costs only, and fee waivers do not apply.

For public record requests under Part II of chapter 92F, HRS, the agency is authorized to charge you fees to search for, review, and segregate your request (even if a record is subsequently found to not exist or will not be disclosed in its entirety). The agency must waive the first $30 in fees assessed for general requesters, OR in the alternative, the first $60 in fees when the agency finds that the request is made in the public interest. Only one waiver is provided for each request. *See* HAR §§ 2-71-19, -31 and -32.

COSTS: For either personal or public record requests, the agency may charge you for the costs of copying and delivering records in response to your request, and other lawful fees and costs.

PREPAYMENT: The agency may require prepayment of 50% of the total estimated fees and 100% of the total estimated costs prior to processing your request. If a prepayment is required, the agency may wait to start any search for or review of the records until the prepayment is received by the agency. Additionally, if you have outstanding fees or costs

from previous requests, including abandoned requests, the agency may require prepayment of 100% of the unpaid balance from prior requests before it begins any search or review for the records you are now seeking.

The following is an itemization of what you must pay, based on the estimated fees and costs that the agency will charge you and the applicable waiver amount that will be deducted:

For public record requests only:

Fees:	Search	Estimate of time to be spent: 15 ~~hours~~ mins ($2.50 for each 15-minute period)	$2.50
	Review & segregation	Estimate of time to be spent: _____ hours ($5.00 for each 15-minute period)	$30.00
	Fees waived	☑ general ($30), **OR** ☐ public interest ($60) (Only one waiver per request)	<$ ____>
	Other	_____ (Pursuant to HAR §§ 2-71-19 & 2-71-31)	$
	Total Estimated Fees:		$ 0

For public or personal record requests:

Costs:	Copying	Estimate of # of pages to be copied: _____ (@ $____ per page, pursuant to HRS § 92-21)	$
	Delivery	Postage	$
	Other	_____	$
	Total Estimated Costs:		$ 0

TOTAL ESTIMATED FEES AND COSTS from above: $ 0

☐ **The estimated fees and costs above are for the first incremental disclosure only. Additional fees and costs, and no further fee waivers, will apply to future incremental disclosures.**

☐ **PREPAYMENT IS REQUIRED** (50% of fees + 100% of costs, as estimated above) $

☐ **UNPAID BALANCE FROM PRIOR REQUESTS** (100% must be paid before work begins) $

TOTAL AMOUNT DUE AT THIS TIME $ 0

Payment may be made by: ☐ cash

☐ personal check payable to _____

☐ other _____

For questions about this notice or the records being sought, please contact the agency person named at the beginning of this form. Please note that the Office of Information Practices (OIP) does not maintain the records of other agencies, and a requester must seek records directly from the agency it believes maintains the records. If the agency denies or fails to respond to your written request for records or if you have other questions regarding compliance with the UIPA, then you may contact OIP at (808) 586-1400, oip@hawaii.gov, or 250 South Hotel Street, Suite 107, Honolulu, Hawaii 96813.

REQUEST TO ACCESS A GOVERNMENT RECORD

JUN 08 2016 (1)

UG: 0
HW:
SV:

DATE: 6/1/2016

TO: Department of Heath Solid and Hazardous Waste Branch

FROM: Stacey Gray Weston Solutions, 841 Bishop Street Suite 2301 Honolulu, Hawaii 96813 email: Stacey.gray@westonsolutions.com Phone number: 808-275-2903 or cell 808-594-9891

Although you are not required to provide any personal information, you should provide enough information to allow the agency to contact you about this request. The processing of this request may be stopped if the agency is unable to contact you. Therefore, please provide any information that will allow the agency to contact you (name or alias, telephone or fax number, mailing address, e-mail address, etc.).

I WOULD LIKE THE FOLLOWING GOVERNMENT RECORD:

Describe the government record as specifically as possible so that it can be located. Try to provide a record name, subject matter, date, location, purpose, or names of persons to whom the record refers, or other information that could help the agency identify the record. A complete and accurate description of the government record you request will prevent delays in locating the record. Attach a second page if needed.

Weston is conducting a Phase I Environmental Site Assessment on the property located at 1020 Liliha Street Honolulu, Hawaii. Any records of CERCLA sites, RCRA sites, LUSTs, UST, spills, SHW and HEER sites on the property would be helpful.

I WOULD LIKE: (please check one or more of the options below)

☒ **To inspect the government record.**

☐ **A copy of the government record:** (Please check one of the options below.) See the back of this page for information about fees that you may be required to pay for agency services to process your record request. Note: Copying and transmission charges may also apply to certain options.

- ☐ Pick up at agency (**date and time**): _____
- ☐ Mail
- ☐ Fax (toll free and only if available)
- ☐ Other, if available (please specify): _____

☒ If the agency maintains the records in a form other than paper, please advise in which format you would prefer to have the record.

☒ Electronic ☐ Audio ☐ Other (please specify): _____

☐ Check this box if you are attaching a request for waiver of fees in the public interest (see waiver information on back).

- ☐ Request requires agency to create a summary or compilation from records, but requested information is not readily retrievable. (HRS § 92F-11(c))

☐ **Will be granted in part and denied in part,** OR ☐ **Is denied in its entirety**
Although the agency maintains the requested records, it is not disclosing all or part of them based on the exemptions provided in HRS § 92F-13 and/or § 92F-22 or other laws cited below.
(Describe the portions of records that the agency will not disclose.)

RECORDS OR INFORMATION WITHHELD	APPLICABLE STATUTES	AGENCY JUSTIFICATION

REQUESTER'S RESPONSIBILITIES:

You are required to (1) pay any lawful fees and costs assessed; (2) make any necessary arrangements with the agency to inspect, copy or receive copies as instructed below; and (3) provide the agency any additional information requested. If you do not comply with the requirements set forth in this notice within 20 business days after the postmark date of this notice or the date the agency makes the records available, you will be presumed to have abandoned your request and the agency shall have no further duty to process your request. Once the agency begins to process your request, you may be liable for any fees and costs incurred. If you wish to cancel or modify your request, you must advise the agency upon receipt of this notice.

OIP (rev. 12/1/2015)

METHOD & TIMING OF DISCLOSURE:

Records available for public access in their entireties must be disclosed within a reasonable time, not to exceed 10 business days from the date the request was received, or after receipt of any prepayment required. Records not available in their entireties must be disclosed within 5 business days after this notice or after receipt of any prepayment required. HAR § 2-71-13(c). If incremental disclosure is authorized by HAR § 2-71-15, the first increment must be disclosed within 5 business days of this notice or after receipt of any prepayment required.

Method of Disclosure:

☐ Inspection at the following location: _____

☐ As requested, a copy of the record(s) will be provided in the following manner:

- ☐ Available for pick-up at the following location: _____
- ☐ Will be mailed to you.
- ☐ Will be transmitted to you by other means requested: _____

Timing of Disclosure: All records, or the first increment if applicable, will be made available or provided to you:

☐ On _____, 20___.

☐ **After prepayment** of 50% of fees and 100% of costs, as estimated below.

For incremental disclosures, each subsequent increment will be disclosed within 20 business days after:

- ☐ The prior increment (if one prepayment of fees is required and received), or
- ☐ Receipt of each incremental prepayment, if prepayment for each increment is required.

Records will be disclosed in increments because the records are voluminous and the following extenuating circumstances exist:

- ☐ Agency must consult with another person to determine whether the record is exempt from disclosure under HRS chapter 92F.
- ☐ Request requires extensive agency efforts to search, review, or segregate the records or otherwise prepare the records for inspection or copying.
- ☐ Agency requires additional time to respond to the request in order to avoid an unreasonable interference with its other statutory duties and functions.
- ☐ A natural disaster or other situation beyond agency's control prevents agency from responding to the request within 10 business days.

ESTIMATED FEES & COSTS AND PAYMENT:

FEES: For personal record requests under Part III of chapter 92F, HRS, the agency may charge you for its costs only, and fee waivers do not apply.

For public record requests under Part II of chapter 92F, HRS, the agency is authorized to charge you fees to search for, review, and segregate your request (even if a record is subsequently found to not exist or will not be disclosed in its entirety). The agency must waive the first $30 in fees assessed for general requesters, OR in the alternative, the first $60 in fees when the agency finds that the request is made in the public interest. Only one waiver is provided for each request. *See* HAR §§ 2-71-19, -31 and -32.

COSTS: For either personal or public record requests, the agency may charge you for the costs of copying and delivering records in response to your request, and other lawful fees and costs.

PREPAYMENT: The agency may require prepayment of 50% of the total estimated fees and 100% of the total estimated costs prior to processing your request. If a prepayment is required, the agency may wait to start any search for or review of the records until the prepayment is received by the agency. Additionally, if you have outstanding fees or costs

from previous requests, including abandoned requests, the agency may require prepayment of 100% of the unpaid balance from prior requests before it begins any search or review for the records you are now seeking.

The following is an itemization of what you must pay, based on the estimated fees and costs that the agency will charge you and the applicable waiver amount that will be deducted:

For public record requests only:

Fees:	Search	Estimate of time to be spent: 15 ~~hours~~ mins ($2.50 for each 15-minute period)	$2.50
	Review & segregation	Estimate of time to be spent: _____ hours ($5.00 for each 15-minute period)	$ 30.00
	Fees waived	☑ general ($30), OR ☐ public interest ($60) (Only one waiver per request)	<$ ____>
	Other	_____ (Pursuant to HAR §§ 2-71-19 & 2-71-31)	$
	Total Estimated Fees:		$ 0

For public or personal record requests:

Costs:	Copying	Estimate of # of pages to be copied: _____ (@ $____ per page, pursuant to HRS § 92-21)	$
	Delivery	Postage	$
	Other	_____	$
	Total Estimated Costs:		$ 0

TOTAL ESTIMATED FEES AND COSTS from above: $ 0

☐ **The estimated fees and costs above are for the first incremental disclosure only. Additional fees and costs, and no further fee waivers, will apply to future incremental disclosures.**

☐ **PREPAYMENT IS REQUIRED** (50% of fees + 100% of costs, as estimated above) $

☐ **UNPAID BALANCE FROM PRIOR REQUESTS** (100% must be paid before work begins) $

TOTAL AMOUNT DUE AT THIS TIME $ 0

Payment may be made by: ☐ cash

☐ personal check payable to _____

☐ other _____

For questions about this notice or the records being sought, please contact the agency person named at the beginning of this form. Please note that the Office of Information Practices (OIP) does not maintain the records of other agencies, and a requester must seek records directly from the agency it believes maintains the records. If the agency denies or fails to respond to your written request for records or if you have other questions regarding compliance with the UIPA, then you may contact OIP at (808) 586-1400, oip@hawaii.gov, or 250 South Hotel Street, Suite 107, Honolulu, Hawaii 96813.

REQUEST TO ACCESS A GOVERNMENT RECORD

JUN 08 2016

DATE: 6/1/2016

TO: Department of Heath Solid and Hazardous Waste Branch

FROM: Stacey Gray Weston Solutions, 841 Bishop Street Suite 2301 Honolulu, Hawaii 96813 email: Stacey.gray@westonsolutions.com Phone number: 808-275-2903 or cell 808-594-9891

Although you are not required to provide any personal information, you should provide enough information to allow the agency to contact you about this request. The processing of this request may be stopped if the agency is unable to contact you. Therefore, please provide any information that will allow the agency to contact you (name or alias, telephone or fax number, mailing address, e-mail address, etc.).

I WOULD LIKE THE FOLLOWING GOVERNMENT RECORD:

Describe the government record as specifically as possible so that it can be located. Try to provide a record name, subject matter, date, location, purpose, or names of persons to whom the record refers, or other information that could help the agency identify the record. A complete and accurate description of the government record you request will prevent delays in locating the record. Attach a second page if needed.

Weston is conducting a Phase I Environmental Site Assessment on the property located at 1020 Liliha Street Honolulu, Hawaii. Any records of CERCLA sites, RCRA sites, LUSTs, UST, spills, SHW and HEER sites on the property would be helpful. No files

I WOULD LIKE: (please check one or more of the options below)

☒ **To inspect the government record.**

☐ **A copy of the government record:** (Please check one of the options below.) See the back of this page for information about fees that you may be required to pay for agency services to process your record request. Note: Copying and transmission charges may also apply to certain options.

- ☐ Pick up at agency (**date and time**): _____
- ☐ Mail
- ☐ Fax (toll free and only if available)
- ☐ Other, if available (please specify): _____

☒ If the agency maintains the records in a form other than paper, please advise in which format you would prefer to have the record.

☒ Electronic ☐ Audio ☐ Other (please specify): _____

☐ Check this box if you are attaching a request for waiver of fees in the public interest (see waiver information on back).

WESTON	Weston Solutions, Inc.

EXECUTIVE SUMMARY

This report presents the results of the Phase II Environmental Site Assessment (ESA) activities conducted by Weston Solutions, Inc. (WESTON®) for MWH Partners, LLC. at the subject property located at 1020 Liliha Street in Honolulu, HI. A Property Location Map is provided as **Figure 1**. The subject property is approximately 14.8 acres in size. The owner of the property is Hawaii Public Housing Authority (HPHA). The property is developed with 35 multi-story buildings containing multi-family housing. The current housing units have been located on the subject property since the early 1950s. A review of the Sanborn maps indicates the subject property has been developed since at least 1914. A Property Vicinity Map is provided as **Figure 2.**

The objective of the Phase II ESA is to evaluate the Recognized Environmental Conditions (RECs) at locations identified during WESTON's Phase I ESA, conducted in June 2016. The Phase II ESA activities were conducted in April 2018 and included; the collection and analyses of soil samples from 14 soil borings, collection and analysis of surface soils from three decision units (DUs), collection and analysis of groundwater samples collected from four newly installed temporary down gradient wells as shown on the Sample Location Map, **Figure 3.** Photographs of the assessment activities are provided in **Appendix A**. All drilling activities were conducted by licensed water well driller, GeoTek Hawaii, Inc (Geotek), in accordance with State requirements. Collected samples were relinquished directly to Hawaii Analytical Laboratory, LLC (Hawaii Analytical) and Agriculture & Priority Pollutants Laboratories, Inc. (APPL) for analyses.

Multi incremental (MI) sampling procedures were used to evaluate the presence of lead in surface soil at three decision units (DUs), DU-6 (Building 6), DU-21 (Building 21) and DU-35 (Building 35). The DU locations were selected to represent a 10% subset of the all buildings on site and to ensure that all exterior building materials are represented. Samples from the DUs were collected by combining 60 small increments of soil around the base of each building. Increments were collected from the surface soils along the building drip line 3-6 inches deep, as this is the where lead contamination is usually present due to weathering (rain and wind).

Surface and subsurface soil samples were collected at 14 soil boring locations and analyzed for total petroleum hydrocarbons (TPH) in the middle distillate range (TPH-D), TPH in the residual distillate range (TPH-R), TPH in the gasoline range (TPH-G), volatile organic compounds (VOCs), mineral spirits, organochlorine (OC) pesticides, and lead.

Groundwater samples were collected from the temporary wells at four soil boring locations and analyzed for: TPH-D and TPH-R by United States Environmental Protection Agency (EPA)

Method 8015B, and TPH-G and VOCs by EPA Method 8260B, mineral spirits by EPA Method 8015B, OC pesticides by EPA Method 8081A, and lead by EPA Method 6010B. GW-01 was re-sampled to verify previous bromomethane result.

Sample results were evaluated against Hawaii Department of Health (HDOH) Environmental Action Levels (EALs) to determine the risk to human health and the environment.

CONCLUSIONS

The conclusions of the Phase II ESA activities are summarized as follows:

Soil

- No soil sample results collected from soil borings are above HDOH Unrestricted EALs.
- Two out of three decision units (DU-06 and DU-35) tested above the HDOH Unrestricted EAL for lead.

Groundwater

- One groundwater sample result (GW-01) was above the HDOH Unrestricted EAL for bromomethane. However, upon re-sample of GW-01, the bromomethane result was below the Unrestricted EAL, making all groundwater results below HDOH Unrestricted EALs for all analyzed contaminates.

RECOMMENDATIONS

Based on the results and conclusions of the Phase II ESA, lead has been identified in soil at the subject property at concentrations above the Unrestricted Use EAL that may require additional activities to be performed. WESTON recommends the following:

- Additional multi-incremental sampling should be performed around all buildings in order to evaluate the lead contamination throughout the Site.
- All contaminated soil above the Unrestricted Use EAL should be excavated and disposed of. Waste characterization soil samples should be collected and analyzed by toxicity characteristic leaching procedure (TCLP) to ensure proper disposal at an appropriate landfill.

1 INTRODUCTION

In June 2016, Weston Solutions, Inc. (WESTON®), conducted a Phase I Environmental Site Assessment (ESA) at subject property located at 1020 Liliha Street in Honolulu, HI. The results of the Phase I ESA necessitated a Phase II ESA to further evaluate the potential of subsurface impacts of contaminants of concern (COCs) in the soil and groundwater. The Site location is shown on **Figure 1.** This report presents the results of the Phase II ESA activities conducted for MWH Partners, LLC.

The objective of the Phase II ESA is to evaluate the Recognized Environmental Conditions (RECs) at locations identified during WESTON's Phase I ESA. WESTON will evaluate Site environmental concerns to facilitate redevelopment.

2 BACKGROUND

The subject property is located in a densely developed mixed use area north of downtown Honolulu. The property is approximately 14.8 acres developed with 35 multi-story, multi-family residential housing units. The housing units have been located on the subject property since the early 1950s. The owner of the property is Hawaii Public Housing Authority (HPHA).

A review of historical Sanborn maps indicates the property has been developed since at least 1914. The property is shown on the 1914 map to be residential and tenement housing. Other notable historical uses for portions of the property included the following:

- 1914 - Auto painting, Hawaiian Soy Company, candy factory, mattress factory
- 1927 and 1950 - Auto storage
- 1950 - Auto repair

3 PHASE I ESA

A Phase I ESA site visit was performed on 15 June 2016, by Lisa Waskom and Stacey Gray with WESTON (WESTON, 2016). Based on the results of the Phase I ESA the following potential sources of contamination were identified at the Site:

- Various auto repair and service facilities, which are historically associated with total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs). The auto painting shop may have used lead-based paint (LBP) onsite.
- Dry cleaning and other laundry facilities, which could cause releases of VOCs or mineral spirits.
- Historical gardens may have used organochlorine (OC) pesticides on the property.

- LBP or lead-containing paint may have been released to the surrounding environment based on the age of the buildings.

4 PHASE II ESA FIELD INVESTIGATION

To facilitate redevelopment of the property, WESTON evaluated potential environmental concerns. Based on the results of the Phase I ESA, the following COCs were identified: TPH in the middle distillate range (TPH-D), TPH in the residual distillate range (TPH-R), TPH in the gasoline range (TPH-G), VOCs, mineral spirits, OC pesticides, and lead.

Sample results were evaluated against Hawaii Department of Health (HDOH) Environmental Action Levels (EALs) to determine the risk to human health and the environment.

Phase II ESA activities performed by WESTON included the collection and analyses of soil samples from 14 soil borings, and collection and analysis of groundwater samples from four temporary wells. WESTON also collected three multi incremental surface soil samples around three of the buildings on Site.

Photographs of the assessment activities are provided in **Appendix A**. All drilling activities were conducted by GeoTek Hawaii, Inc. (GeoTek) in accordance with HDOH Technical Guidance Manual (TGM).

4.1 MULTI INCREMENTAL SOIL SAMPLING

On 28 March 2018, WESTON mobilized to 1020 Liliha Street to collect soil samples as part of the Phase II ESA. The Hawaii Hazard Evaluation and Emergency Response (HEER) office encourages the use of multi incremental (MI) sample collection strategies to enhance sample representativeness in the investigation of contaminated soil. Based on the construction date of the building prior to 1978, it was anticipated that the paint on the buildings contained LBP). Over time LBP may have been released to soil in proximity to the buildings. MI sampling procedures were used to evaluate the presence of lead in surface soil at depths ranging from 0 to 6 inches below ground surface (bgs). Three decision units (DUs) were identified on the Site, DU-6 (Building 6), DU-21 (Building 21) and DU-35 (Building 35). The targeted areas for soil sample collection was identified as surface soil 3 to 6 inches horizontally from the base of the building at the approximate location of the dripline of the buildings. Three MI samples were collected around these buildings. The samples were prepared by collecting and combining 60 small increments of soil from evenly spaced locations within the targeted DUs. Samples were identified as DU-06, DU-21, and DU-35, based on the existing building number. Triplicate MI samples were collected from Building 35 to confirm laboratory results.

4.2 SOIL SAMPLING

On 2 and 3 April 2018, WESTON mobilized to the Site to conduct Phase II ESA activities including the collection of soil samples from a total of 14 soil borings (SB), SB-01 through SB-14. The borings were installed in areas of the property with the potential for contamination from historical operations and chemical use. The borings were advanced using direct push drilling to approximately 10 feet (ft) bgs by GeoTek. WESTON field personnel provided oversight to the installation of the borings and temporary monitoring wells. Soil was not logged on boring logs unless notable conditions were observed. Samples were collected based a photo-ionization detector (PID) screening and/or visual inspection. The locations of the soil borings are shown on the Sample Location Map, **Figure 3.**

During the installation of the soil borings, a layer of hard rock, likely basalt, was encountered over most of the Site. The thick layer of basalt was encountered at depths ranging from 4 ft to 12 ft bgs.

The soil borings were sampled continuously using direct-push technology drilling equipment where applicable, or hand auger sampling using micro-core samplers. Soil samples were examined for lithology and indications of contamination, such as odor and staining, and were screened for organic vapors with a hand-held PID. The samples were immediately screened with the PID after removing the sample from the sampling tool using the ambient temperature headspace analysis method. PID readings observed were generally low in the soil borings, and no significant PID readings, odors, or staining was observed in the soil samples. PID readings are provided in **Table 4-1**.

During the sampling event, soil samples were collected and analyzed from each soil boring from the intervals shown in **Table 4-2**. The intervals were selected at the depth interval that exhibited the highest PID reading, or other field evidence of contamination, such as odors or staining. If PID readings were the same at multiple intervals, the deepest interval was selected as the sample, unless field evidence of contamination suggested otherwise. Concentrations of OC pesticides are generally expected to lie within the top 2 ft of soil, and the highest concentrations are typically in the 0 to 6 inch interval and/or 6 to 12 inch interval. The pesticide samples were collected from the 0 to 2 foot interval in areas where there were historically gardens.

SB-13	4 to 6
SB-14	4 to 6

Following completion of drilling, each soil boring was immediately plugged and abandoned unless a groundwater well was installed.

4.3 GROUNDWATER SAMPLING

Field activities conducted by WESTON at the subject property included the installation of temporary monitoring wells on the southeastern edge of the Site. During the installation of the soil borings, a layer of hard rock was encountered over most of the Site. Monitoring wells could not be installed at 10 of the boring locations due the rock encapsulating the groundwater ranging at depths ranging from 4 to 11 ft bgs. The thick layer of rock was at shallower depths on the

northwestern edge of the Site and deeper depths moving southeast across the Site. Geotek attempted auguring through the thick rock (as opposed to direct push) but were unsuccessful.

A total of four temporary wells were installed to assess potential COC impacts to groundwater. The temporary wells were installed using a track mounted drilling rig. The wells were constructed of 1-inch diameter, polyvinyl chloride (PVC) casing and five ft of screen. A filter pack was installed by pouring silica sand directly into the boring hole from the ground surface. The location of the temporary wells were recorded using Global Positioning System (GPS) coordinates). The well locations are shown on **Figure 3 - Sampling Location Map.** Three times the volume of water was purged from the well prior to sampling, per HDOH's TGM.

Groundwater sampling was conducted using low-flow sampling methodology at flow rates of approximately 100 to 190 milliliters per minute. At regular intervals, the purged groundwater was monitored for temperature, hydrogen ion concentration, specific conductivity, turbidity, dissolved oxygen, and oxidation-reduction potential. Water quality parameters were monitored until the parameters were within those established by HDOH's TGM and the United States Environmental Protection Agency (EPA) groundwater sampling guideline (EPA, 2002). Once groundwater parameter stabilization was achieved, the groundwater samples were collected. However, stabilization at temporary groundwater well GW-13 was not achieved due to an extremely slow flow rate. At the existing flow rate at this well, the time to achieve stabilization would be in excess of 11 hours. As a result, the GW-13 samples were collected from the well without stabilization and only sampled for TPH-G, TPH-D, TPH-R, and mineral spirits.

Prior to groundwater sample collection from the temporary monitoring wells, the depth of the standing water and the total depth of the borehole was measured using a water-level indicator. Groundwater was encountered at depths ranging from 6.50 to 9.13 ft bgs.

GW-01 was re-sampled on 5 May 2018 and analyzed for VOCs to verify the bromomethane level in the groundwater at this location.

4.4 LABORATORY ANALYSES

MI samples were collected around three representative buildings and analyzed for lead by EPA Method 6010B at Hawaii Analytical Laboratory, LLC (Hawaii Analytical).

Soil boring samples were screened in the field for VOCs using a PID and inspected for visible evidence of contamination (e.g., discoloration or sheen). All soil samples collected were analyzed for TPH-D and TPH-R by EPA Method 8015B and TPH-G and VOCs by EPA Method

8260B. Based on the historical use of the Site, select samples were analyzed for mineral spirits by EPA Method 8015B, OC pesticides by EPA Method 8081A, and lead by EPA Method 6010B.

Groundwater samples were collected from the temporary wells at soil borings SB-01, SB-02, SB-03, and SB-13, and labelled GW-01, GW-02, GW-03, and GW-13 respectively. The groundwater samples collected were analyzed for: TPH-D and TPH-R by EPA Method 8015B, and TPH-G and VOCs by EPA Method 8260B, mineral spirits by EPA Method 8015B, OC pesticides by EPA Method 8081A, and lead by EPA Method 6010B. The re-sample of GW-01 was labelled GW-01-2 and analyzed for VOCs by EPA Method 8260B. The samples were analyzed by Agriculture & Priority Pollutants Laboratories, Inc. (APPL).

5 GEOLOGY AND HYDROGEOLOGY

The Iwilei area is located on the southeast coastal plain of the Island of Oahu, which was formed on the eroded banks of two shield volcanoes, the Koolau and the Waianae. The volcanic series underlying the Site was formed by rapid succession of volcanic flows with little evidence of erosion between eruptive events. The mode of emplacement produced vesicular basalt of high permeability that is referred to as the basal aquifer (Visher and Mink, 1964).

The basal aquifer is highly permeable as a result of layers of `a`a flows, lava tubes in pahoehoe flows, irregular openings between and within the flows, and contraction joints (Visher and Mink, 1964). Overlying the basal aquifer is a wedge-shaped sequence of sedimentary rocks referred to as the Caprock unit (Wentworth, 1951). The Caprock unit has a low overall permeability, which impedes groundwater discharge from the underlying volcanic aquifers to the ocean. Thus, the unit serves as a confining layer to the basal aquifer (Hufen et al., 1980). This may have been why the groundwater was inaccessible across much of the Site.

The soil at the Site is classified by the United States Department of Agriculture Soil Conservation Service as part of the Lualualei-Fill Land-Ewa Association or fill land mixed (Foote et al., 1972).

Groundwater was encountered at the four temporary wells at depths ranging from 6.50 to 9.13 ft bgs which is a consistent groundwater depth to the rest of the Iwilei District.

6 ANALYTICAL RESULTS

6.1 ANALYTICAL DATA QUALITY REVIEW

WESTON performed a data quality review of the soil and groundwater samples analytical data reported by APPL, Inc. Data qualifiers assigned by the laboratory based on their internal data

quality review were evaluated for appropriateness in the context of the data quality objectives outlined in the scope of work. Sample condition, holding times, and standard laboratory quality control checks were evaluated to assess the overall precision, accuracy, and completeness of the data.

Samples were delivered to the laboratory in good condition. All holding times were met and no target analytes were detected in method blanks, surrogate, and laboratory spike recoveries were within control limits. All laboratory-assigned J-flags denoting estimated values due to detections below reporting limits were retained. Additionally, VOC results in soil sample SB-09 and groundwater sample GW-01 were qualified "J" (estimated values) due to exceedances in relative percent differences between field replicates of this sample. All of the laboratory method detection limits (MDLs) were below the respective Tier 1 EALs, therefore none of the "None Detected" values were qualified. None of the data were rejected. This data set is 100% complete, with all analytical results considered valid and useable in the context of the project goals.

6.2 SOIL RESULTS

A summary of the analytical results for soil samples collected to support the Phase II ESA is provided as **Tables 6-1, 6-2, and 6-3**. Sample results were compared to the Unrestricted HDOH EALs. All laboratory method detection limits (MDLs) were below HDOH Unrestricted EALs. Copies of the analytical reports and chain-of-custody documentation are provided in **Appendix B**.

TPH-G, TPH-R, TPH-D, Mineral Spirits, OC Pesticides, VOCs and lead were reported at concentrations in soil boring samples below the Unrestricted HDOH EALs. Results for all three TPH ranges, Mineral Spirits, and lead are provided in **Table 6-1,** and for OC Pesticides – in **Table 6-2**. VOC results are not tabulated due to the absence of detections in all samples with the exception of xylenes in the field duplicate of SB-09 at estimated 0.24 milligrams per kilogram (mg/kg), which is below the Tier 1 EAL for xylenes (2.1 mg/kg). Based on historical recognized environmental conditions, SB-02 was the only soil boring analyzed for lead.

Table 6-1

Unrestricted Use EAL	*3.9*	*17*	*1.8*	*2.5*	*3.8*	*1.3*	*0.2*	*16*

Notes:
ND: Not detected above laboratory Method Detection Limits.
NS: Not sampled per historical recognized environmental conditions.
J: Estimated value.

Lead concentrations exceeded the Unrestricted HDOH EALs in two of the decision units, DU-06 and DU-35. Multi incremental sampling results are provided in **Table 6-3**.

Table 6-3

Sample ID	Lead Result (mg/kg)
DU-06	240
DU-21	130
DU-35	250
Unrestricted Use EAL	*200*

Comparing the data to HDOH Unrestricted EALs is appropriate to determine whether the concentrations of COCs in soil will be protective for all receptors and exposure pathways to all population types. When concentrations are below the Unrestricted EAL, no further action is required. When concentrations are above the Unrestricted EAL they are considered too hazardous for residential use. The results for lead at DU-06 and DU-35 are above HDOH's Unrestricted Use EAL which indicates the lead concentrations around the buildings are dangerous to human health. Sample results above the EALs are shown on **Figure 4.**

6.3 GROUNDWATER RESULTS

A summary of the analytical results for the groundwater samples for VOCs is provided in **Table 6-5**. The table also includes the HDOH Unrestricted EALs for comparison purposes. Groundwater results for TPH-G, TPH-D, TPH-R, and mineral spirits are not included in the table because none of these COCs were detected in any of the groundwater samples. The concentration of lead in sample GW-02 is less than the laboratory MDL. All of the laboratory method limits are below the HDOH Unrestricted Use EALs. Copies of the analytical reports and chain-of-custody documentation are provided in **Appendix C**.

Table 6-4

COC/Sample ID	GW-01	GW-02	GW-03	GW-01-2	*Unrestricted Use EAL*

Xylenes (µg/L)	ND	ND	ND	ND	*20*
Bromomethane (µg/L)	8.1 J	2.3	1.6	0.62 J	*7.6*

Chloromethane (µg/L)	120 J	52	47	5.4	*190*

Notes:
ND: Not detected above laboratory MDL.
J: Estimated value.

The only VOCs detected in groundwater samples are chloromethane and bromomethane. Low levels of chloromethane occur naturally in the environment (ATSDR, 1998) and none of the groundwater results exceeded the Tier 1 EAL, therefore, it is not a chemical of concern at this site. The bromomethane concentration in one sample (GW-01) originally exceeded the Tier 1 EAL. However, the re-sample of GW-01, showed Bromomethane below the Tier 1 EAL at this location. Bromomethane is widely used as a fumigant in soil to control fungi, nematodes, and weeds; and in storage facilities to control insects and rodents (ATSDR, 1992; Sittig, 1985). Its most prevalent use is as soil fumigant. Structural non-food treatments (e.g., residential buildings) are reportedly no longer performed (USEPA, 2009). The detection of Bromomethane in groundwater on site at that location can be attributable to the past fumigations for weed and pest control.

6.4 AFFECTED MATERIALS REQUIRING A RESPONSE ACTION

Concentrations of lead exceeding the HDOH Unrestricted Use EALs were identified in samples collected at DU-06 and DU-35. The surface soil around the buildings on site requires a response action. Additional testing should be performed around all buildings in order to confirm the extent of the lead contamination.

After the extent of lead contamination is identified, the lead affected soil with concentrations exceeding the Unrestricted EAL should be excavated and disposed. Waste characterization soil samples were collected and analyzed by toxicity characteristic leaching procedure (TCLP) to ensure proper disposal at an appropriate landfill.

7 CONCLUSIONS

The conclusions of the Phase II ESA activities are summarized as follows:

Soil

- No soil sample results collected from soil borings are above HDOH Unrestricted EALs.
- Two out of three decision units (DU-06 and DU-35) tested above the HDOH Unrestricted EAL for lead.

Groundwater

- One groundwater sample result (GW-01) was above the HDOH Unrestricted EAL for bromomethane. However, upon re-sample of GW-01, the bromomethane result was

below the Unrestricted EAL, making all groundwater results below HDOH Unrestricted EALs for all contaminates tested for.

8 RECOMMENDATIONS

Based on the results and conclusions of the Phase II ESA, lead has been identified in soil at the subject property at concentrations above 200 mg/kg that may require additional evaluation and removal. WESTON recommends the following:

- Additional multi-incremental sampling should be performed around all buildings in order to evaluate the lead contamination throughout the Site.
- All contaminated soil above the Unrestricted Use EAL should be excavated and disposed of. Excavated soil should be tested for TCLP to ensure that it is disposed of properly.

All Quality Control data are acceptable unless otherwise noted.
MRL for lead air is 5ug.
MRL for lead wipe is 10ug.
MRL for lead paint or soil is 40 mg/kg for a 0.25g sample.

General Comments
The sample[s] analysis subject of this analytical report were conducted in general accordance with the procedures associated with the "analytical method" referenced above. Modifications to this methodology may have been made based upon the analyst's professional judgment and / or sample matrix effects encountered. The analysis of sample relates only to the sample analyzed, and may or may not be representative of the original source of the material submitted for our analysis. All analysts participate in interlaboratory quality control testing to continuously document profiency. This report is not to be duplicated except in full without the expressed written permission of Hawaii Analytical Laboratory. This report should not be construed as an endorsement for a product or a service by the AIHA LAP, LLC or any affiliated organizations. Sample and associated sampling / collection data is reported as provided by client. TWA values have been calculated based on information supplied by the client that the laboratory has not independently verified. Results have not been corrected for blank determinations unless noted in remarks. Unless otherwise indicated the sample condition at the time of receipt was acceptable.

Attn: Christine Kline

Subject: Report of Data: 85411

Results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Dear Ms. Kline:

Sixteen soil samples for the "Mayor Wright" project were received April 6, 2018, at 2.5°C. Written results are being provided on this April 25, 2018, for the requested analyses. All holding times were met.

For the EPA 8015B analysis, the samples were extracted according to EPA method 3550B.

For the EPA 8081A analysis, the samples were extracted according to EPA method 3550B.

For the EPA 8260B analysis, the samples were purged according to EPA method 5035.

For the EPA 6010B analysis, the sample was digested according to EPA method 3050B.

No unusual problem or complication was encountered with this sample set.

If you have any questions or require further information, please contact us at your convenience. Thank you for choosing APPL, Inc.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. These test results meet all requirements of NELAC. Release of the hard copy has been authorized by the Laboratory Manager or her designee, as verified by the following signature.

Attn: Christine Kline

Subject: Report of Data: 85427

Results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Dear Ms. Kline:

One soil and five water samples for the "Mayor Wright" project were received April 07, 2018, at 1.3°C. Written results are being provided on this April 26, 2018, for the requested analyses. All holding times were met.

For the EPA 8015B analysis, the water samples were extracted according to EPA method 3510C, and the soil sample was extracted according to EPA method 3550B.

For the EPA 8082 analysis, the soil sample was extracted according to EPA method 3550B.

For the EPA 8260B analysis, the water samples were purged according to EPA method 5030B, and the soil sample was purged according to EPA method 5035.

For the EPA 6010B analysis, the water sample was digested according to EPA method 3010A, and the soil sample was digested according to EPA method 3050B.

For the EPA 7471A analysis, the sample was digested according to the method.

No unusual problem or complication was encountered with this sample set.

If you have any questions or require further information, please contact us at your convenience. Thank you for choosing APPL, Inc.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. These test results meet all requirements of NELAC. Release of the hard copy has been authorized by the Laboratory Manager or her designee, as verified by the following signature.

Attn: Christine Kline

Subject: Report of Data: 85903

Results in this report apply to the sample analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Dear Ms. Kline:

One water sample for the "Mayor Wright" project was received May 26, 2018, at 3.0°C. Written results are being provided on this June 13, 2018, for the requested analysis. All holding times were met.

For the EPA 8260B analysis, the sample was purged according to EPA method 5030B.

No unusual problem or complication was encountered with this sample set.

If you have any questions or require further information, please contact us at your convenience. Thank you for choosing APPL, Inc.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. These test results meet all requirements of NELAC. Release of the hard copy has been authorized by the Laboratory Manager or her designee, as verified by the following signature.

BIOLOGICAL RESOURCES SURVEY

for the

MAYOR WRIGHT HOMES REDEVELOPMENT PROJECT

HONOLULU, O'AHU

by

Robert W. Hobdy
Environmental Consultant
Kokomo, Maui
May 2016

Prepared for:
PBR Hawaii

INTRODUCTION

The Mayor Wright Homes Redevelopment Project is located in Honolulu on an approximately 14.5 acre block between Vineyard Boulevard, Liliha Street, King Street and Pua Lane. The subject area was the focus of a biological resources study conducted in fulfillment of environmental requirements of the planning process.

SITE DESCRIPTION

The project area lies on a gently sloping coastal plain at elevations between 10 and 22 feet above sea level. It lies within a commercial and light industrial urban setting. The area includes 37 two story and three story low income condominium structures with about 400 units. Vegetation consists mainly of lawns and some hedges, trees and shrubs. Soils are characterized as Ewa silty clay loam, moderately shallow, 1 – 2 % slopes (Foote et al, 1972) that overlies coral limestone substrate. Rainfall averages around 30 inches per year (Armstrong, 1983).

SURVEY OBJECTIVES

This report summarizes the findings of a biological resources survey of the proposed Mayor Wright Homes Redevelopment Project which was conducted in May 2016. The objectives of the survey were to:

1. Document what plant and animal species occur on the property or may likely occur in the existing habitat.

2. Document the status and abundance of each species.

3. Determine the presence or likely occurrence of any native flora and fauna, particularly any that are federally listed as Threatened or Endangered. If such occur, identify what features of the habitat may be essential for these species.

4. Determine if the project area contains any special habitats which if lost or altered might result in a significant negative impact on the flora and fauna in this part of the island.

BOTANICAL SURVEY REPORT

SURVEY METHODS

A walk-through botanical survey method was used selecting routes to cover the entire area and all habitat types. Areas most likely to harbor native or rare plants were more intensively examined. Notes were made on plant species, distribution and abundance as well as on terrain and substrate.

DESCRIPTION OF THE VEGETATION

The vegetation was made up primarily of a variety of low maintenance grasses and urban weeds that survive mowing. In addition, there are hedges and a variety of ornamental plantings around some of the units. A total of 91 plant species were recorded during the survey. Not recorded were ornamental plants in pots around unit entrances.

Eight plant species were common throughout the project, nut sedge (*Cyperus rotundus*), Bermuda grass (*Cynodon dactylon*), wiregrass (*Eleusine indica*), Dallis grass (*Paspalum dilatatum*), pink tecoma (*Tabebuia heterophylla*), pepperwort (*Lepidium virginicum*), bracted fanpetals (*Sida ciliaris*) and scarlet spiderling (*Boerhavia coccinea*). Three species were of Polynesian introduction, kalo (*Colocasia esculenta*), ki (*Cordyline fruticosa*) and ‘ihi’ai (*Oxalis corniculata*). About half the plants recorded were purposely planted ornamental species and a few food plants being raised by tenants.

Not a single native plant was found during the survey in this densely populated urban environment.

DISCUSSION AND RECOMMENDATIONS

The vegetation within the project area consists entirely of non-native plants. The three plants of Polynesian origin were, likewise, common and had been purposely introduced into the landscape.

No federally listed Endangered or Threatened plant species (USFWS, 2016) were found in the project area, and none were found that are candidates for such status. No special habitats were identified within the project area. This project area lies within the heart of urban Honolulu, distant from any natural habitats.

Because of the above existing conditions, it has been determined that there is little of botanical concern in the project area, and that the anticipated disturbances associated with the proposed redevelopment work are not expected to have a significant negative impact on the botanical resources in this part of O'ahu.

It is recommended, however, that coastal and lowland native plant species might be incorporated into future landscape designs.

PLANT SPECIES LIST

Following is a checklist of all those vascular plant species inventoried during the field studies. Plant families are arranged alphabetically within two groups: Monocots and Dicots. Taxonomy and nomenclature of the flowering plants are in accordance with Wagner et al. (1999) and Staples & Herbst (2005).

For each species, the following information is provided:

1. Scientific name with author citation.

2. Common English or Hawaiian name.

3. Bio-geographical status. The following symbols are used:

   endemic = native only to the Hawaiian Islands; not naturally occurring anywhere else in the world.

   indigenous = native to the Hawaiian Islands and also to one or more other geographic area(s).

   Polynesian introduction = plants introduced to Hawai’i in the course of Polynesian migrations and prior to western contact.

   non-native = all those plants brought to the islands intentionally or accidentally after western contact.

4. Abundance of each species within the project area:

   abundant = forming a major part of the vegetation within the project area.

   common = widely scattered throughout the area or locally abundant within a portion of it.

   uncommon = scattered sparsely throughout the area or occurring in a few small patches.

   rare = only a few isolated individuals within the project area.

SCIENTIFIC NAME	COMMON NAME	STATUS	ABUNDANCE
MONOCOTS			
AMARYLLIDACEAE (Amaryllis Family)			
Crinum augustum Roxb.	Queen Emma lily	non-native	uncommon
ARACACEAE (Aroid Family)

Murraya paniculata (L.) W. Jack	mock orange	non-native	rare
VERBENACEAE (Verbena Family)			
Stachytarpheta cayennensis (Rich.) Vahl	nettle-leaved vervain	non-native	rare

FAUNA SURVEY REPORT

SURVEY METHODS

A walk-through fauna survey method was conducted in conjunction with the botanical survey. All parts of the project area were covered. Field observations were made with the aid of binoculars and by listening to vocalizations. Notes were made on species, abundance, activities and location as well as observations of trails, tracks, scat and signs of feeding. In addition an evening visit was made to the area to record crepuscular activities and vocalizations and to see if there was any evidence of occurrence of the Hawaiian hoary bat (*Lasiurus semotus*) in the area.

RESULTS

MAMMALS

Just one non-native mammal species was observed in the project area during two site visits. Taxonomy and nomenclature follow Tomich (1986). Domestic cats (*Felis catus*) were seen within the area. Domestic dogs (*Canis familiaris*) may also frequent the area as leashed animals with their owners who are walking or jogging. Other mammal species one might expect to see in the area include mice (*Mus domesticus*), rats (*Rattus* spp.) and mongoose (*Herpestes auropunctatus*).

An evening survey was conducted within the project area using a bat detecting device (Batbox IIID), set to the frequency of 27,000 Hertz that the Hawaiian hoary bats are known to use for echolocation in their pursuit of nocturnal flying insects. No bats were detected.

BIRDS

Bird life was modest in the diversity of species observed but fairly well represented in total numbers. Taxonomy and nomenclature follow American Ornithologists' Union (2014). A total of five non-native bird species were observed during two site visits. Four non-native bird species were common in the project area, the common myna (*Acridotheres tristis*), the zebra dove (*Geopelia striata*), the spotted dove (*Streptopelia chinensis*) and the house sparrow (*Passer domesticus*). A couple of chickens (*Gallus gallus*) were also present.

INSECTS

Insect life was sparse throughout the project area due primarily to the lack of habitat diversity. Just four non-native insect species were observed during two site visits. Taxonomy and nomenclature follow Nishida et al (1992). One species was found to be abundant throughout the area, the dung fly (*Musca sorbens*). The long tailed blue butterfly (*Lampides boeticus*) was common. Two other insect species were rare. No native insect species were found.

REPTILES

One non-native reptile, the brown anole lizard (*Anolis sagrei*) was seen on a hollow tile wall.

DISCUSSION AND RECOMMENDATIONS

The Mayor Wright Homes Redevelopment Project area is a densely populated residential complex that is sparsely vegetated. This discourages many forms of wildlife from utilizing the habitat. All types of wildlife, including mammals, birds, insects and reptiles, were poorly represented. Only a few hardy species, adapted to human activities, were observed in the project area.

No native wildlife species were observed in the project area during the survey. All mammal, bird, insect and reptile species were common non-native species that are of no special conservation concern. As a result, no federal or state listed endangered or threatened wildlife species occur in the project area, and no species were found that are candidates for such status.

The endemic and protected Hawaiian hoary bat was not detected during the survey. These bats are not known from urban Honolulu and are not expected to occur in the project area.

No Endangered nēnē or Hawaiian goose are known from Oahu except in captivity and are not expected in the project area.

No Blackburn's sphinx moths (*Manduca blackburni*) were found during the survey. They are not presently known from Oahu and none of their special host plants were found either.

No protected waterbirds, the ae'o or Hawaiian stilt (*Himantopus mexicanus knudseni*), 'alae ke'oke'o or Hawaiian coot (*Fulica alai*), 'alae'ula or common moorhen (*Gallinula chloropus sandvicensis*) or the koloa or Hawaiian duck (*Anas wyvilliana*) were seen during the survey and no suitable wetland habitat occurs on or near to the project area.

None of the endangered manu o kū or white tern (*Gygis alba rothschildi*) were seen during the survey. while their numbers have been increasing in urban Honolulu in recent years, the project area does not represent good habitat for these terns.

Hawaiian petrels (*Pterodroma phaeopygia sandwichensis*) and Newell's shearwaters (*Puffinus auricularis newellii*), (collectively known as seabirds) may transit over the project area when flying between the ocean and nesting sites in the mountains during their breeding season (March through November). Fatalities to these seabirds resulting from collisions with artificial structures that extend above the surrounding vegetation have been documented in Hawaii where high densities of transiting seabirds occur. Additionally, artificial lighting such as floodlighting for construction work can adversely impact seabirds by causing disorientation which may result in collision with utility lines, buildings, fences and vehicles. Fledgling seabirds are especially affected by artificial lighting and have a tendency to exhaust themselves while circling the light sources and become grounded. Too weak to fly, these birds become vulnerable to predation by predators such as mongoose (*Herpestes auropunctatus*), cats (*Felis catus*) and dogs (*Canis familiaris*). These threats can be minimized by the shielding of any outdoor lighting so that the light is visible only from below.

No other recommendations regarding wildlife are deemed necessary.

Because of the above existing conditions, it has been determined that there is little of wildlife concern in the project area, and that the anticipated disturbances associated with the proposed redevelopment work are not expected to have a significant negative impact on the wildlife resources in this part of Oahu.

ANIMAL SPECIES LIST

Following is a checklist of the animal species inventoried during the field work. Animal species are arranged in descending abundance within four groups: Mammals, Birds, Insects and Reptiles. For each species the following information is provided:

1. Common name.

2. Scientific name.

3. Bio-geographical status. The following symbols are used:

   endemic = native only to Hawaii; not naturally occurring anywhere else in the world.

   indigenous = native to the Hawaiian Islands and also to one or more other geographic area(s).

   non-native = all those animals brought to Hawaii intentionally or accidentally after western contact.

   migratory = spending a portion of the year in Hawaii and a portion elsewhere. In Hawaii the migratory birds are usually in the overwintering/non-breeding phase of their life cycle.

4. Abundance of each species within the project area:

   abundant = many flocks or individuals seen throughout the area at all times of day.

   common = a few flocks or well scattered individuals throughout the area.

   uncommon = only one flock or several individuals seen within the project area.

   rare = only one or two seen within the project area.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Island of Oahu, Hawaii
Survey Area Data: Version 14, Sep 17, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Aug 14, 2016

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hakim Ouansafi, Executive Director
Hawai'i Public Housing Authority
1002 North School Street
Honolulu, HI 96817

Dear Mr. Ouansafi:

SUBJECT: **HRS Chapter 6E-8 & NHPA Section 106 Historic Preservation Review**
Mayor Wright Homes Redevelopment
521 North Kukui Street Honolulu, HI 96817
Owner Name: State of Hawaii
Honolulu Ahupua'a, Kona District, Island of O'ahu
TMK: (1) 1-7-029:003

Thank you for the opportunity to comment on this request from the Hawaii Public Housing Authority (HPHA) for Chapter 6E-42, HRS, and Section 106, NHPA, review. This letter is in response to SHPD's request for Reconnaissance Level Surveys (RLS) for architectural resources within the Area of Potential Effect (LOG NO. 2016.01289; DOC NO. 1706JLP23). The submittal included the RLS Inventory Forms, the Survey Report, and a map of the Survey Findings, and the State Historic Preservation Division (SHPD) received this submittal on August 23, 2017.

SHPD accepts the RLS reports and has received filing fees per §13-284-4(3), HAR.

Currently, the project scope of work has not been finalized, particularly the future disposition of the properties located on the 4 parcels (1 on the corner of N. Vineyard and Liliha, and 3 along N. King) that complete the Mayor Wright Homes block. Therefore, SHPD looks forward to continued consultation to provide complete and meaningful comment as to the effects the proposed project may have on historic properties within the APE.

Please contact Kaiwi Yoon, Architecture Branch Chief, at (808) 692-8032 or at Kaiwi.N.Yoon@hawaii.gov regarding architectural resources or this letter.

Aloha,

Alan Downer

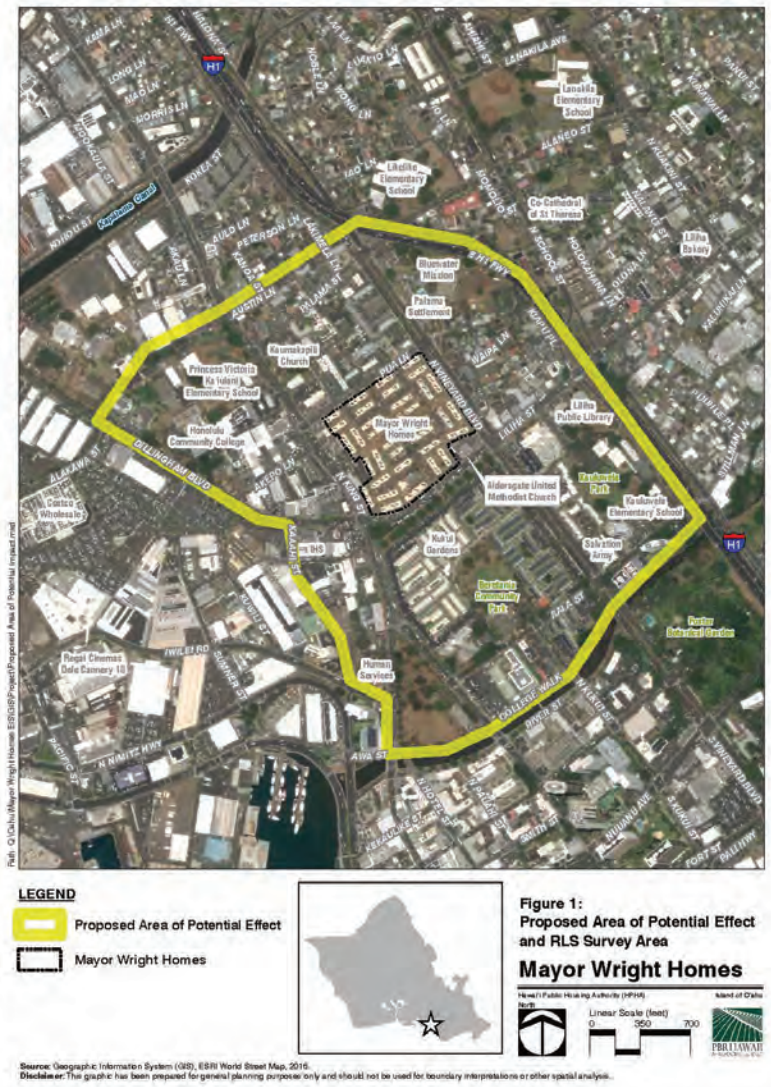
Architectural Reconnaissance Survey of Mayor Wright Housing APE

Research Design

This architectural reconnaissance survey was undertaken in anticipation of the future development of the Mayor Wright Homes Redevelopment project (Tax Map Key 1-7-029: 003). As a result of Hawaii Revised Statutes Chapter 6E and Section 106 consultation between the Hawaii State Historic Preservation Division (SHPD) and Hawaii Public Housing Authority (HPHA), a one- to one-and-a-half block radius surrounding the proposed project area was determined to be an appropriate Area of Potential Effect (APE) for any proposed undertaking. (See Figure 1: Proposed Area of Potential Effect and RLS Survey Area.) During initial stages of consultation, SHPD requested a reconnaissance level survey of architectural historic resources within the APE, in order to provide a baseline of information which will be useful in evaluating and assessing potential impacts to identified, eligible historic resources as a result of the proposed redevelopment project. The objective of the survey is to ascertain whether any possible historic properties are located in the APE, which encompasses Tax Map plats: 1-7-023, 1-7-026, 1-7-027, 1-7-029, 1-7-031, and 1-7-032, as well as 1-5-006, and portions of 1-5-005, 1-5-007, 1-5-017, and 1-6-001. No historic contexts were prepared as a part of this survey.

The survey followed a methodology which included performing background research, completing a site visit, gathering basic information on the buildings identified as significant, and writing up the results of the survey so any identified properties may be placed in the SHPD's Statewide Inventory of Historic Places.



Coverage and Methodology

The area surveyed encompasses approximately 100 acres. The survey examined all the properties within the APE built prior to 1977, with the exception of a handful of properties, which were inaccessible or not visible from the public right-of-way. Properties constructed between 1967 and 1977 were included in the survey due to the anticipated length of the project. Some properties that are not yet historic are anticipated to be eligible once they meet the 50 year requirement. In these cases surveyed, each of these properties do not currently meet the National Register criteria considerations that would render them exceptional; therefore, they are determined not eligible for listing until they meet the minimum age value of 50 years old. In these cases, the date the property will become historic and may be potentially eligible for listing to the State or National Registers of Historic Places is denoted on the reconnaissance level survey form, as well as identified in the compiled table summary of all surveyed properties in Appendix A.

Prior to the start of any fieldwork, background research was undertaken. The preliminary background research involved an examination of pertinent materials provided by the client. SHPD records disclosed the O.R. & L. Depot and Document Storage buildings, and Kaumakapili Church to be listed in the Hawaii or National Register of Historic Places. In addition, six properties are included in the Statewide Inventory of Historic Places. These are: the Izuma Taisha Mission, Aala Park, the Tong Fat Building and apartments, the Tamura Building on Kaaahi Street, the Palama Settlement, and the HPHA's Kalanihuia elderly housing project.

Don Hibbard, Alison Chiu, and Anna Broverman, all of whom meet the Secretary of Interior's Professional Qualifications Standards as an architectural historian, conducted field surveys on the morning of March 21, 2017, and on the afternoons of April 19, 2017, and May 16 and 18, 2017, examining all the buildings in the survey area. Approximately twelve hours were spent in the field photographing and taking notes on the physical character of the buildings within the study area. One hundred percent of the survey area was investigated. Following the site survey, additional research was undertaken at the Hawaii State Archives, City & County Tax Office, Department of Planning and Permitting, University of Hawaii, Department of Education, and Hawaii State Library. This included a review of tax records, newspaper articles, original drawings, and building permits. Following the gathering of information, this report was prepared, reviewed, and finalized. RLS inventory forms were completed for 161 properties.

Survey Results

Of the 161 properties examined in the course of the reconnaissance survey and included in this report, 2 are presently listed in either the Hawaii or National Registers of Historic Places. In addition, another 47 properties appear to meet the criteria for listing in the Hawaii and National Registers for their associations with the architectural traditions of Hawaii; of these properties, 6 are already identified in the Statewide Inventory of Historic Places. An additional 13 properties were determined potentially eligible once they meet the 50 year age requirement. The other 83 properties do not appear to meet the criteria for listing in either historic register because their historic integrity has been compromised. There are 4 properties that were determined ineligible as individual properties, but they are eligible as contributing features to a historic district. Unknown determinations were given to 13 properties not visible from the public right of way. (See Figure 2: Eligibility of Properties Surveyed.)

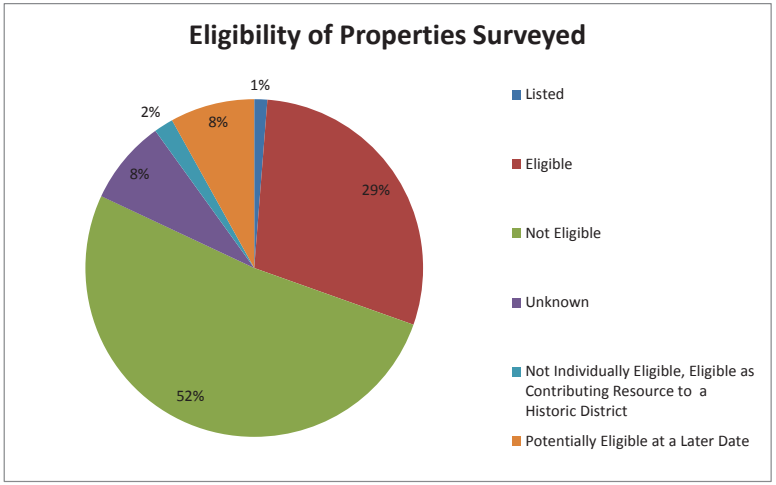


Figure 2: Eligibility of Properties Surveyed

Clusters of historic properties were found throughout the survey area. Five historic properties were found on the same block as the Mayor Wright Housing complex. Additional groupings of listed properties were found along the northeastern side of North Vineyard Boulevard, the southern side of Akepo Lane, the northern side of Liliha Street, and the southern end of North King Street. (See Figure 3: Survey Findings.)

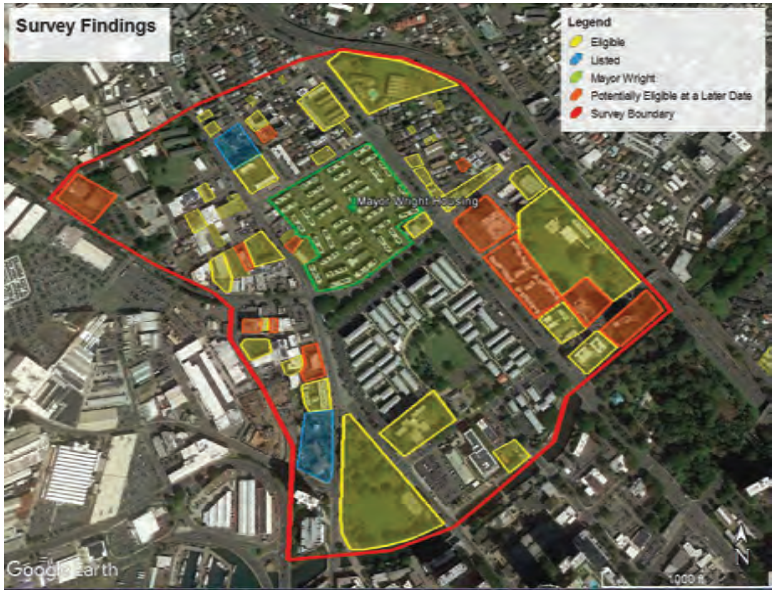

Figure 3: Survey Findings

Two possible historic districts were identified within the APE.

The first possible historic district runs *mauka* (northeast) along Liliha Street from Vineyard Boulevard. (See Figure 4: Potential Liliha Street Historic District.) This potential district would include HPL Company LLC's building at 1408 Liliha Street, the American Security Bank (now First Hawaiian Bank), Lung Kong Kung Shaw Society Hall, and Liliha Sunrise (TMKs: 1-7-032: 021, 022, 023, 099) – all of which are considered to individually meet the criteria for listing in the Hawaii and National Registers of Historic Places. In addition, the district might also include TMK 1-7-032: 020, as a contributing property, and could be extended *makai* (southwest) of Vineyard Boulevard to include the Agmata Building at 1386 Liliha designed by Ray Akagi (TMK: 1-7-029: 001), as a contributing property, and the Aldersgate United Methodist Church (TMK: 1-7-029: 002). The Aldersgate United Methodist Church is considered to individually meet the criteria for listing in the Hawaii and National Registers of Historic Places.

All of the structures identified in the potential Liliha Street Historic District were built between 1947–1962; they well reflect the design proclivities of the mid-century modern design period and thus the

potential district may be eligible under Criterion C. These buildings were identified in the *Hawaii Modernism Context Study* (2011) as an intact streetscape of low-rise retail buildings.

> *The block on Liliha Street between Vineyard and the entrance to the Lunalilo Freeway, with its wide array of modern forms, may be one of the few groupings of post-war low-rise commercial buildings to remain intact, and efforts should be exerted to retain this block of time.*[1]

The only other relatively intact commercial streetscapes of the mid-century modern period in Honolulu, which may be considered of comparable quality are in Kaimuki along Waialae Avenue and along Kapahulu Avenue.

Figure 4: Potential Liliha Street Historic District

[1] *Hawaii Modernism Context Study*, prepared for Historic Hawaii Foundation by Fung Associates, Inc. (November 2011): 4-6, 4-7.

The second possible historic district is the Kauluwela Redevelopment Area, which is bounded by Vineyard Boulevard and the Lunalilo Freeway, and Liliha Street and Nuuanu Stream. (See Figure 5: Potential Kauluwela Redevelopment Area Historic District.) This district well reflects the efforts of the Honolulu Redevelopment Agency (HRA) in the 1960s and 1970s, and therefore may be eligible under Criterion A and/or C. The HRA was formed in 1950 by the City and County of Honolulu Council to remedy slum and blight within the City and County. However, it did not have significant impact until after 1958 when federal Housing and Urban Development moneys were infused into the program. Under the HRA, the City and County and the federal government partnered to purchase and clear substandard areas and relocate the residents, with the federal government providing approximately 66% of the funds. The blighted areas were then resold to private developers who were required to build according to land use plans prescribed by the HRA.

Figure 5: Potential Kauluwela Redevelopment Area Historic District

As early as 1961, the HRA had designated Kauluwela as one of its redevelopment areas, as part of a 183 acre area which extended from Beretania Street to the Lunalilo Freeway and from Queen Emma Street to Liliha Street, and also included what is now Aala Park, an area which inspired and served as a setting for the 1954 film *Hell's Half Acre*. The HRA considered Kauluwela's thirty acre area to be beyond the point of redemption, containing 229 buildings of which 199 were deemed deficient. Nearly half of the 365 dwelling units were considered "substandard," with approximately 300 families and 150 single persons living in them. In addition, there were approximately fifty businesses.

HRA's first major project, Queen Emma Gardens, met with substantial public opposition because of an anticipated low quality of design, in part a result of the agency's recently completed Kokea Street project and earlier Hawaii Housing Authority projects following *Zeilenbau* configurations. Sensitive to public outcry, the HRA seemed to make a conscious effort to have higher design standards – this is well reflected in the Kauluwela project as well as others undertaken by the agency; HRA is responsible for some of the best designed housing projects in Hawaii during this period.

The HRA's Yamasaki designed Queen Emma Gardens project was completed in 1964, and the Caesar Pelli designed Kukui Gardens project was to finally break ground in February 1969, after approximately six years had elapsed since the clearing of the area. With the latter, a seventy five acre redevelopment project, about to be underway, the HRA turned its attention to moving Kauluwela toward completion. Land acquisition and relocation had been underway since June 1966, and by June 1967 all but one parcel was under HRA ownership. In June 1968 the HRA secured loan agreements from Continental Illinois National Bank and Trust Company and First Boston Corporation, and proceeded to start clearing and grading the site. It was anticipated this would be completed by June 1969, when the final relocations would be completed. The agency sold eight acres of these lands to be redeveloped to the Hawaii Council for Housing Action (HCHA), whose proposal for Kukui Gardens had come in second to the Clarence T. C. Ching Foundation's winning proposal. The HCHA would develop Liliha Square, Kauluwela I and II, and an elderly housing high rise, the present Keola Hoonanea. As in the past, the project designs were untaken by architects with established reputations. Geoffrey Fairfax, who worked in William Wurster's office in California prior to opening his own firm in 1967, had worked in Hawaii on the restoration of Iolani Palace and Grove Farm Homestead prior to undertaking Liliha Square, while San Francisco architect Leo S. Wou, who designed Kauluwela I and II, also designed the award winning Financial Plaza in downtown Honolulu. Frank Slavsky, the architect for the elderly housing component of the project, had already won an AIA award for Makua Alii, the elderly housing apartment he designed in 1967 for the Hawaii Housing Authority on Kalakaua Avenue. In addition to these projects, the HRA elected to retain the Liliha Library designed by Stephen Oyakawa, the apartments *makai* of the library built in 1947 and designed by George McLaughlin, and the Salvation Army building designed by Alfred Yee. They also retained and expanded Kauluwela Elementary School and playground, which occupied a preponderance of the redevelopment area. In addition the agency sold to the Aloha United Fund the corner lot at Aala Street and Vineyard Boulevard, where this non-profit had Leo S. Wou design their headquarters building. Also, the HRA cooperated with the State Parks Division, who envisioned a hiking trail the length of Nuuanu Stream, by making a landscaped promenade between King Street and the Lunalilo Freeway, which was designed by George Walters. It was the largest landscape project undertaken by the HRA.

In addition to these projects, the HRA was also responsible for the aborted attempt to redevelop Chinatown, the Cultural Plaza and the Pauahi and Kukui tower projects. In November 1974, the agency was absorbed into the City and County of Honolulu's Department of Housing and Community Development. The buildings in the Kauluwela area represent the apex of the agency's activity, with the buildings dating from 1969 to 1975. The buildings which were retained by the HRA all date from the post-war period and are consistent in design with those developed under the HRA.

Recommendations for Future Study

This survey was completed at the request of the Hawaii State Historic Preservation Division under Hawaii Revised Statutes Chapter 6E-8 and in anticipation of Section 106 of the National Historic Preservation Act consultation. The review processes are designed to identify significant historic properties in project areas/APEs and to develop and execute plans to handle impacts to significant historic properties. The survey supports the historic preservation review process by providing baseline information about historic properties within the APE and identifying potential effects that may be caused by a project.

This architectural reconnaissance survey included properties within a one-and-a-half block radius of the Mayor Wright housing development built prior to 1977. The survey area encompassed approximately 100 acres and was bounded by the H1 Freeway to the northeast, College Walk and Nuuanu Stream to the southeast, Dillingham Boulevard and Kaaahi Streets to the southwest, and Austin Lane to the northwest. In addition to two potential historic districts, individual historic properties were found throughout the survey area. The large survey boundary was meant to include all architectural properties that could be affected by the redevelopment project in the absence of a final design. The effects of the redevelopment project will have to be assessed once a design is decided upon.

The following recommendations are given to facilitate state and federal review processes, but are not necessarily included in the scope of this survey or redevelopment project.

- A historic context for the Palama neighborhood should be completed to understand how the existing built environment reflects the development of Palama in the late nineteenth throughout twentieth centuries. The context would confirm significance determinations for historic properties found in the RLS and help the community, project proponents, and government reviewers understand any potential impacts the proposed redevelopment project would have.
- A historic context documenting urban renewal in Palama. The report would include efforts by the Honolulu Redevelopment Agency to procure land in the area, the role of private developers in the redevelopment, and how the redevelopment of Palama related to other redevelopment efforts in downtown Honolulu. The report would include information about the Mayor Wright housing development, Kukui Gardens, Kauluwela Apartments 1 and 2, Kalaniuhia, College Walk, Liliha Library, and Kauluwela Elementary.
- Thematic study of community organizations, such as the On Tong Society, in Palama
- Future study for the Honolulu Redevelopment Agency

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

Palama Settlement consists of six buildings and a pool on approximately 6 acres bounded by the H-1 freeway to the north, Palama St. to the northwest, N. Vineyard Street to the southwest, and a residential neighborhood to the south and east. Buildings are clustered along the western and southern sides of the property, an expansive lawn and parking characterize the eastern and northern sides.

Three of the existing buildings and the pool date from the campus' construction in 1925. These early two story buildings are characterized by raised foundations, use of horizontal and vertical wood siding, full height porticos, and multipane double hung windows. A modern style gymnasium, auxillary building, and community meeting buildings were constructed in in the late 1960s.

Architectural Description

This concrete block building houses a restaurant on the first story and residential units above. It sits at the intersection of Vineyard Boulevard and Liliha Street, and is characterized by its rounded corner.

The base of the L-shaped building runs parallel to Liliha and is two stories, while the more *mauka* (mountain facing), long side is three, with the courtyard formed by the L used for parking.

It has a flat roof with shallow overhanging eaves, and similarly shallow canopies above the first and second stories. The restaurant is entered from two sets of aluminum double doors along Liliha Street, and it features three single pane display windows, each with a set of three jalousie window transoms above. The upper stories have jalousie windows in pairs and sets of three.

On the parking lot side, on the first story a single aluminum door enters the restaurant, and in the long wing is a store with a door and two display windows. A projecting, dogleg set of concrete steps with a shed roof accesses the second story above the restaurant, and a similar set of steps at the end of the *mauka* (mountain facing) wing provides access to the units in this wing. These unit's rear lanai overlook the parking lot and have a solid CMU balustrade. Aluminum sliding doors open on these lanai and CMU partion walls provide each unit's lanai with privacy.

This building is a contributing feature to the potential Liliha Street Commercial Historic District.

Architectural Description

The three story commercial-residential complex at 1436 Liliha (1963), designed by Walter Wong, features a metal screened upper two stories and split-faced, brick-sized, concrete block storefronts on the first story. In the rear is a parking lot bordered by apartments on three sides. The balustrades of the apartments' lanai/walkway are embellished by decorative blocks and split-faced, brick-sized, concrete block.

This building is a contributing feature to the potential Liliha Street Commercial Historic District.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

This three story Chinese society hall is characterized by its heavily framed second story windows and reinforced concrete left side corner, poured to resemble clapboard siding. It has three store fronts on the first story, each with a single aluminum frame door and a display window. Horizontal wood louvers serve as a transom running across each store front. The upper story windows are not all original.

The Lung Kong Kung Shaw Society, Honolulu Chapter was organized in 1919, and is comprised of members with the surnames of Lau, Quon, Chong, and Chu.

X. Continuation Sheet

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

Rendered in an inspired moderne manner, this two-story concrete building is eight bays long, with each bay demarcated by ground to roof fin. The first story is recessed behind the second, and the third bay from the right has a projecting pylon which accommodates the vertical circulation. On the ground floor the two bays to the right of the pylon accommodate the ATM machine, while the two bays to the left provide entry to the building with their aluminum double doors. A bank of quadruple stacked single pane windows runs across the second story. The lowest and third windows are larger and fixed, and the smaller are inward opening hopper. Thin fins separate one set of windows in the bank from the next. There is a parking lot in the rear.

This building is a contributing feature to the potential Liliha Street Commercial Historic District.

Please use this sheet those that follow to attach additional information about the site; including, but not limited to additional floor plans, drawings, photographs, maps, etc.

Architectural Description

Referred to as “modified Chinese” in style by the newspapers of the time, the Buck Toy Association building engages attention with its varied textures and Chinese elements. The green-tiled, flared, hipped gablet roof, red moongate entrance with symbols of longevity, and patterned red window muntins proclaim the Chinese heritage of this fraternal society. Beyond the Chinese ornamentation, the contrasting textures and colors of the smooth white reinforced concrete walls with red brick kick panels, gray cast stone, and Roman brick veneer add another dimension of visual enticement to the building. As in other urban society halls, the first story is devoted to commercial space and the second story is for the use of society members. The Buck Toy Association is composed of families whose ancestors immigrated to Hawaii from the village of Buck Toy in China’s Chungshan district.

Architectural Description

This three story, L-shaped condominium has CMU block walls, and a flat roof with overhanging eaves. The courtyard formed by the two wings of the L is devoted to paved, uncovered parking. The sides facing the parking lot are characterized by lanai/walkway with metal railings. Doors to the apartments, as well as jalousie windows front on the lanai/walkway. Projecting concrete, dogleg steps at end of each wing provide access to the upper stories. This condominium contains 18 one bedroom units.
